PROSPECTUS

June 29, 2020

- Each Fund intends to invest substantially all of its assets in FLEXible EXchange® Options (“FLEX Options”) on the S&P 500 Price Index or an ETF that tracks the S&P 500 Price Index. FLEX Options are customizable exchange-traded option contracts guaranteed for settlement by the Options Clearing Corporation. The Funds use FLEX Options to employ a “structured outcome strategy.” Structured outcome strategies seek to produce pre-determined investment outcomes based upon the performance of an underlying security or index. The pre-determined outcomes sought by the Funds, which include the buffer discussed below, are based upon the performance of the S&P 500 Price Index or an ETF over a 12-month period beginning on a specified day (each, a “Roll Date”). The period from one Roll Date to the next Roll Date is referred to as the “Investment Period,” and the first day of the Investment Period is referred to as the “Initial Investment Day.” **The Funds will not terminate after the conclusion of their respective Investment Period. After the conclusion of an Investment Period, another will begin. There is no guarantee that the outcomes for an Investment Period will be realized.**

- Each Fund’s strategy has been structured to produce an outcome based upon the S&P 500 Price Index or an ETF’s returns over the duration of the Investment Period. The outcome may only be realized if you are holding shares on the first day of the Investment Period and continue to hold them on the last day of the Investment Period. **If you purchase shares after the Investment Period has begun or sell shares prior to the Investment Period’s conclusion, you may experience investment returns very different from those that the respective Fund seeks to provide. There is no guarantee that a Fund will successfully achieve its investment objective.**

- Each Fund only seeks to provide shareholders that hold shares for the entire Investment Period with a buffer against the first 8%-12% of S&P 500 Price Index losses (based upon the value of the S&P 500 Price Index at the time the Fund entered into the FLEX Options (or standard exchange-listed options) on the first day of the Investment Period) during the Investment Period. You will bear all S&P 500 Price Index losses exceeding 8%-12% on a one-to-one basis. The buffer is provided prior to taking into account annual Fund management fees equal to 0.79% of a Fund’s daily net assets, transaction fees and any extraordinary expenses incurred by the Fund. A shareholder that purchases shares at the beginning of the Investment Period may lose their entire investment. While each Fund seeks to limit losses for shareholders who hold shares for the entire Investment Period, there is no guarantee it will successfully do so.

Depending upon market conditions at the time of purchase, a shareholder that purchases shares after the Investment Period has begun may also lose their entire investment. For instance, if the Investment Period has begun and a Fund has decreased in value beyond the pre-determined 8%-12% buffer, an investor purchasing shares of the Fund at that price may not benefit from the buffer. Similarly, if the Investment Period has begun and a Fund has increased in value, an investor purchasing shares of the Fund at that price may not benefit from the buffer until the Fund’s value has decreased to its value at the commencement of the Investment Period. An investment in a Fund is only appropriate for shareholders willing to bear those losses.

- A Fund’s outcome is based on the Fund’s net asset value (“NAV”), the per share value of the Fund’s assets on the first day of the Investment Period. A Fund’s assets will be principally composed of FLEX Options (or standardized exchange-listed options), the values of which are derived from the performance of the underlying reference asset, the S&P 500 Price Index. However, because a component of an option’s value is the number of days remaining until its expiration, a Fund’s NAV will not

directly correlate on a day-to-day basis with the returns experienced by the S&P 500 Price Index. While each Fund's investment adviser and sub-adviser generally anticipate that the Fund's NAV will move in the same direction as the S&P 500 Price Index (meaning that the Fund's NAV will increase if the S&P 500 Price Index experiences gains and that the Fund's NAV will decrease if the S&P 500 Price Index experiences losses), the Fund's NAV may not increase or decrease at the same rate as the S&P 500 Price Index. Similarly, the amount of time remaining until the end of the Investment Period also affects the impact of the buffer on a Fund's NAV, which may not be in full effect prior to the end of the Investment Period. **Each Fund's strategy is designed to produce an outcome upon the expiration of the options on the last day of the Investment Period. It should not be expected that such outcome will be provided at any point prior to that time and there is no guarantee that the outcome will be achieved on the last day of the Investment Period.**

- The Funds' website, www.true-shares.com, provides important Fund information (including Investment Period start and end dates as well as information on the buffer), as well as information relating to the potential outcome of an investment in each Fund on a daily basis. **If you are contemplating purchasing shares, please visit the website. Investors considering purchasing shares after the Investment Period has begun or selling shares prior to the end of the Investment Period should visit the website to fully understand potential investment outcomes.**

- As stated above and explained in greater detail within this Prospectus, if a Fund has experienced certain levels of either gains or losses since the beginning of the Investment Period, there may be little to no ability to achieve gains or benefit from the buffer for the remainder of the Investment Period. The Funds' website contains important information that will assist you in determining whether to buy shares.

- Although each Fund's shares are listed for trading on a national securities exchange, there can be no assurance that an active trading market for the shares will develop or be maintained.

Although each Fund seeks to achieve its investment objective, there is no guarantee that it will do so. The returns that a Fund seeks to provide does not include the costs associated with purchasing shares of the Fund and certain expenses incurred by the Fund. The Funds have characteristics unlike many other traditional investment products and may not be suitable for all investors. The following page provides considerations for determining whether an investment in a Fund is appropriate for you.

You should only consider this investment if:

- you fully understand the risks inherent in an investment in a Fund;
- you desire to invest in a product with a return that depends upon the performance of the S&P 500 Price Index over the Investment Period;
- you are willing to hold shares for the duration of the Investment Period in order to achieve the returns that a Fund seeks to provide;
- you fully understand that investments made in between Roll Dates may have limited to no upside;
- you seek the protection of a 8% to 12% Buffer on S&P 500 Price Index losses for an investment held for the duration of the entire Investment Period and understand that there is no guarantee that a Fund will be successful in its attempt to provide protection through the Buffer;
- you understand that a Fund's investments do not provide for dividends to the Fund;
- you fully understand that investments made after the Investment Period has begun may not fully benefit from the Buffer;
- you are willing to accept the risk of losing your entire investment; and
- you have visited the Funds' website and understand the investment outcomes available to you based upon the timing of your purchase.

You should not consider this investment if:

- you do not fully understand the risks inherent in an investment in a Fund;
- you do not desire to invest in a product with a return that depends upon the performance of the S&P 500 Price Index over the Investment Period;
- you are unwilling to hold shares for the duration of the Investment Period in order to achieve the returns that a Fund seeks to provide;
- you do not fully understand that investments made between Roll Dates (as defined in this Prospectus) may have limited to no upside;
- you seek an investment that provides total protection against S&P 500 Price Index losses for an investment held for the duration of an Investment Period;
- you do not fully understand that a Fund's investments do not provide for dividends to the Fund;
- you do not fully understand that investments made after the Investment Period has begun may not fully benefit from the Buffer (as defined in this Prospectus);
- you are unwilling to accept the risk of losing your entire investment; and
- you have not visited the Funds' website and do not understand the investment outcomes available to you based upon the timing of your purchase.

Beginning on January 1, 2021, as permitted by regulations adopted by the SEC, paper copies of the Funds' shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the Funds' reports from your financial intermediary, such as a broker-dealer or bank. Instead, the reports will be made available on a website, and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. Please contact your financial intermediary to elect to receive shareholder reports and other Fund communications electronically.

You may elect to receive all future Fund reports in paper free of charge. Please contact your financial intermediary to inform them that you wish to continue receiving paper copies of Fund shareholder reports and for details about whether your election to receive reports in paper will apply to all funds held with your financial intermediary.

The U.S. Securities and Exchange Commission ("SEC") has not approved or disapproved of these securities or passed upon the accuracy or adequacy of this Prospectus. Any representation to the contrary is a criminal offense.

TRUESHARES STRUCTURED OUTCOME (JANUARY) ETF

Investment Objective

The Fund seeks to provide investors with returns (before fees and expenses) that track those of the S&P 500 Price Return Index (the “S&P 500 Price Index”) while seeking to provide a buffer against the first 8% to 12% of S&P 500 Price Index losses, over the period from January 1, 2021 to December 31, 2021.

Fees and Expenses of the Fund

This table describes the fees and expenses that you may pay if you buy, hold or sell shares of the Fund (“Shares”). This table and the Example below do not include the brokerage commissions that investors may pay on their purchases and sales of Shares.

Shareholder Fees <i>(fees paid directly from your investment)</i>	None
Annual Fund Operating Expenses <i>(expenses that you pay each year as a percentage of the value of your investment)</i>	
Management Fees	0.79%
Distribution and/or Service (12b-1) Fees	0.00%
Other Expenses *	0.00%
Total Annual Fund Operating Expenses	0.79%

* Estimated for the current fiscal year.

Example

This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. The Example assumes that you invest \$10,000 in the Fund for the time periods indicated and then redeem all of your Shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the Fund’s operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

1 Year: \$81

3 Years: \$252

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Shares are held in a taxable account. These costs, which are not reflected in the Annual Fund Operating Expenses or in the Example, affect the Fund’s performance. Because the Fund is newly organized, portfolio turnover information is not yet available.

Principal Investment Strategy

The Fund is an actively-managed exchange-traded fund (“ETF”) that seeks to achieve its investment objective by investing substantially all of its assets in options that reference the S&P 500 Price Index. The Fund’s investment adviser, TrueMark Investments, LLC (“TrueMark”), and sub-adviser, SpiderRock Advisors, LLC (“SpiderRock”), will employ a “buffer protect” options strategy that uses such options to seek to achieve exposure to the S&P 500 Price Index while mitigating the first 8% to 12% decline in the S&P 500 Price Index (the “Buffer”) over a 12-month period beginning on a specified day each January (each, a “Roll Date”). The period from one Roll Date to the next Roll Date is referred to as the “Investment Period,” and the first day of the Investment Period is referred to as the “Initial Investment Day”).

The Fund will purchase call options and sell (write) put options on the S&P 500 Price Index or an ETF that tracks the S&P 500 Price Index on each Initial Investment Day with an expiration on the next Roll Date. An option gives the purchaser of the option the right to purchase (for a call option) or sell (for a put option) the underlying asset (or deliver cash equal to the value of an underlying index) at a specified price (“strike price”). In the event the underlying asset declines in value, the value of a put option will generally increase (and the value of a call option will generally decrease and may end up worthless), and in the event the underlying asset appreciates in value, the value of a put option will generally decrease and may end up worthless (and the value of a call option will generally increase).

On each Initial Investment Day, the Fund will sell (write) put options on the S&P 500 Price Index or an ETF that tracks the S&P 500 Price Index with a strike price within a range of approximately 8% to 12% lower than the current value of the S&P 500 Price Index or an ETF that tracks the S&P 500 Price Index. As the seller of these options, the Fund receives a premium from the buyer of the options, which the Fund invests in at-the-money call options on the S&P 500 Price Index or an ETF that tracks the S&P 500 Price Index (*i.e.*, call options having a strike price roughly equal to the current value of the S&P 500 Price Index or an ETF that tracks the S&P 500 Price Index). The relative price of the put options sold (written) by the Fund to the price of the call options purchased by the Fund will determine

the Fund's exposure to the S&P 500 Price Index during the Investment Period. **Due to the cost of the options used by the Fund, the correlation of the Fund's performance to that of the S&P 500 Price Index is expected to be less than if the Fund invested directly in the S&P 500 Price Index without using options, and could be substantially less.** This means that if the S&P 500 Price Index experiences gains for an Investment Period, the Fund may not realize gains to the same extent.

The Fund's strategy is to seek to protect investors from a decline of up to 8% to 12% in the performance of the S&P 500 Price Index from one Roll Date to the next Roll Date. When the Adviser or Sub-Adviser sells puts on the S&P 500 Price Index to create the buffer range, the proceeds are used to purchase calls at the money. However, not all puts generate the same premium relative to the downside exposure of the Fund. The Adviser will seek to deliver a buffer of 10% from the reference price of the S&P 500 Price Index on the first trading day of the month. However, the market could fluctuate on or after the buffer is set and this range allows for market condition volatility. **The Fund is not designed to protect against declines of more than 8% to 12% in the level of the S&P 500 Price Index, and there can be no guarantee that the Fund will be successful in implementing the buffer protect options strategy to avoid the first 8% to 12% decline.** Additionally, even if the Fund mitigates a decline in the performance of the S&P 500 Price Index from one Roll Date to the next Roll Date, the Fund's returns during the Investment Period (prior to the next Roll Date) may not reflect the buffer protect options strategy.

The Fund will invest in standardized exchange-listed options or in exchange-traded FLEXible EXchange Options ("FLEX Options"), which are customized exchange-traded option contracts available through the Chicago Board Option Exchange ("Cboe") that are guaranteed for settlement by The Options Clearing Corporation ("OCC"). FLEX Options provide investors with the ability to customize exercise prices, exercise styles, and expiration dates, while achieving price discovery in competitive, transparent, auction markets and avoiding the counterparty exposure of over-the-counter ("OTC") options positions. All FLEX Options in the Fund are European-style options (*i.e.*, they can only be exercised at the expiration date of the option) based on the S&P 500 Price Index or an ETF that tracks the S&P 500 Price Index and have an expiration date that is the last day of the Investment Period. In general, the Fund intends to invest in FLEX options only, as these options provide the best combination of OCC guarantees, price discovery, customization, and European-style settlement that is ideal for the Fund. However in certain unforeseen circumstances, listed options may be used by the Fund to provide an additional source of desired market exposure. The Fund also expects to invest in U.S. Treasury bonds.

The Fund is designed to provide the following outcomes during each individual Investment Period:

Change in the Returns of the S&P 500 Price Index	Expected Change in the Returns of the Fund
Declines between -8% and -12% (or more)	Declines 8% to 12% percentage points less than the S&P 500 Price Index (<i>e.g.</i> , if the S&P 500 Price Index returns -35%, the Fund is designed to return -23% to -27%)
Declines between 0% and -8%	No change
Appreciates	The Fund's returns will appreciate to a similar extent as the S&P 500 Price Index, but will be less than those of the S&P 500 Price Index due to the cost of the options used by the Fund

The following charts illustrate the hypothetical returns that the Fund seeks to provide in certain illustrative scenarios for a shareholder that purchases Fund shares on the Initial Investment Day and holds such shares for the entire Investment Period. These charts do not take into account payment by the Fund of fees and expenses and assume a buffer of 10%. **There is no guarantee that the Fund will be successful in providing these investment outcomes for any Investment Period.**

The Fund includes a mix of purchased and written (sold) put and call options structured to achieve the results described above. The Fund is designed to seek to achieve the results described above for investments made on the Initial Investment Day and held until the last day of the Investment Period. **Investments made on any day other than the Initial Investment Day may differ significantly, positively or negatively, from the results described above.** The Fund's website, www.true-shares.com, contains information about the Fund's holdings, and the level of the S&P 500 Price Index as of the Initial Investment Day and the prior business day to assist an investor in understanding and the range of results such investor can expect for investments made at times other than on the Initial Investment Day.

Additionally, the Fund's website provides information relating to the returns of the Fund, including the Fund's Buffer and its position relative to the S&P 500 Price Index on a daily basis.

The Fund's operations are intended to be continuous. It will not terminate and distribute its assets at the conclusion of each Investment Period. On each Roll Date, another Investment Period will commence and the Fund will invest in a new set of options.

The Fund is classified as "non-diversified" under the Investment Company Act of 1940, as amended (the "1940 Act").

Principal Investment Risks

The principal risks of investing in the Fund are summarized below. The principal risks are presented in alphabetical order to facilitate finding particular risks and comparing them with those of other funds. Each risk summarized below is considered a "principal risk" of investing in the Fund, regardless of the order in which it appears. As with any investment, there is a risk that you could lose all or a portion of your investment in the Fund. Some or all of these risks may adversely affect the Fund's net asset value per share ("NAV"), trading price, yield, total return and/or ability to meet its objectives.

- **Buffered Strategy Investment Risk.**

- *Buffered Loss Risk.* There can be no guarantee that the Fund will be successful in its strategy to provide buffer protection against S&P 500 Price Index losses if the S&P 500 Price Index decreases over the Investment Period by 8% or less. A shareholder may lose their entire investment. The Fund's strategy seeks to deliver returns that match the S&P 500 Price Index (but will be less than the S&P 500 Price Index due to the cost of the options used by the Fund), while limiting downside losses, if Shares are bought on the day on which the Fund enters into the options and held until those options expire at the end of each Investment Period. In the event an investor purchases Shares after the date on which the options were entered into or sells Shares prior to the expiration of the options, the buffer that the Fund seeks to provide may not be available. The Fund does not provide principal protection and an investor may experience significant losses on its investment, including the loss of its entire investment.
- *FLEX Options Risk.* The Fund may invest in FLEX Options issued and guaranteed for settlement by the OCC. The Fund bears the risk that the OCC will be unable or unwilling to perform its obligations under the FLEX Options contracts. Additionally, FLEX Options may be illiquid, and in such cases, the Fund may have difficulty closing out certain FLEX Options positions at desired times and prices.
- *Options Risk.* The Fund invests in options that derive their performance from the performance of the S&P 500 Price Index. Writing and buying options are speculative activities and entail investment exposures that are greater than their cost would suggest, meaning that a small investment in an option could have a substantial impact on the performance of the Fund. The Fund's use of call and put options can lead to losses because of adverse movements in the price or value of the underlying stock, index, or other asset, which may be magnified by certain features of the options. These risks are heightened when the Fund's portfolio managers use options to enhance the Fund's return or as a substitute for a position or security. When selling a call or put option, the Fund will receive a premium; however, this premium may not be enough to offset a loss incurred by the Fund if the price of the underlying asset is above or below, respectively, the strike price by an amount equal to or greater than the premium. The value of an option may be adversely affected if the market for the option becomes less liquid or smaller, and will be affected by changes in the value or yield of the option's underlying asset, an increase in interest rates, a change in the actual or perceived volatility of the stock market or the underlying asset and the remaining time to expiration. Additionally, the value of an option does not increase or decrease at the same rate as the underlying asset(s). The Fund's use of options, due to the cost of the options, will reduce the Fund's ability to get returns equal to the S&P 500 Price Index. This means that if the S&P 500 Price Index experiences gains for an Investment Period, the Fund will not benefit to the same extent from those gains. In addition, if the price of the underlying asset of an option is above the strike price of a written call option or below the strike price for a written put option, the value of the option, and consequently of the Fund, may decline significantly more than if the Fund invested directly in the underlying asset instead of using options. The Fund invests in options that derive their performance from the performance of the S&P 500 Price Index and can be volatile and involve various types and degrees of risks. The Fund could experience a loss if its options do not perform as anticipated, or are not correlated with the performance of their underlying stock or if the Fund is unable to purchase or liquidate a position because of an illiquid secondary market.
- *Purchase and Sale Timing Risk.* The Fund is designed to protect against the first 8% to 12% decline in the value of the S&P 500 Price Index and provide for participation in any gains, although not to the same extent, as the value of the S&P 500 Price Index, for a 12-month period from one Roll Date to the next Roll Date. Because the options purchased and written by the Fund will expire on the next Roll Date, if you purchase or sell Shares on a date other than a Roll Date or if you hold Shares for more or less than the time from the most recent Roll Date to the next Roll Date, the value of your investment in Shares may not be protected against the first 8% to 12% decline in the value of the S&P 500 Price Index and may not participate in a gain in the value of the S&P 500 Price Index for your investment period. The value of the options purchased and written by the Fund is dependent on, among other factors, the value, implied volatility, and implied dividend rate of the S&P 500 Price Index and interest rates, any or all of which may vary, sometimes significantly, during the period from the most recent Roll Date to the next Roll Date. Consequently, the value of the Fund may not directly track changes in the value of the S&P 500 Price Index in between Roll Dates.

- **Equity Market Risk.** The Fund invests in options that derive their performance from the S&P 500 Price Index, which is made up of common stocks. Common stocks are susceptible to general stock market fluctuations and to volatile increases and decreases in value as market confidence in and perceptions of their issuers change. These investor perceptions are based on various and unpredictable factors including: expectations regarding government, economic, monetary and fiscal policies; inflation and interest rates; economic expansion or contraction; and global or regional political, economic and banking crises.
- **ETF Risks.** The Fund is an ETF and, as a result of this structure, it is exposed to the following risks:
 - *Authorized Participants (“APs”), Market Makers, and Liquidity Providers Concentration Risk.* The Fund has a limited number of financial institutions that may act as APs. In addition, there may be a limited number of market makers and/or liquidity providers in the marketplace. To the extent either of the following events occur, Shares may trade at a material discount to NAV and possibly face delisting: (i) APs exit the business or otherwise become unable to process creation and/or redemption orders and no other APs step forward to perform these services, or (ii) market makers and/or liquidity providers exit the business or significantly reduce their business activities and no other entities step forward to perform their functions.
 - *Costs of Buying or Selling Shares.* Due to the costs of buying or selling Shares, including brokerage commissions imposed by brokers and bid/ask spreads, frequent trading of Shares may significantly reduce investment results and an investment in Shares may not be advisable for investors who anticipate regularly making small investments.
 - *Shares May Trade at Prices Other Than NAV.* As with all ETFs, Shares may be bought and sold in the secondary market at market prices. Although it is expected that the market price of Shares will approximate the Fund’s NAV, there may be times when the market price of Shares is more than the NAV intra-day (premium) or less than the NAV intra-day (discount) due to supply and demand of Shares or during periods of market volatility. This risk is heightened in times of market volatility, periods of steep market declines, and periods when there is limited trading activity for Shares in the secondary market, in which case such premiums or discounts may be significant.
 - *Trading.* Although Shares are listed for trading on the Cboe BZX Exchange, Inc. (the “Exchange”) and may be traded on U.S. exchanges other than the Exchange, there can be no assurance that Shares will trade with any volume, or at all, on any stock exchange. In stressed market conditions, the liquidity of Shares may begin to mirror the liquidity of the Fund’s underlying portfolio holdings, which can be significantly less liquid than Shares.
- **Management Risk.** The Fund is actively-managed and may not meet its investment objective based on the investment adviser’s and sub-adviser’s success or failure to implement investment strategies for the Fund.
- **New Fund Risk.** The Fund is a recently organized, non-diversified management investment company with no operating history. As a result, prospective investors have no track record or history on which to base their investment decision.
- **Non-Diversification Risk.** Although the Fund may invest in a variety of securities and instruments, the Fund will be considered to be non-diversified, which means that it may invest more of its assets in the securities of a single issuer or a smaller number of issuers than if it were a diversified fund. As a result, the Fund may be more exposed to the risks associated with and developments affecting an individual issuer or a smaller number of issuers than a fund that invests more widely. This may increase the Fund’s volatility and cause the performance of a relatively smaller number of issuers to have a greater impact on the Fund’s performance. However, the Fund intends to satisfy the asset diversification requirements for qualifying as a regulated investment company (“RIC”) under Subchapter M of the Internal Revenue Code of 1986, as amended (the “Code”).
- **Portfolio Turnover Risk.** Because the Fund may “turn over” some or all of its options as frequently as monthly, the Fund may incur high levels of transaction costs from commissions or mark-ups in the bid/offer spread. Higher portfolio turnover may result in the Fund paying higher levels of transaction costs and generating greater tax liabilities for shareholders. Portfolio turnover risk may cause the Fund’s performance to be less than you expect. While the turnover of the call options is not deemed “portfolio turnover” for accounting purposes, the economic impact to the Fund is similar to what could occur if the Fund experienced high portfolio turnover (e.g., in excess of 100% per year).
- **Tax Efficiency Risk.** A significant portion of income received from the Fund may be subject to tax at effective tax rates that are higher than the rates that would apply if the Fund were to engage in a different investment strategy. Additionally, the Fund’s investment strategy may require it to effect redemptions, in whole or in part, for cash. As a result, the Fund may be required to sell portfolio securities to obtain the cash needed to distribute redemption proceeds. This may cause the Fund to recognize investment income and/or capital gains or losses that it might not have recognized if it had completely satisfied the redemption in-kind. As a result, the Fund may be less tax efficient if it includes such a cash payment than if the in-kind redemption process was used exclusively. In addition, cash redemptions may incur higher brokerage costs than in-kind redemptions and these added costs may be borne by the Fund and negatively impact Fund performance. You should consult your tax advisor as to the tax consequences of purchasing, owning, and selling Shares.
- **U.S. Treasury Obligations Risk.** U.S. Treasury obligations may differ from other fixed income securities in their interest rates, maturities, times of issuance and other characteristics. Similar to other issuers, changes to the financial condition or credit rating of the U.S. government may cause the value of the Fund’s U.S. Treasury obligations to decline.

Performance

The Fund is new and therefore does not have a performance history for a full calendar year. In the future, performance information for the Fund will be presented in this section. Updated performance information is available on the Fund's website at www.true-shares.com or by calling the Fund toll free at 1-800-617-0004.

Management

Investment Adviser

TrueMark Investments, LLC serves as investment adviser to the Fund.

Sub-Adviser

SpiderRock Advisors, LLC serves as investment sub-adviser to the Fund

Portfolio Managers

Jordan C. Waldrep, CFA, Chief Investment Officer for the Adviser, Eric Metz, Chief Investment Officer for the Sub-Adviser and Fred Sloneker, Portfolio Manager for the Sub-Adviser, have been portfolio managers of the Fund since its inception in 2020.

Purchase and Sale of Shares

Shares are listed on the Exchange, and most investors will buy and sell Shares through brokers at market prices, rather than NAV. Because Shares trade at market prices rather than NAV, Shares may trade at a price greater than NAV (premium) or less than NAV (discount). The Fund issues and redeems Shares at NAV only in large blocks known as "Creation Units," which only APs (typically, broker-dealers) may purchase or redeem. Creation Units of the Fund generally consist of at least 25,000 Shares, though this may change from time to time. The Fund generally issues and redeems Creation Units in exchange for a portfolio of securities closely approximating the holdings of the Fund (the "Deposit Securities") and/or a designated amount of cash.

Tax Information

Fund distributions are generally taxable as ordinary income, qualified dividend income, or capital gains (or a combination), unless your investment is in an individual retirement account ("IRA") or other tax-advantaged account. Distributions on investments made through tax-deferred arrangements may be taxed later upon withdrawal of assets from those accounts.

Financial Intermediary Compensation

If you purchase Shares through a broker-dealer or other financial intermediary (such as a bank) (an "Intermediary"), the Adviser or its affiliates may pay Intermediaries for certain activities related to the Fund, including participation in activities that are designed to make Intermediaries more knowledgeable about exchange traded products, including the Fund, or for other activities, such as marketing, educational training or other initiatives related to the sale or promotion of Shares. These payments may create a conflict of interest by influencing the Intermediary and your salesperson to recommend the Fund over another investment. Any such arrangements do not result in increased Fund expenses. Ask your salesperson or visit the Intermediary's website for more information.

TRUESHARES STRUCTURED OUTCOME (FEBRUARY) ETF

Investment Objective

The Fund seeks to provide investors with returns (before fees and expenses) that track those of the S&P 500 Price Return Index (the “S&P 500 Price Index”) while seeking to provide a buffer against the first 8% to 12% of S&P 500 Price Index losses, over the period from February 1, 2021 to January 31, 2022.

Fees and Expenses of the Fund

This table describes the fees and expenses that you may pay if you buy, hold or sell shares of the Fund (“Shares”). This table and the Example below do not include the brokerage commissions that investors may pay on their purchases and sales of Shares.

Shareholder Fees <i>(fees paid directly from your investment)</i>	None
Annual Fund Operating Expenses <i>(expenses that you pay each year as a percentage of the value of your investment)</i>	
Management Fees	0.79%
Distribution and/or Service (12b-1) Fees	0.00%
Other Expenses *	0.00%
Total Annual Fund Operating Expenses	0.79%

* Estimated for the current fiscal year.

Example

This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. The Example assumes that you invest \$10,000 in the Fund for the time periods indicated and then redeem all of your Shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the Fund’s operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

1 Year: \$81

3 Years: \$252

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Shares are held in a taxable account. These costs, which are not reflected in the Annual Fund Operating Expenses or in the Example, affect the Fund’s performance. Because the Fund is newly organized, portfolio turnover information is not yet available.

Principal Investment Strategy

The Fund is an actively-managed exchange-traded fund (“ETF”) that seeks to achieve its investment objective by investing substantially all of its assets in options that reference the S&P 500 Price Index. The Fund’s investment adviser, TrueMark Investments, LLC (“TrueMark”), and sub-adviser, SpiderRock Advisors, LLC (“SpiderRock”), will employ a “buffer protect” options strategy that uses such options to seek to achieve exposure to the S&P 500 Price Index while mitigating the first 8% to 12% decline in the S&P 500 Price Index (the “Buffer”) over a 12-month period beginning on a specified day each February (each, a “Roll Date”). The period from one Roll Date to the next Roll Date is referred to as the “Investment Period,” and the first day of the Investment Period is referred to as the “Initial Investment Day”).

The Fund will purchase call options and sell (write) put options on the S&P 500 Price Index or an ETF that tracks the S&P 500 Price Index on each Initial Investment Day with an expiration on the next Roll Date. An option gives the purchaser of the option the right to purchase (for a call option) or sell (for a put option) the underlying asset (or deliver cash equal to the value of an underlying index) at a specified price (“strike price”). In the event the underlying asset declines in value, the value of a put option will generally increase (and the value of a call option will generally decrease and may end up worthless), and in the event the underlying asset appreciates in value, the value of a put option will generally decrease and may end up worthless (and the value of a call option will generally increase).

On each Initial Investment Day, the Fund will sell (write) put options on the S&P 500 Price Index or an ETF that tracks the S&P 500 Price Index with a strike price within a range of approximately 8% to 12% lower than the current value of the S&P 500 Price Index or an ETF that tracks the S&P 500 Price Index. As the seller of these options, the Fund receives a premium from the buyer of the options, which the Fund invests in at-the-money call options on the S&P 500 Price Index or an ETF that tracks the S&P 500 Price Index (*i.e.*, call options having a strike price roughly equal to the current value of the S&P 500 Price Index or an ETF that tracks the S&P 500 Price Index). The relative price of the put options sold (written) by the Fund to the price of the call options purchased by the Fund will determine

the Fund's exposure to the S&P 500 Price Index during the Investment Period. **Due to the cost of the options used by the Fund, the correlation of the Fund's performance to that of the S&P 500 Price Index is expected to be less than if the Fund invested directly in the S&P 500 Price Index without using options, and could be substantially less.** This means that if the S&P 500 Price Index experiences gains for an Investment Period, the Fund may not realize gains to the same extent.

The Fund's strategy is to seek to protect investors from a decline of up to 8% to 12% in the performance of the S&P 500 Price Index from one Roll Date to the next Roll Date. When the Adviser or Sub-Adviser sells puts on the S&P 500 Price Index to create the buffer range, the proceeds are used to purchase calls at the money. However, not all puts generate the same premium relative to the downside exposure of the Fund. The Adviser will seek to deliver a buffer of 10% from the reference price of the S&P 500 Price Index on the first trading day of the month. However, the market could fluctuate on or after the buffer is set and this range allows for market condition volatility. **The Fund is not designed to protect against declines of more than 8% to 12% in the level of the S&P 500 Price Index, and there can be no guarantee that the Fund will be successful in implementing the buffer protect options strategy to avoid the first 8% to 12% decline.** Additionally, even if the Fund mitigates a decline in the performance of the S&P 500 Price Index from one Roll Date to the next Roll Date, the Fund's returns during the Investment Period (prior to the next Roll Date) may not reflect the buffer protect options strategy.

The Fund will invest in standardized exchange-listed options or in exchange-traded FLEXible EXchange Options ("FLEX Options"), which are customized exchange-traded option contracts available through the Chicago Board Option Exchange ("Cboe") that are guaranteed for settlement by The Options Clearing Corporation ("OCC"). FLEX Options provide investors with the ability to customize exercise prices, exercise styles, and expiration dates, while achieving price discovery in competitive, transparent, auction markets and avoiding the counterparty exposure of over-the-counter ("OTC") options positions. All FLEX Options in the Fund are European-style options (*i.e.*, they can only be exercised at the expiration date of the option) based on the S&P 500 Price Index or an ETF that tracks the S&P 500 Price Index and have an expiration date that is the last day of the Investment Period. In general, the Fund intends to invest in FLEX options only, as these options provide the best combination of OCC guarantees, price discovery, customization, and European-style settlement that is ideal for the Fund. However in certain unforeseen circumstances, listed options may be used by the Fund to provide an additional source of desired market exposure. The Fund also expects to invest in U.S. Treasury bonds.

The Fund is designed to provide the following outcomes during each individual Investment Period:

Change in the Returns of the S&P 500 Price Index	Expected Change in the Returns of the Fund
Declines between -8% and -12% (or more)	Declines 8% to 12% percentage points less than the S&P 500 Price Index (<i>e.g.</i> , if the S&P 500 Price Index returns -35%, the Fund is designed to return -23% to -27%)
Declines between 0% and -8%	No change
Appreciates	The Fund's returns will appreciate to a similar extent as the S&P 500 Price Index, but will be less than those of the S&P 500 Price Index due to the cost of the options used by the Fund

The following charts illustrate the hypothetical returns that the Fund seeks to provide in certain illustrative scenarios for a shareholder that purchases Fund shares on the Initial Investment Day and holds such shares for the entire Investment Period. These charts do not take into account payment by the Fund of fees and expenses and assume a buffer of 10%. **There is no guarantee that the Fund will be successful in providing these investment outcomes for any Investment Period.**

The Fund includes a mix of purchased and written (sold) put and call options structured to achieve the results described above. The Fund is designed to seek to achieve the results described above for investments made on the Initial Investment Day and held until the last day of the Investment Period. **Investments made on any day other than the Initial Investment Day may differ significantly, positively or negatively, from the results described above.** The Fund's website, www.true-shares.com, contains information about the Fund's holdings, and the level of the S&P 500 Price Index as of the Initial Investment Day and the prior business day to assist an investor in understanding and the range of results such investor can expect for investments made at times other than on the Initial Investment Day.

Additionally, the Fund's website provides information relating to the returns of the Fund, including the Fund's Buffer and its position relative to the S&P 500 Price Index on a daily basis.

The Fund's operations are intended to be continuous. It will not terminate and distribute its assets at the conclusion of each Investment Period. On each Roll Date, another Investment Period will commence and the Fund will invest in a new set of options.

The Fund is classified as "non-diversified" under the Investment Company Act of 1940, as amended (the "1940 Act").

Principal Investment Risks

The principal risks of investing in the Fund are summarized below. The principal risks are presented in alphabetical order to facilitate finding particular risks and comparing them with those of other funds. Each risk summarized below is considered a "principal risk" of investing in the Fund, regardless of the order in which it appears. As with any investment, there is a risk that you could lose all or a portion of your investment in the Fund. Some or all of these risks may adversely affect the Fund's net asset value per share ("NAV"), trading price, yield, total return and/or ability to meet its objectives.

- **Buffered Strategy Investment Risk.**

- *Buffered Loss Risk.* There can be no guarantee that the Fund will be successful in its strategy to provide buffer protection against S&P 500 Price Index losses if the S&P 500 Price Index decreases over the Investment Period by 8% or less. A shareholder may lose their entire investment. The Fund's strategy seeks to deliver returns that match the S&P 500 Price Index (but will be less than the S&P 500 Price Index due to the cost of the options used by the Fund), while limiting downside losses, if Shares are bought on the day on which the Fund enters into the options and held until those options expire at the end of each Investment Period. In the event an investor purchases Shares after the date on which the options were entered into or sells Shares prior to the expiration of the options, the buffer that the Fund seeks to provide may not be available. The Fund does not provide principal protection and an investor may experience significant losses on its investment, including the loss of its entire investment.
- *FLEX Options Risk.* The Fund may invest in FLEX Options issued and guaranteed for settlement by the OCC. The Fund bears the risk that the OCC will be unable or unwilling to perform its obligations under the FLEX Options contracts. Additionally, FLEX Options may be illiquid, and in such cases, the Fund may have difficulty closing out certain FLEX Options positions at desired times and prices.
- *Options Risk.* The Fund invests in options that derive their performance from the performance of the S&P 500 Price Index. Writing and buying options are speculative activities and entail investment exposures that are greater than their cost would suggest, meaning that a small investment in an option could have a substantial impact on the performance of the Fund. The Fund's use of call and put options can lead to losses because of adverse movements in the price or value of the underlying stock, index, or other asset, which may be magnified by certain features of the options. These risks are heightened when the Fund's portfolio managers use options to enhance the Fund's return or as a substitute for a position or security. When selling a call or put option, the Fund will receive a premium; however, this premium may not be enough to offset a loss incurred by the Fund if the price of the underlying asset is above or below, respectively, the strike price by an amount equal to or greater than the premium. The value of an option may be adversely affected if the market for the option becomes less liquid or smaller, and will be affected by changes in the value or yield of the option's underlying asset, an increase in interest rates, a change in the actual or perceived volatility of the stock market or the underlying asset and the remaining time to expiration. Additionally, the value of an option does not increase or decrease at the same rate as the underlying asset(s). The Fund's use of options, due to the cost of the options, will reduce the Fund's ability to get returns equal to the S&P 500 Price Index. This means that if the S&P 500 Price Index experiences gains for an Investment Period, the Fund will not benefit to the same extent from those gains. In addition, if the price of the underlying asset of an option is above the strike price of a written call option or below the strike price for a written put option, the value of the option, and consequently of the Fund, may decline significantly more than if the Fund invested directly in the underlying asset instead of using options. The Fund invests in options that derive their performance from the performance of the S&P 500 Price Index and can be volatile and involve various types and degrees of risks. The Fund could experience a loss if its options do not perform as anticipated, or are not correlated with the performance of their underlying stock or if the Fund is unable to purchase or liquidate a position because of an illiquid secondary market.
- *Purchase and Sale Timing Risk.* The Fund is designed to protect against the first 8% to 12% decline in the value of the S&P 500 Price Index and provide for participation in any gains, although not to the same extent, as the value of the S&P 500 Price Index, for a 12-month period from one Roll Date to the next Roll Date. Because the options purchased and written by the Fund will expire on the next Roll Date, if you purchase or sell Shares on a date other than a Roll Date or if you hold Shares for more or less than the time from the most recent Roll Date to the next Roll Date, the value of your investment in Shares may not be protected against the first 8% to 12% decline in the value of the S&P 500 Price Index and may not participate in a gain in the value of the S&P 500 Price Index for your investment period. The value of the options purchased and written by the Fund is dependent on, among other factors, the value, implied volatility, and implied dividend rate of the S&P 500 Price Index and interest rates, any or all of which may vary, sometimes significantly, during the period from the most recent Roll Date to the next Roll Date. Consequently, the value of the Fund may not directly track changes in the value of the S&P 500 Price Index in between Roll Dates.

- **Equity Market Risk.** The Fund invests in options that derive their performance from the S&P 500 Price Index, which is made up of common stocks. Common stocks are susceptible to general stock market fluctuations and to volatile increases and decreases in value as market confidence in and perceptions of their issuers change. These investor perceptions are based on various and unpredictable factors including: expectations regarding government, economic, monetary and fiscal policies; inflation and interest rates; economic expansion or contraction; and global or regional political, economic and banking crises.
- **ETF Risks.** The Fund is an ETF and, as a result of this structure, it is exposed to the following risks:
 - *Authorized Participants (“APs”), Market Makers, and Liquidity Providers Concentration Risk.* The Fund has a limited number of financial institutions that may act as APs. In addition, there may be a limited number of market makers and/or liquidity providers in the marketplace. To the extent either of the following events occur, Shares may trade at a material discount to NAV and possibly face delisting: (i) APs exit the business or otherwise become unable to process creation and/or redemption orders and no other APs step forward to perform these services, or (ii) market makers and/or liquidity providers exit the business or significantly reduce their business activities and no other entities step forward to perform their functions.
 - *Costs of Buying or Selling Shares.* Due to the costs of buying or selling Shares, including brokerage commissions imposed by brokers and bid/ask spreads, frequent trading of Shares may significantly reduce investment results and an investment in Shares may not be advisable for investors who anticipate regularly making small investments.
 - *Shares May Trade at Prices Other Than NAV.* As with all ETFs, Shares may be bought and sold in the secondary market at market prices. Although it is expected that the market price of Shares will approximate the Fund’s NAV, there may be times when the market price of Shares is more than the NAV intra-day (premium) or less than the NAV intra-day (discount) due to supply and demand of Shares or during periods of market volatility. This risk is heightened in times of market volatility, periods of steep market declines, and periods when there is limited trading activity for Shares in the secondary market, in which case such premiums or discounts may be significant.
 - *Trading.* Although Shares are listed for trading on the Cboe BZX Exchange, Inc. (the “Exchange”) and may be traded on U.S. exchanges other than the Exchange, there can be no assurance that Shares will trade with any volume, or at all, on any stock exchange. In stressed market conditions, the liquidity of Shares may begin to mirror the liquidity of the Fund’s underlying portfolio holdings, which can be significantly less liquid than Shares.
- **Management Risk.** The Fund is actively-managed and may not meet its investment objective based on the investment adviser’s and sub-adviser’s success or failure to implement investment strategies for the Fund.
- **New Fund Risk.** The Fund is a recently organized, non-diversified management investment company with no operating history. As a result, prospective investors have no track record or history on which to base their investment decision.
- **Non-Diversification Risk.** Although the Fund may invest in a variety of securities and instruments, the Fund will be considered to be non-diversified, which means that it may invest more of its assets in the securities of a single issuer or a smaller number of issuers than if it were a diversified fund. As a result, the Fund may be more exposed to the risks associated with and developments affecting an individual issuer or a smaller number of issuers than a fund that invests more widely. This may increase the Fund’s volatility and cause the performance of a relatively smaller number of issuers to have a greater impact on the Fund’s performance. However, the Fund intends to satisfy the asset diversification requirements for qualifying as a regulated investment company (“RIC”) under Subchapter M of the Internal Revenue Code of 1986, as amended (the “Code”).
- **Portfolio Turnover Risk.** Because the Fund may “turn over” some or all of its options as frequently as monthly, the Fund may incur high levels of transaction costs from commissions or mark-ups in the bid/offer spread. Higher portfolio turnover may result in the Fund paying higher levels of transaction costs and generating greater tax liabilities for shareholders. Portfolio turnover risk may cause the Fund’s performance to be less than you expect. While the turnover of the call options is not deemed “portfolio turnover” for accounting purposes, the economic impact to the Fund is similar to what could occur if the Fund experienced high portfolio turnover (e.g., in excess of 100% per year).
- **Tax Efficiency Risk.** A significant portion of income received from the Fund may be subject to tax at effective tax rates that are higher than the rates that would apply if the Fund were to engage in a different investment strategy. Additionally, the Fund’s investment strategy may require it to effect redemptions, in whole or in part, for cash. As a result, the Fund may be required to sell portfolio securities to obtain the cash needed to distribute redemption proceeds. This may cause the Fund to recognize investment income and/or capital gains or losses that it might not have recognized if it had completely satisfied the redemption in-kind. As a result, the Fund may be less tax efficient if it includes such a cash payment than if the in-kind redemption process was used exclusively. In addition, cash redemptions may incur higher brokerage costs than in-kind redemptions and these added costs may be borne by the Fund and negatively impact Fund performance. You should consult your tax advisor as to the tax consequences of purchasing, owning, and selling Shares.
- **U.S. Treasury Obligations Risk.** U.S. Treasury obligations may differ from other fixed income securities in their interest rates, maturities, times of issuance and other characteristics. Similar to other issuers, changes to the financial condition or credit rating of the U.S. government may cause the value of the Fund’s U.S. Treasury obligations to decline.

Performance

The Fund is new and therefore does not have a performance history for a full calendar year. In the future, performance information for the Fund will be presented in this section. Updated performance information is available on the Fund's website at www.true-shares.com or by calling the Fund toll free at 1-800-617-0004.

Management

Investment Adviser

TrueMark Investments, LLC serves as investment adviser to the Fund.

Sub-Adviser

SpiderRock Advisors, LLC serves as investment sub-adviser to the Fund

Portfolio Managers

Jordan C. Waldrep, CFA, Chief Investment Officer for the Adviser, Eric Metz, Chief Investment Officer for the Sub-Adviser and Fred Sloneker, Portfolio Manager for the Sub-Adviser, have been portfolio managers of the Fund since its inception in 2020.

Purchase and Sale of Shares

Shares are listed on the Exchange, and most investors will buy and sell Shares through brokers at market prices, rather than NAV. Because Shares trade at market prices rather than NAV, Shares may trade at a price greater than NAV (premium) or less than NAV (discount). The Fund issues and redeems Shares at NAV only in large blocks known as "Creation Units," which only APs (typically, broker-dealers) may purchase or redeem. Creation Units of the Fund generally consist of at least 25,000 Shares, though this may change from time to time. The Fund generally issues and redeems Creation Units in exchange for a portfolio of securities closely approximating the holdings of the Fund (the "Deposit Securities") and/or a designated amount of cash.

Tax Information

Fund distributions are generally taxable as ordinary income, qualified dividend income, or capital gains (or a combination), unless your investment is in an individual retirement account ("IRA") or other tax-advantaged account. Distributions on investments made through tax-deferred arrangements may be taxed later upon withdrawal of assets from those accounts.

Financial Intermediary Compensation

If you purchase Shares through a broker-dealer or other financial intermediary (such as a bank) (an "Intermediary"), the Adviser or its affiliates may pay Intermediaries for certain activities related to the Fund, including participation in activities that are designed to make Intermediaries more knowledgeable about exchange traded products, including the Fund, or for other activities, such as marketing, educational training or other initiatives related to the sale or promotion of Shares. These payments may create a conflict of interest by influencing the Intermediary and your salesperson to recommend the Fund over another investment. Any such arrangements do not result in increased Fund expenses. Ask your salesperson or visit the Intermediary's website for more information.

TRUESHARES STRUCTURED OUTCOME (MARCH) ETF

Investment Objective

The Fund seeks to provide investors with returns (before fees and expenses) that track those of the S&P 500 Price Return Index (the “S&P 500 Price Index”) while seeking to provide a buffer against the first 8% to 12% of S&P 500 Price Index losses, over the period from March 1, 2021 to February 28, 2022.

Fees and Expenses of the Fund

This table describes the fees and expenses that you may pay if you buy, hold or sell shares of the Fund (“Shares”). This table and the Example below do not include the brokerage commissions that investors may pay on their purchases and sales of Shares.

Shareholder Fees <i>(fees paid directly from your investment)</i>	None
Annual Fund Operating Expenses <i>(expenses that you pay each year as a percentage of the value of your investment)</i>	
Management Fees	0.79%
Distribution and/or Service (12b-1) Fees	0.00%
Other Expenses *	0.00%
Total Annual Fund Operating Expenses	0.79%

* Estimated for the current fiscal year.

Example

This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. The Example assumes that you invest \$10,000 in the Fund for the time periods indicated and then redeem all of your Shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the Fund’s operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

1 Year: \$81

3 Years: \$252

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Shares are held in a taxable account. These costs, which are not reflected in the Annual Fund Operating Expenses or in the Example, affect the Fund’s performance. Because the Fund is newly organized, portfolio turnover information is not yet available.

Principal Investment Strategy

The Fund is an actively-managed exchange-traded fund (“ETF”) that seeks to achieve its investment objective by investing substantially all of its assets in options that reference the S&P 500 Price Index. The Fund’s investment adviser, TrueMark Investments, LLC (“TrueMark”), and sub-adviser, SpiderRock Advisors, LLC (“SpiderRock”), will employ a “buffer protect” options strategy that uses such options to seek to achieve exposure to the S&P 500 Price Index while mitigating the first 8% to 12% decline in the S&P 500 Price Index (the “Buffer”) over a 12-month period beginning on a specified day each March (each, a “Roll Date”). The period from one Roll Date to the next Roll Date is referred to as the “Investment Period,” and the first day of the Investment Period is referred to as the “Initial Investment Day”).

The Fund will purchase call options and sell (write) put options on the S&P 500 Price Index or an ETF that tracks the S&P 500 Price Index on each Initial Investment Day with an expiration on the next Roll Date. An option gives the purchaser of the option the right to purchase (for a call option) or sell (for a put option) the underlying asset (or deliver cash equal to the value of an underlying index) at a specified price (“strike price”). In the event the underlying asset declines in value, the value of a put option will generally increase (and the value of a call option will generally decrease and may end up worthless), and in the event the underlying asset appreciates in value, the value of a put option will generally decrease and may end up worthless (and the value of a call option will generally increase).

On each Initial Investment Day, the Fund will sell (write) put options on the S&P 500 Price Index or an ETF that tracks the S&P 500 Price Index with a strike price within a range of approximately 8% to 12% lower than the current value of the S&P 500 Price Index or an ETF that tracks the S&P 500 Price Index. As the seller of these options, the Fund receives a premium from the buyer of the options, which the Fund invests in at-the-money call options on the S&P 500 Price Index or an ETF that tracks the S&P 500 Price Index (*i.e.*, call options having a strike price roughly equal to the current value of the S&P 500 Price Index or an ETF that tracks the S&P 500 Price Index). The relative price of the put options sold (written) by the Fund to the price of the call options purchased by the Fund will determine

the Fund's exposure to the S&P 500 Price Index during the Investment Period. **Due to the cost of the options used by the Fund, the correlation of the Fund's performance to that of the S&P 500 Price Index is expected to be less than if the Fund invested directly in the S&P 500 Price Index without using options, and could be substantially less.** This means that if the S&P 500 Price Index experiences gains for an Investment Period, the Fund may not realize gains to the same extent.

The Fund's strategy is to seek to protect investors from a decline of up to 8% to 12% in the performance of the S&P 500 Price Index from one Roll Date to the next Roll Date. When the Adviser or Sub-Adviser sells puts on the S&P 500 Price Index to create the buffer range, the proceeds are used to purchase calls at the money. However, not all puts generate the same premium relative to the downside exposure of the Fund. The Adviser will seek to deliver a buffer of 10% from the reference price of the S&P 500 Price Index on the first trading day of the month. However, the market could fluctuate on or after the buffer is set and this range allows for market condition volatility. **The Fund is not designed to protect against declines of more than 8% to 12% in the level of the S&P 500 Price Index, and there can be no guarantee that the Fund will be successful in implementing the buffer protect options strategy to avoid the first 8% to 12% decline.** Additionally, even if the Fund mitigates a decline in the performance of the S&P 500 Price Index from one Roll Date to the next Roll Date, the Fund's returns during the Investment Period (prior to the next Roll Date) may not reflect the buffer protect options strategy.

The Fund will invest in standardized exchange-listed options or in exchange-traded FLEXible EXchange Options ("FLEX Options"), which are customized exchange-traded option contracts available through the Chicago Board Option Exchange ("Cboe") that are guaranteed for settlement by The Options Clearing Corporation ("OCC"). FLEX Options provide investors with the ability to customize exercise prices, exercise styles, and expiration dates, while achieving price discovery in competitive, transparent, auction markets and avoiding the counterparty exposure of over-the-counter ("OTC") options positions. All FLEX Options in the Fund are European-style options (*i.e.*, they can only be exercised at the expiration date of the option) based on the S&P 500 Price Index or an ETF that tracks the S&P 500 Price Index and have an expiration date that is the last day of the Investment Period. In general, the Fund intends to invest in FLEX options only, as these options provide the best combination of OCC guarantees, price discovery, customization, and European-style settlement that is ideal for the Fund. However in certain unforeseen circumstances, listed options may be used by the Fund to provide an additional source of desired market exposure. The Fund also expects to invest in U.S. Treasury bonds.

The Fund is designed to provide the following outcomes during each individual Investment Period:

Change in the Returns of the S&P 500 Price Index	Expected Change in the Returns of the Fund
Declines between -8% and -12% (or more)	Declines 8% to 12% percentage points less than the S&P 500 Price Index (<i>e.g.</i> , if the S&P 500 Price Index returns -35%, the Fund is designed to return -23% to -27%)
Declines between 0% and -8%	No change
Appreciates	The Fund's returns will appreciate to a similar extent as the S&P 500 Price Index, but will be less than those of the S&P 500 Price Index due to the cost of the options used by the Fund

The following charts illustrate the hypothetical returns that the Fund seeks to provide in certain illustrative scenarios for a shareholder that purchases Fund shares on the Initial Investment Day and holds such shares for the entire Investment Period. These charts do not take into account payment by the Fund of fees and expenses and assume a buffer of 10%. **There is no guarantee that the Fund will be successful in providing these investment outcomes for any Investment Period.**

The Fund includes a mix of purchased and written (sold) put and call options structured to achieve the results described above. The Fund is designed to seek to achieve the results described above for investments made on the Initial Investment Day and held until the last day of the Investment Period. **Investments made on any day other than the Initial Investment Day may differ significantly, positively or negatively, from the results described above.** The Fund's website, www.true-shares.com, contains information about the Fund's holdings, and the level of the S&P 500 Price Index as of the Initial Investment Day and the prior business day to assist an investor in understanding and the range of results such investor can expect for investments made at times other than on the Initial Investment Day.

Additionally, the Fund's website provides information relating to the returns of the Fund, including the Fund's Buffer and its position relative to the S&P 500 Price Index on a daily basis.

The Fund's operations are intended to be continuous. It will not terminate and distribute its assets at the conclusion of each Investment Period. On each Roll Date, another Investment Period will commence and the Fund will invest in a new set of options.

The Fund is classified as "non-diversified" under the Investment Company Act of 1940, as amended (the "1940 Act").

Principal Investment Risks

The principal risks of investing in the Fund are summarized below. The principal risks are presented in alphabetical order to facilitate finding particular risks and comparing them with those of other funds. Each risk summarized below is considered a "principal risk" of investing in the Fund, regardless of the order in which it appears. As with any investment, there is a risk that you could lose all or a portion of your investment in the Fund. Some or all of these risks may adversely affect the Fund's net asset value per share ("NAV"), trading price, yield, total return and/or ability to meet its objectives.

- **Buffered Strategy Investment Risk.**

- *Buffered Loss Risk.* There can be no guarantee that the Fund will be successful in its strategy to provide buffer protection against S&P 500 Price Index losses if the S&P 500 Price Index decreases over the Investment Period by 8% or less. A shareholder may lose their entire investment. The Fund's strategy seeks to deliver returns that match the S&P 500 Price Index (but will be less than the S&P 500 Price Index due to the cost of the options used by the Fund), while limiting downside losses, if Shares are bought on the day on which the Fund enters into the options and held until those options expire at the end of each Investment Period. In the event an investor purchases Shares after the date on which the options were entered into or sells Shares prior to the expiration of the options, the buffer that the Fund seeks to provide may not be available. The Fund does not provide principal protection and an investor may experience significant losses on its investment, including the loss of its entire investment.
- *FLEX Options Risk.* The Fund may invest in FLEX Options issued and guaranteed for settlement by the OCC. The Fund bears the risk that the OCC will be unable or unwilling to perform its obligations under the FLEX Options contracts. Additionally, FLEX Options may be illiquid, and in such cases, the Fund may have difficulty closing out certain FLEX Options positions at desired times and prices.
- *Options Risk.* The Fund invests in options that derive their performance from the performance of the S&P 500 Price Index. Writing and buying options are speculative activities and entail investment exposures that are greater than their cost would suggest, meaning that a small investment in an option could have a substantial impact on the performance of the Fund. The Fund's use of call and put options can lead to losses because of adverse movements in the price or value of the underlying stock, index, or other asset, which may be magnified by certain features of the options. These risks are heightened when the Fund's portfolio managers use options to enhance the Fund's return or as a substitute for a position or security. When selling a call or put option, the Fund will receive a premium; however, this premium may not be enough to offset a loss incurred by the Fund if the price of the underlying asset is above or below, respectively, the strike price by an amount equal to or greater than the premium. The value of an option may be adversely affected if the market for the option becomes less liquid or smaller, and will be affected by changes in the value or yield of the option's underlying asset, an increase in interest rates, a change in the actual or perceived volatility of the stock market or the underlying asset and the remaining time to expiration. Additionally, the value of an option does not increase or decrease at the same rate as the underlying asset(s). The Fund's use of options, due to the cost of the options, will reduce the Fund's ability to get returns equal to the S&P 500 Price Index. This means that if the S&P 500 Price Index experiences gains for an Investment Period, the Fund will not benefit to the same extent from those gains. In addition, if the price of the underlying asset of an option is above the strike price of a written call option or below the strike price for a written put option, the value of the option, and consequently of the Fund, may decline significantly more than if the Fund invested directly in the underlying asset instead of using options. The Fund invests in options that derive their performance from the performance of the S&P 500 Price Index and can be volatile and involve various types and degrees of risks. The Fund could experience a loss if its options do not perform as anticipated, or are not correlated with the performance of their underlying stock or if the Fund is unable to purchase or liquidate a position because of an illiquid secondary market.
- *Purchase and Sale Timing Risk.* The Fund is designed to protect against the first 8% to 12% decline in the value of the S&P 500 Price Index and provide for participation in any gains, although not to the same extent, as the value of the S&P 500 Price Index, for a 12-month period from one Roll Date to the next Roll Date. Because the options purchased and written by the Fund will expire on the next Roll Date, if you purchase or sell Shares on a date other than a Roll Date or if you hold Shares for more or less than the time from the most recent Roll Date to the next Roll Date, the value of your investment in Shares may not be protected against the first 8% to 12% decline in the value of the S&P 500 Price Index and may not participate in a gain in the value of the S&P 500 Price Index for your investment period. The value of the options purchased and written by the Fund is dependent on, among other factors, the value, implied volatility, and implied dividend rate of the S&P 500 Price Index and interest rates, any or all of which may vary, sometimes significantly, during the period from the most recent Roll Date to the next Roll Date. Consequently, the value of the Fund may not directly track changes in the value of the S&P 500 Price Index in between Roll Dates.

- **Equity Market Risk.** The Fund invests in options that derive their performance from the S&P 500 Price Index, which is made up of common stocks. Common stocks are susceptible to general stock market fluctuations and to volatile increases and decreases in value as market confidence in and perceptions of their issuers change. These investor perceptions are based on various and unpredictable factors including: expectations regarding government, economic, monetary and fiscal policies; inflation and interest rates; economic expansion or contraction; and global or regional political, economic and banking crises.
- **ETF Risks.** The Fund is an ETF and, as a result of this structure, it is exposed to the following risks:
 - *Authorized Participants (“APs”), Market Makers, and Liquidity Providers Concentration Risk.* The Fund has a limited number of financial institutions that may act as APs. In addition, there may be a limited number of market makers and/or liquidity providers in the marketplace. To the extent either of the following events occur, Shares may trade at a material discount to NAV and possibly face delisting: (i) APs exit the business or otherwise become unable to process creation and/or redemption orders and no other APs step forward to perform these services, or (ii) market makers and/or liquidity providers exit the business or significantly reduce their business activities and no other entities step forward to perform their functions.
 - *Costs of Buying or Selling Shares.* Due to the costs of buying or selling Shares, including brokerage commissions imposed by brokers and bid/ask spreads, frequent trading of Shares may significantly reduce investment results and an investment in Shares may not be advisable for investors who anticipate regularly making small investments.
 - *Shares May Trade at Prices Other Than NAV.* As with all ETFs, Shares may be bought and sold in the secondary market at market prices. Although it is expected that the market price of Shares will approximate the Fund’s NAV, there may be times when the market price of Shares is more than the NAV intra-day (premium) or less than the NAV intra-day (discount) due to supply and demand of Shares or during periods of market volatility. This risk is heightened in times of market volatility, periods of steep market declines, and periods when there is limited trading activity for Shares in the secondary market, in which case such premiums or discounts may be significant.
 - *Trading.* Although Shares are listed for trading on the Cboe BZX Exchange, Inc. (the “Exchange”) and may be traded on U.S. exchanges other than the Exchange, there can be no assurance that Shares will trade with any volume, or at all, on any stock exchange. In stressed market conditions, the liquidity of Shares may begin to mirror the liquidity of the Fund’s underlying portfolio holdings, which can be significantly less liquid than Shares.
- **Management Risk.** The Fund is actively-managed and may not meet its investment objective based on the investment adviser’s and sub-adviser’s success or failure to implement investment strategies for the Fund.
- **New Fund Risk.** The Fund is a recently organized, non-diversified management investment company with no operating history. As a result, prospective investors have no track record or history on which to base their investment decision.
- **Non-Diversification Risk.** Although the Fund may invest in a variety of securities and instruments, the Fund will be considered to be non-diversified, which means that it may invest more of its assets in the securities of a single issuer or a smaller number of issuers than if it were a diversified fund. As a result, the Fund may be more exposed to the risks associated with and developments affecting an individual issuer or a smaller number of issuers than a fund that invests more widely. This may increase the Fund’s volatility and cause the performance of a relatively smaller number of issuers to have a greater impact on the Fund’s performance. However, the Fund intends to satisfy the asset diversification requirements for qualifying as a regulated investment company (“RIC”) under Subchapter M of the Internal Revenue Code of 1986, as amended (the “Code”).
- **Portfolio Turnover Risk.** Because the Fund may “turn over” some or all of its options as frequently as monthly, the Fund may incur high levels of transaction costs from commissions or mark-ups in the bid/offer spread. Higher portfolio turnover may result in the Fund paying higher levels of transaction costs and generating greater tax liabilities for shareholders. Portfolio turnover risk may cause the Fund’s performance to be less than you expect. While the turnover of the call options is not deemed “portfolio turnover” for accounting purposes, the economic impact to the Fund is similar to what could occur if the Fund experienced high portfolio turnover (e.g., in excess of 100% per year).
- **Tax Efficiency Risk.** A significant portion of income received from the Fund may be subject to tax at effective tax rates that are higher than the rates that would apply if the Fund were to engage in a different investment strategy. Additionally, the Fund’s investment strategy may require it to effect redemptions, in whole or in part, for cash. As a result, the Fund may be required to sell portfolio securities to obtain the cash needed to distribute redemption proceeds. This may cause the Fund to recognize investment income and/or capital gains or losses that it might not have recognized if it had completely satisfied the redemption in-kind. As a result, the Fund may be less tax efficient if it includes such a cash payment than if the in-kind redemption process was used exclusively. In addition, cash redemptions may incur higher brokerage costs than in-kind redemptions and these added costs may be borne by the Fund and negatively impact Fund performance. You should consult your tax advisor as to the tax consequences of purchasing, owning, and selling Shares.
- **U.S. Treasury Obligations Risk.** U.S. Treasury obligations may differ from other fixed income securities in their interest rates, maturities, times of issuance and other characteristics. Similar to other issuers, changes to the financial condition or credit rating of the U.S. government may cause the value of the Fund’s U.S. Treasury obligations to decline.

Performance

The Fund is new and therefore does not have a performance history for a full calendar year. In the future, performance information for the Fund will be presented in this section. Updated performance information is available on the Fund's website at www.true-shares.com or by calling the Fund toll free at 1-800-617-0004.

Management

Investment Adviser

TrueMark Investments, LLC serves as investment adviser to the Fund.

Sub-Adviser

SpiderRock Advisors, LLC serves as investment sub-adviser to the Fund

Portfolio Managers

Jordan C. Waldrep, CFA, Chief Investment Officer for the Adviser, Eric Metz, Chief Investment Officer for the Sub-Adviser and Fred Sloneker, Portfolio Manager for the Sub-Adviser, have been portfolio managers of the Fund since its inception in 2020.

Purchase and Sale of Shares

Shares are listed on the Exchange, and most investors will buy and sell Shares through brokers at market prices, rather than NAV. Because Shares trade at market prices rather than NAV, Shares may trade at a price greater than NAV (premium) or less than NAV (discount). The Fund issues and redeems Shares at NAV only in large blocks known as "Creation Units," which only APs (typically, broker-dealers) may purchase or redeem. Creation Units of the Fund generally consist of at least 25,000 Shares, though this may change from time to time. The Fund generally issues and redeems Creation Units in exchange for a portfolio of securities closely approximating the holdings of the Fund (the "Deposit Securities") and/or a designated amount of cash.

Tax Information

Fund distributions are generally taxable as ordinary income, qualified dividend income, or capital gains (or a combination), unless your investment is in an individual retirement account ("IRA") or other tax-advantaged account. Distributions on investments made through tax-deferred arrangements may be taxed later upon withdrawal of assets from those accounts.

Financial Intermediary Compensation

If you purchase Shares through a broker-dealer or other financial intermediary (such as a bank) (an "Intermediary"), the Adviser or its affiliates may pay Intermediaries for certain activities related to the Fund, including participation in activities that are designed to make Intermediaries more knowledgeable about exchange traded products, including the Fund, or for other activities, such as marketing, educational training or other initiatives related to the sale or promotion of Shares. These payments may create a conflict of interest by influencing the Intermediary and your salesperson to recommend the Fund over another investment. Any such arrangements do not result in increased Fund expenses. Ask your salesperson or visit the Intermediary's website for more information.

TRUESHARES STRUCTURED OUTCOME (APRIL) ETF

Investment Objective

The Fund seeks to provide investors with returns (before fees and expenses) that track those of the S&P 500 Price Return Index (the “S&P 500 Price Index”) while seeking to provide a buffer against the first 8% to 12% of S&P 500 Price Index losses, over the period from April 1, 2021 to March 31, 2022.

Fees and Expenses of the Fund

This table describes the fees and expenses that you may pay if you buy, hold or sell shares of the Fund (“Shares”). This table and the Example below do not include the brokerage commissions that investors may pay on their purchases and sales of Shares.

Shareholder Fees <i>(fees paid directly from your investment)</i>	None
Annual Fund Operating Expenses <i>(expenses that you pay each year as a percentage of the value of your investment)</i>	
Management Fees	0.79%
Distribution and/or Service (12b-1) Fees	0.00%
Other Expenses*	0.00%
Total Annual Fund Operating Expenses	0.79%

* Estimated for the current fiscal year.

Example

This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. The Example assumes that you invest \$10,000 in the Fund for the time periods indicated and then redeem all of your Shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the Fund’s operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

1 Year: \$81

3 Years: \$252

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Shares are held in a taxable account. These costs, which are not reflected in the Annual Fund Operating Expenses or in the Example, affect the Fund’s performance. Because the Fund is newly organized, portfolio turnover information is not yet available.

Principal Investment Strategy

The Fund is an actively-managed exchange-traded fund (“ETF”) that seeks to achieve its investment objective by investing substantially all of its assets in options that reference the S&P 500 Price Index. The Fund’s investment adviser, TrueMark Investments, LLC (“TrueMark”), and sub-adviser, SpiderRock Advisors, LLC (“SpiderRock”), will employ a “buffer protect” options strategy that uses such options to seek to achieve exposure to the S&P 500 Price Index while mitigating the first 8% to 12% decline in the S&P 500 Price Index (the “Buffer”) over a 12-month period beginning on a specified day each April (each, a “Roll Date”). The period from one Roll Date to the next Roll Date is referred to as the “Investment Period,” and the first day of the Investment Period is referred to as the “Initial Investment Day”).

The Fund will purchase call options and sell (write) put options on the S&P 500 Price Index or an ETF that tracks the S&P 500 Price Index on each Initial Investment Day with an expiration on the next Roll Date. An option gives the purchaser of the option the right to purchase (for a call option) or sell (for a put option) the underlying asset (or deliver cash equal to the value of an underlying index) at a specified price (“strike price”). In the event the underlying asset declines in value, the value of a put option will generally increase (and the value of a call option will generally decrease and may end up worthless), and in the event the underlying asset appreciates in value, the value of a put option will generally decrease and may end up worthless (and the value of a call option will generally increase).

On each Initial Investment Day, the Fund will sell (write) put options on the S&P 500 Price Index or an ETF that tracks the S&P 500 Price Index with a strike price within a range of approximately 8% to 12% lower than the current value of the S&P 500 Price Index or an ETF that tracks the S&P 500 Price Index. As the seller of these options, the Fund receives a premium from the buyer of the options, which the Fund invests in at-the-money call options on the S&P 500 Price Index or an ETF that tracks the S&P 500 Price Index (*i.e.*, call options having a strike price roughly equal to the current value of the S&P 500 Price Index or an ETF that tracks the S&P 500 Price Index). The relative price of the put options sold (written) by the Fund to the price of the call options purchased by the Fund will determine

the Fund's exposure to the S&P 500 Price Index during the Investment Period. **Due to the cost of the options used by the Fund, the correlation of the Fund's performance to that of the S&P 500 Price Index is expected to be less than if the Fund invested directly in the S&P 500 Price Index without using options, and could be substantially less.** This means that if the S&P 500 Price Index experiences gains for an Investment Period, the Fund may not realize gains to the same extent.

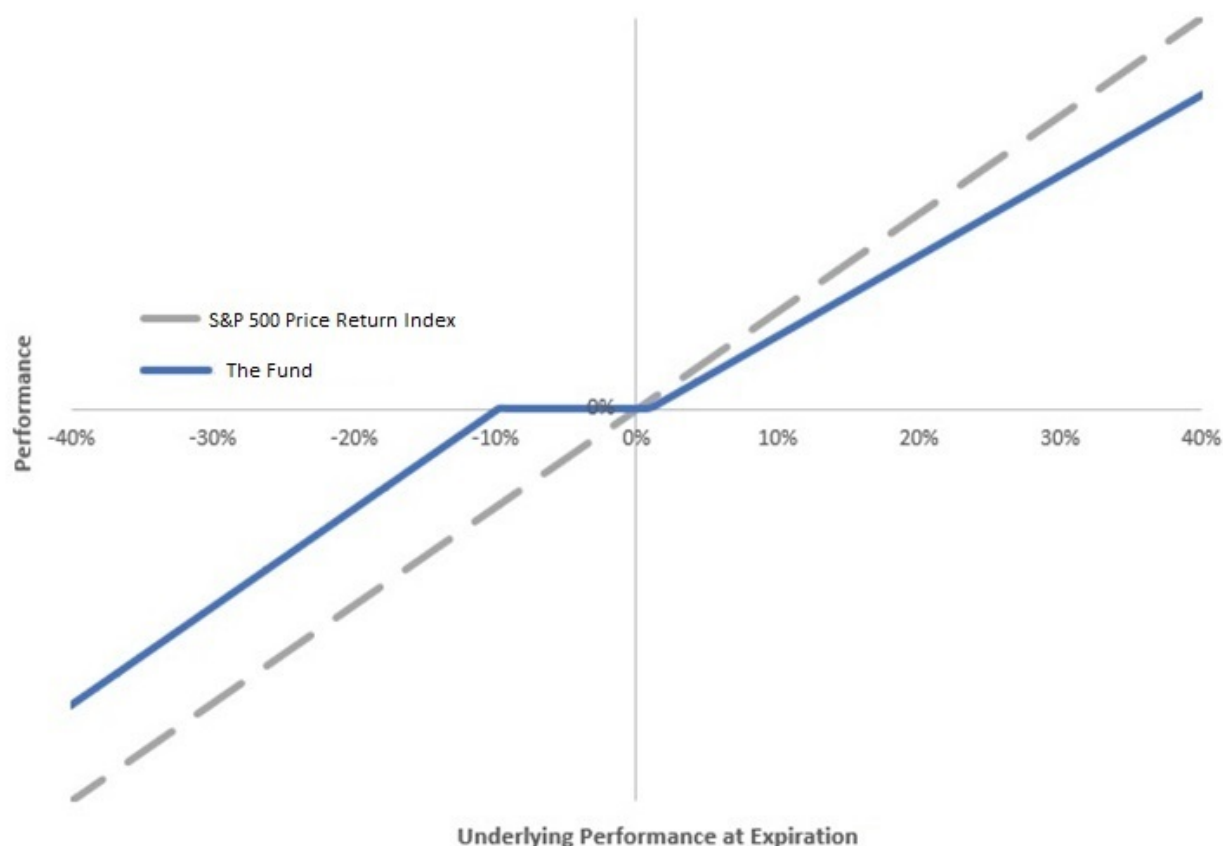

The Fund's strategy is to seek to protect investors from a decline of up to 8% to 12% in the performance of the S&P 500 Price Index from one Roll Date to the next Roll Date. When the Adviser or Sub-Adviser sells puts on the S&P 500 Price Index to create the buffer range, the proceeds are used to purchase calls at the money. However, not all puts generate the same premium relative to the downside exposure of the Fund. The Adviser will seek to deliver a buffer of 10% from the reference price of the S&P 500 Price Index on the first trading day of the month. However, the market could fluctuate on or after the buffer is set and this range allows for market condition volatility. **The Fund is not designed to protect against declines of more than 8% to 12% in the level of the S&P 500 Price Index, and there can be no guarantee that the Fund will be successful in implementing the buffer protect options strategy to avoid the first 8% to 12% decline.** Additionally, even if the Fund mitigates a decline in the performance of the S&P 500 Price Index from one Roll Date to the next Roll Date, the Fund's returns during the Investment Period (prior to the next Roll Date) may not reflect the buffer protect options strategy.

The Fund will invest in standardized exchange-listed options or in exchange-traded FLEXible EXchange Options ("FLEX Options"), which are customized exchange-traded option contracts available through the Chicago Board Option Exchange ("Cboe") that are guaranteed for settlement by The Options Clearing Corporation ("OCC"). FLEX Options provide investors with the ability to customize exercise prices, exercise styles, and expiration dates, while achieving price discovery in competitive, transparent, auction markets and avoiding the counterparty exposure of over-the-counter ("OTC") options positions. All FLEX Options in the Fund are European-style options (*i.e.*, they can only be exercised at the expiration date of the option) based on the S&P 500 Price Index or an ETF that tracks the S&P 500 Price Index and have an expiration date that is the last day of the Investment Period. In general, the Fund intends to invest in FLEX options only, as these options provide the best combination of OCC guarantees, price discovery, customization, and European-style settlement that is ideal for the Fund. However in certain unforeseen circumstances, listed options may be used by the Fund to provide an additional source of desired market exposure. The Fund also expects to invest in U.S. Treasury bonds.

The Fund is designed to provide the following outcomes during each individual Investment Period:

Change in the Returns of the S&P 500 Price Index	Expected Change in the Returns of the Fund
Declines between -8% and -12% (or more)	Declines 8% to 12% percentage points less than the S&P 500 Price Index (<i>e.g.</i> , if the S&P 500 Price Index returns -35%, the Fund is designed to return -23% to -27%)
Declines between 0% and -8%	No change
Appreciates	The Fund's returns will appreciate to a similar extent as the S&P 500 Price Index, but will be less than those of the S&P 500 Price Index due to the cost of the options used by the Fund

The following charts illustrate the hypothetical returns that the Fund seeks to provide in certain illustrative scenarios for a shareholder that purchases Fund shares on the Initial Investment Day and holds such shares for the entire Investment Period. These charts do not take into account payment by the Fund of fees and expenses and assume a buffer of 10%. **There is no guarantee that the Fund will be successful in providing these investment outcomes for any Investment Period.**

The Fund includes a mix of purchased and written (sold) put and call options structured to achieve the results described above. The Fund is designed to seek to achieve the results described above for investments made on the Initial Investment Day and held until the last day of the Investment Period. **Investments made on any day other than the Initial Investment Day may differ significantly, positively or negatively, from the results described above.** The Fund's website, www.true-shares.com, contains information about the Fund's holdings, and the level of the S&P 500 Price Index as of the Initial Investment Day and the prior business day to assist an investor in understanding and the range of results such investor can expect for investments made at times other than on the Initial Investment Day.

Additionally, the Fund's website provides information relating to the returns of the Fund, including the Fund's Buffer and its position relative to the S&P 500 Price Index on a daily basis.

The Fund's operations are intended to be continuous. It will not terminate and distribute its assets at the conclusion of each Investment Period. On each Roll Date, another Investment Period will commence and the Fund will invest in a new set of options.

The Fund is classified as "non-diversified" under the Investment Company Act of 1940, as amended (the "1940 Act").

Principal Investment Risks

The principal risks of investing in the Fund are summarized below. The principal risks are presented in alphabetical order to facilitate finding particular risks and comparing them with those of other funds. Each risk summarized below is considered a "principal risk" of investing in the Fund, regardless of the order in which it appears. As with any investment, there is a risk that you could lose all or a portion of your investment in the Fund. Some or all of these risks may adversely affect the Fund's net asset value per share ("NAV"), trading price, yield, total return and/or ability to meet its objectives.

- **Buffered Strategy Investment Risk.**

- *Buffered Loss Risk.* There can be no guarantee that the Fund will be successful in its strategy to provide buffer protection against S&P 500 Price Index losses if the S&P 500 Price Index decreases over the Investment Period by 8% or less. A shareholder may lose their entire investment. The Fund's strategy seeks to deliver returns that match the S&P 500 Price Index (but will be less than the S&P 500 Price Index due to the cost of the options used by the Fund), while limiting downside losses, if Shares are bought on the day on which the Fund enters into the options and held until those options expire at the end of each Investment Period. In the event an investor purchases Shares after the date on which the options were entered into or sells Shares prior to the expiration of the options, the buffer that the Fund seeks to provide may not be available. The Fund does not provide principal protection and an investor may experience significant losses on its investment, including the loss of its entire investment.
- *FLEX Options Risk.* The Fund may invest in FLEX Options issued and guaranteed for settlement by the OCC. The Fund bears the risk that the OCC will be unable or unwilling to perform its obligations under the FLEX Options contracts. Additionally, FLEX Options may be illiquid, and in such cases, the Fund may have difficulty closing out certain FLEX Options positions at desired times and prices.
- *Options Risk.* The Fund invests in options that derive their performance from the performance of the S&P 500 Price Index. Writing and buying options are speculative activities and entail investment exposures that are greater than their cost would suggest, meaning that a small investment in an option could have a substantial impact on the performance of the Fund. The Fund's use of call and put options can lead to losses because of adverse movements in the price or value of the underlying stock, index, or other asset, which may be magnified by certain features of the options. These risks are heightened when the Fund's portfolio managers use options to enhance the Fund's return or as a substitute for a position or security. When selling a call or put option, the Fund will receive a premium; however, this premium may not be enough to offset a loss incurred by the Fund if the price of the underlying asset is above or below, respectively, the strike price by an amount equal to or greater than the premium. The value of an option may be adversely affected if the market for the option becomes less liquid or smaller, and will be affected by changes in the value or yield of the option's underlying asset, an increase in interest rates, a change in the actual or perceived volatility of the stock market or the underlying asset and the remaining time to expiration. Additionally, the value of an option does not increase or decrease at the same rate as the underlying asset(s). The Fund's use of options, due to the cost of the options, will reduce the Fund's ability to get returns equal to the S&P 500 Price Index. This means that if the S&P 500 Price Index experiences gains for an Investment Period, the Fund will not benefit to the same extent from those gains. In addition, if the price of the underlying asset of an option is above the strike price of a written call option or below the strike price for a written put option, the value of the option, and consequently of the Fund, may decline significantly more than if the Fund invested directly in the underlying asset instead of using options. The Fund invests in options that derive their performance from the performance of the S&P 500 Price Index and can be volatile and involve various types and degrees of risks. The Fund could experience a loss if its options do not perform as anticipated, or are not correlated with the performance of their underlying stock or if the Fund is unable to purchase or liquidate a position because of an illiquid secondary market.
- *Purchase and Sale Timing Risk.* The Fund is designed to protect against the first 8% to 12% decline in the value of the S&P 500 Price Index and provide for participation in any gains, although not to the same extent, as the value of the S&P 500 Price Index, for a 12-month period from one Roll Date to the next Roll Date. Because the options purchased and written by the Fund will expire on the next Roll Date, if you purchase or sell Shares on a date other than a Roll Date or if you hold Shares for more or less than the time from the most recent Roll Date to the next Roll Date, the value of your investment in Shares may not be protected against the first 8% to 12% decline in the value of the S&P 500 Price Index and may not participate in a gain in the value of the S&P 500 Price Index for your investment period. The value of the options purchased and written by the Fund is dependent on, among other factors, the value, implied volatility, and implied dividend rate of the S&P 500 Price Index and interest rates, any or all of which may vary, sometimes significantly, during the period from the most recent Roll Date to the next Roll Date. Consequently, the value of the Fund may not directly track changes in the value of the S&P 500 Price Index in between Roll Dates.

- **Equity Market Risk.** The Fund invests in options that derive their performance from the S&P 500 Price Index, which is made up of common stocks. Common stocks are susceptible to general stock market fluctuations and to volatile increases and decreases in value as market confidence in and perceptions of their issuers change. These investor perceptions are based on various and unpredictable factors including: expectations regarding government, economic, monetary and fiscal policies; inflation and interest rates; economic expansion or contraction; and global or regional political, economic and banking crises.

 - *Shares May Trade at Prices Other Than NAV.* As with all ETFs, Shares may be bought and sold in the secondary market at market prices. Although it is expected that the market price of Shares will approximate the Fund’s NAV, there may be times when the market price of Shares is more than the NAV intra-day (premium) or less than the NAV intra-day (discount) due to supply and demand of Shares or during periods of market volatility. This risk is heightened in times of market volatility, periods of steep market declines, and periods when there is limited trading activity for Shares in the secondary market, in which case such premiums or discounts may be significant.
 - *Trading.* Although Shares are listed for trading on the Cboe BZX Exchange, Inc. (the “Exchange”) and may be traded on U.S. exchanges other than the Exchange, there can be no assurance that Shares will trade with any volume, or at all, on any stock exchange. In stressed market conditions, the liquidity of Shares may begin to mirror the liquidity of the Fund’s underlying portfolio holdings, which can be significantly less liquid than Shares.
- **Management Risk.** The Fund is actively-managed and may not meet its investment objective based on the investment adviser’s and sub-adviser’s success or failure to implement investment strategies for the Fund.
- **New Fund Risk.** The Fund is a recently organized, non-diversified management investment company with no operating history. As a result, prospective investors have no track record or history on which to base their investment decision.
- **Non-Diversification Risk.** Although the Fund may invest in a variety of securities and instruments, the Fund will be considered to be non-diversified, which means that it may invest more of its assets in the securities of a single issuer or a smaller number of issuers than if it were a diversified fund. As a result, the Fund may be more exposed to the risks associated with and developments affecting an individual issuer or a smaller number of issuers than a fund that invests more widely. This may increase the Fund’s volatility and cause the performance of a relatively smaller number of issuers to have a greater impact on the Fund’s performance. However, the Fund intends to satisfy the asset diversification requirements for qualifying as a regulated investment company (“RIC”) under Subchapter M of the Internal Revenue Code of 1986, as amended (the “Code”).
- **Portfolio Turnover Risk.** Because the Fund may “turn over” some or all of its options as frequently as monthly, the Fund may incur high levels of transaction costs from commissions or mark-ups in the bid/offer spread. Higher portfolio turnover may result in the Fund paying higher levels of transaction costs and generating greater tax liabilities for shareholders. Portfolio turnover risk may cause the Fund’s performance to be less than you expect. While the turnover of the call options is not deemed “portfolio turnover” for accounting purposes, the economic impact to the Fund is similar to what could occur if the Fund experienced high portfolio turnover (e.g., in excess of 100% per year).
- **Tax Efficiency Risk.** A significant portion of income received from the Fund may be subject to tax at effective tax rates that are higher than the rates that would apply if the Fund were to engage in a different investment strategy. Additionally, the Fund’s investment strategy may require it to effect redemptions, in whole or in part, for cash. As a result, the Fund may be required to sell portfolio securities to obtain the cash needed to distribute redemption proceeds. This may cause the Fund to recognize investment income and/or capital gains or losses that it might not have recognized if it had completely satisfied the redemption in-kind. As a result, the Fund may be less tax efficient if it includes such a cash payment than if the in-kind redemption process was used exclusively. In addition, cash redemptions may incur higher brokerage costs than in-kind redemptions and these added costs may be borne by the Fund and negatively impact Fund performance. You should consult your tax advisor as to the tax consequences of purchasing, owning, and selling Shares.
- **U.S. Treasury Obligations Risk.** U.S. Treasury obligations may differ from other fixed income securities in their interest rates, maturities, times of issuance and other characteristics. Similar to other issuers, changes to the financial condition or credit rating of the U.S. government may cause the value of the Fund’s U.S. Treasury obligations to decline.

Performance

The Fund is new and therefore does not have a performance history for a full calendar year. In the future, performance information for the Fund will be presented in this section. Updated performance information is available on the Fund's website at www.true-shares.com or by calling the Fund toll free at 1-800-617-0004.

Management

Investment Adviser

TrueMark Investments, LLC serves as investment adviser to the Fund.

Sub-Adviser

SpiderRock Advisors, LLC serves as investment sub-adviser to the Fund

Portfolio Managers

Jordan C. Waldrep, CFA, Chief Investment Officer for the Adviser, Eric Metz, Chief Investment Officer for the Sub-Adviser and Fred Sloneker, Portfolio Manager for the Sub-Adviser, have been portfolio managers of the Fund since its inception in 2020.

Purchase and Sale of Shares

Shares are listed on the Exchange, and most investors will buy and sell Shares through brokers at market prices, rather than NAV. Because Shares trade at market prices rather than NAV, Shares may trade at a price greater than NAV (premium) or less than NAV (discount). The Fund issues and redeems Shares at NAV only in large blocks known as "Creation Units," which only APs (typically, broker-dealers) may purchase or redeem. Creation Units of the Fund generally consist of at least 25,000 Shares, though this may change from time to time. The Fund generally issues and redeems Creation Units in exchange for a portfolio of securities closely approximating the holdings of the Fund (the "Deposit Securities") and/or a designated amount of cash.

Tax Information

Fund distributions are generally taxable as ordinary income, qualified dividend income, or capital gains (or a combination), unless your investment is in an individual retirement account ("IRA") or other tax-advantaged account. Distributions on investments made through tax-deferred arrangements may be taxed later upon withdrawal of assets from those accounts.

Financial Intermediary Compensation

If you purchase Shares through a broker-dealer or other financial intermediary (such as a bank) (an "Intermediary"), the Adviser or its affiliates may pay Intermediaries for certain activities related to the Fund, including participation in activities that are designed to make Intermediaries more knowledgeable about exchange traded products, including the Fund, or for other activities, such as marketing, educational training or other initiatives related to the sale or promotion of Shares. These payments may create a conflict of interest by influencing the Intermediary and your salesperson to recommend the Fund over another investment. Any such arrangements do not result in increased Fund expenses. Ask your salesperson or visit the Intermediary's website for more information.

TRUESHARES STRUCTURED OUTCOME (MAY) ETF

Investment Objective

The Fund seeks to provide investors with returns (before fees and expenses) that track those of the S&P 500 Price Return Index (the “S&P 500 Price Index”) while seeking to provide a buffer against the first 8% to 12% of S&P 500 Price Index losses, over the period from May 1, 2021 to April 30, 2022.

Fees and Expenses of the Fund

This table describes the fees and expenses that you may pay if you buy, hold or sell shares of the Fund (“Shares”). This table and the Example below do not include the brokerage commissions that investors may pay on their purchases and sales of Shares.

Shareholder Fees <i>(fees paid directly from your investment)</i>	None
Annual Fund Operating Expenses <i>(expenses that you pay each year as a percentage of the value of your investment)</i>	
Management Fees	0.79%
Distribution and/or Service (12b-1) Fees	0.00%
Other Expenses *	0.00%
Total Annual Fund Operating Expenses	0.79%

* Estimated for the current fiscal year.

Example

This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. The Example assumes that you invest \$10,000 in the Fund for the time periods indicated and then redeem all of your Shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the Fund’s operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

1 Year: \$81

3 Years: \$252

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Shares are held in a taxable account. These costs, which are not reflected in the Annual Fund Operating Expenses or in the Example, affect the Fund’s performance. Because the Fund is newly organized, portfolio turnover information is not yet available.

Principal Investment Strategy

The Fund is an actively-managed exchange-traded fund (“ETF”) that seeks to achieve its investment objective by investing substantially all of its assets in options that reference the S&P 500 Price Index. The Fund’s investment adviser, TrueMark Investments, LLC (“TrueMark”), and sub-adviser, SpiderRock Advisors, LLC (“SpiderRock”), will employ a “buffer protect” options strategy that uses such options to seek to achieve exposure to the S&P 500 Price Index while mitigating the first 8% to 12% decline in the S&P 500 Price Index (the “Buffer”) over a 12-month period beginning on a specified day each May (each, a “Roll Date”). The period from one Roll Date to the next Roll Date is referred to as the “Investment Period,” and the first day of the Investment Period is referred to as the “Initial Investment Day”).

The Fund will purchase call options and sell (write) put options on the S&P 500 Price Index or an ETF that tracks the S&P 500 Price Index on each Initial Investment Day with an expiration on the next Roll Date. An option gives the purchaser of the option the right to purchase (for a call option) or sell (for a put option) the underlying asset (or deliver cash equal to the value of an underlying index) at a specified price (“strike price”). In the event the underlying asset declines in value, the value of a put option will generally increase (and the value of a call option will generally decrease and may end up worthless), and in the event the underlying asset appreciates in value, the value of a put option will generally decrease and may end up worthless (and the value of a call option will generally increase).

On each Initial Investment Day, the Fund will sell (write) put options on the S&P 500 Price Index or an ETF that tracks the S&P 500 Price Index with a strike price within a range of approximately 8% to 12% lower than the current value of the S&P 500 Price Index or an ETF that tracks the S&P 500 Price Index. As the seller of these options, the Fund receives a premium from the buyer of the options, which the Fund invests in at-the-money call options on the S&P 500 Price Index or an ETF that tracks the S&P 500 Price Index (*i.e.*, call options having a strike price roughly equal to the current value of the S&P 500 Price Index or an ETF that tracks the S&P 500 Price Index). The relative price of the put options sold (written) by the Fund to the price of the call options purchased by the Fund will determine

the Fund's exposure to the S&P 500 Price Index during the Investment Period. **Due to the cost of the options used by the Fund, the correlation of the Fund's performance to that of the S&P 500 Price Index is expected to be less than if the Fund invested directly in the S&P 500 Price Index without using options, and could be substantially less.** This means that if the S&P 500 Price Index experiences gains for an Investment Period, the Fund may not realize gains to the same extent.

The Fund's strategy is to seek to protect investors from a decline of up to 8% to 12% in the performance of the S&P 500 Price Index from one Roll Date to the next Roll Date. When the Adviser or Sub-Adviser sells puts on the S&P 500 Price Index to create the buffer range, the proceeds are used to purchase calls at the money. However, not all puts generate the same premium relative to the downside exposure of the Fund. The Adviser will seek to deliver a buffer of 10% from the reference price of the S&P 500 Price Index on the first trading day of the month. However, the market could fluctuate on or after the buffer is set and this range allows for market condition volatility. **The Fund is not designed to protect against declines of more than 8% to 12% in the level of the S&P 500 Price Index, and there can be no guarantee that the Fund will be successful in implementing the buffer protect options strategy to avoid the first 8% to 12% decline.** Additionally, even if the Fund mitigates a decline in the performance of the S&P 500 Price Index from one Roll Date to the next Roll Date, the Fund's returns during the Investment Period (prior to the next Roll Date) may not reflect the buffer protect options strategy.

The Fund will invest in standardized exchange-listed options or in exchange-traded FLEXible EXchange Options ("FLEX Options"), which are customized exchange-traded option contracts available through the Chicago Board Option Exchange ("Cboe") that are guaranteed for settlement by The Options Clearing Corporation ("OCC"). FLEX Options provide investors with the ability to customize exercise prices, exercise styles, and expiration dates, while achieving price discovery in competitive, transparent, auction markets and avoiding the counterparty exposure of over-the-counter ("OTC") options positions. All FLEX Options in the Fund are European-style options (*i.e.*, they can only be exercised at the expiration date of the option) based on the S&P 500 Price Index or an ETF that tracks the S&P 500 Price Index and have an expiration date that is the last day of the Investment Period. In general, the Fund intends to invest in FLEX options only, as these options provide the best combination of OCC guarantees, price discovery, customization, and European-style settlement that is ideal for the Fund. However in certain unforeseen circumstances, listed options may be used by the Fund to provide an additional source of desired market exposure. The Fund also expects to invest in U.S. Treasury bonds.

The Fund is designed to provide the following outcomes during each individual Investment Period:

Change in the Returns of the S&P 500 Price Index	Expected Change in the Returns of the Fund
Declines between -8% and -12% (or more)	Declines 8% to 12% percentage points less than the S&P 500 Price Index (<i>e.g.</i> , if the S&P 500 Price Index returns -35%, the Fund is designed to return -23% to -27%)
Declines between 0% and -8%	No change
Appreciates	The Fund's returns will appreciate to a similar extent as the S&P 500 Price Index, but will be less than those of the S&P 500 Price Index due to the cost of the options used by the Fund

The following charts illustrate the hypothetical returns that the Fund seeks to provide in certain illustrative scenarios for a shareholder that purchases Fund shares on the Initial Investment Day and holds such shares for the entire Investment Period. These charts do not take into account payment by the Fund of fees and expenses and assume a buffer of 10%. **There is no guarantee that the Fund will be successful in providing these investment outcomes for any Investment Period.**

The Fund includes a mix of purchased and written (sold) put and call options structured to achieve the results described above. The Fund is designed to seek to achieve the results described above for investments made on the Initial Investment Day and held until the last day of the Investment Period. **Investments made on any day other than the Initial Investment Day may differ significantly, positively or negatively, from the results described above.** The Fund's website, www.true-shares.com, contains information about the Fund's holdings, and the level of the S&P 500 Price Index as of the Initial Investment Day and the prior business day to assist an investor in understanding and the range of results such investor can expect for investments made at times other than on the Initial Investment Day.

Additionally, the Fund's website provides information relating to the returns of the Fund, including the Fund's Buffer and its position relative to the S&P 500 Price Index on a daily basis.

The Fund's operations are intended to be continuous. It will not terminate and distribute its assets at the conclusion of each Investment Period. On each Roll Date, another Investment Period will commence and the Fund will invest in a new set of options.

The Fund is classified as "non-diversified" under the Investment Company Act of 1940, as amended (the "1940 Act").

Principal Investment Risks

The principal risks of investing in the Fund are summarized below. The principal risks are presented in alphabetical order to facilitate finding particular risks and comparing them with those of other funds. Each risk summarized below is considered a "principal risk" of investing in the Fund, regardless of the order in which it appears. As with any investment, there is a risk that you could lose all or a portion of your investment in the Fund. Some or all of these risks may adversely affect the Fund's net asset value per share ("NAV"), trading price, yield, total return and/or ability to meet its objectives.

- **Buffered Strategy Investment Risk.**

- *Buffered Loss Risk.* There can be no guarantee that the Fund will be successful in its strategy to provide buffer protection against S&P 500 Price Index losses if the S&P 500 Price Index decreases over the Investment Period by 8% or less. A shareholder may lose their entire investment. The Fund's strategy seeks to deliver returns that match the S&P 500 Price Index (but will be less than the S&P 500 Price Index due to the cost of the options used by the Fund), while limiting downside losses, if Shares are bought on the day on which the Fund enters into the options and held until those options expire at the end of each Investment Period. In the event an investor purchases Shares after the date on which the options were entered into or sells Shares prior to the expiration of the options, the buffer that the Fund seeks to provide may not be available. The Fund does not provide principal protection and an investor may experience significant losses on its investment, including the loss of its entire investment.
- *FLEX Options Risk.* The Fund may invest in FLEX Options issued and guaranteed for settlement by the OCC. The Fund bears the risk that the OCC will be unable or unwilling to perform its obligations under the FLEX Options contracts. Additionally, FLEX Options may be illiquid, and in such cases, the Fund may have difficulty closing out certain FLEX Options positions at desired times and prices.
- *Options Risk.* The Fund invests in options that derive their performance from the performance of the S&P 500 Price Index. Writing and buying options are speculative activities and entail investment exposures that are greater than their cost would suggest, meaning that a small investment in an option could have a substantial impact on the performance of the Fund. The Fund's use of call and put options can lead to losses because of adverse movements in the price or value of the underlying stock, index, or other asset, which may be magnified by certain features of the options. These risks are heightened when the Fund's portfolio managers use options to enhance the Fund's return or as a substitute for a position or security. When selling a call or put option, the Fund will receive a premium; however, this premium may not be enough to offset a loss incurred by the Fund if the price of the underlying asset is above or below, respectively, the strike price by an amount equal to or greater than the premium. The value of an option may be adversely affected if the market for the option becomes less liquid or smaller, and will be affected by changes in the value or yield of the option's underlying asset, an increase in interest rates, a change in the actual or perceived volatility of the stock market or the underlying asset and the remaining time to expiration. Additionally, the value of an option does not increase or decrease at the same rate as the underlying asset(s). The Fund's use of options, due to the cost of the options, will reduce the Fund's ability to get returns equal to the S&P 500 Price Index. This means that if the S&P 500 Price Index experiences gains for an Investment Period, the Fund will not benefit to the same extent from those gains. In addition, if the price of the underlying asset of an option is above the strike price of a written call option or below the strike price for a written put option, the value of the option, and consequently of the Fund, may decline significantly more than if the Fund invested directly in the underlying asset instead of using options. The Fund invests in options that derive their performance from the performance of the S&P 500 Price Index and can be volatile and involve various types and degrees of risks. The Fund could experience a loss if its options do not perform as anticipated, or are not correlated with the performance of their underlying stock or if the Fund is unable to purchase or liquidate a position because of an illiquid secondary market.
- *Purchase and Sale Timing Risk.* The Fund is designed to protect against the first 8% to 12% decline in the value of the S&P 500 Price Index and provide for participation in any gains, although not to the same extent, as the value of the S&P 500 Price Index, for a 12-month period from one Roll Date to the next Roll Date. Because the options purchased and written by the Fund will expire on the next Roll Date, if you purchase or sell Shares on a date other than a Roll Date or if you hold Shares for more or less than the time from the most recent Roll Date to the next Roll Date, the value of your investment in Shares may not be protected against the first 8% to 12% decline in the value of the S&P 500 Price Index and may not participate in a gain in the value of the S&P 500 Price Index for your investment period. The value of the options purchased and written by the Fund is dependent on, among other factors, the value, implied volatility, and implied dividend rate of the S&P 500 Price Index and interest rates, any or all of which may vary, sometimes significantly, during the period from the most recent Roll Date to the next Roll Date. Consequently, the value of the Fund may not directly track changes in the value of the S&P 500 Price Index in between Roll Dates.

- **Equity Market Risk.** The Fund invests in options that derive their performance from the S&P 500 Price Index, which is made up of common stocks. Common stocks are susceptible to general stock market fluctuations and to volatile increases and decreases in value as market confidence in and perceptions of their issuers change. These investor perceptions are based on various and unpredictable factors including: expectations regarding government, economic, monetary and fiscal policies; inflation and interest rates; economic expansion or contraction; and global or regional political, economic and banking crises.
- **ETF Risks.** The Fund is an ETF and, as a result of this structure, it is exposed to the following risks:
 - *Authorized Participants (“APs”), Market Makers, and Liquidity Providers Concentration Risk.* The Fund has a limited number of financial institutions that may act as APs. In addition, there may be a limited number of market makers and/or liquidity providers in the marketplace. To the extent either of the following events occur, Shares may trade at a material discount to NAV and possibly face delisting: (i) APs exit the business or otherwise become unable to process creation and/or redemption orders and no other APs step forward to perform these services, or (ii) market makers and/or liquidity providers exit the business or significantly reduce their business activities and no other entities step forward to perform their functions.
 - *Costs of Buying or Selling Shares.* Due to the costs of buying or selling Shares, including brokerage commissions imposed by brokers and bid/ask spreads, frequent trading of Shares may significantly reduce investment results and an investment in Shares may not be advisable for investors who anticipate regularly making small investments.
 - *Shares May Trade at Prices Other Than NAV.* As with all ETFs, Shares may be bought and sold in the secondary market at market prices. Although it is expected that the market price of Shares will approximate the Fund’s NAV, there may be times when the market price of Shares is more than the NAV intra-day (premium) or less than the NAV intra-day (discount) due to supply and demand of Shares or during periods of market volatility. This risk is heightened in times of market volatility, periods of steep market declines, and periods when there is limited trading activity for Shares in the secondary market, in which case such premiums or discounts may be significant.
 - *Trading.* Although Shares are listed for trading on the Cboe BZX Exchange, Inc. (the “Exchange”) and may be traded on U.S. exchanges other than the Exchange, there can be no assurance that Shares will trade with any volume, or at all, on any stock exchange. In stressed market conditions, the liquidity of Shares may begin to mirror the liquidity of the Fund’s underlying portfolio holdings, which can be significantly less liquid than Shares.
- **Management Risk.** The Fund is actively-managed and may not meet its investment objective based on the investment adviser’s and sub-adviser’s success or failure to implement investment strategies for the Fund.
- **New Fund Risk.** The Fund is a recently organized, non-diversified management investment company with no operating history. As a result, prospective investors have no track record or history on which to base their investment decision.
- **Non-Diversification Risk.** Although the Fund may invest in a variety of securities and instruments, the Fund will be considered to be non-diversified, which means that it may invest more of its assets in the securities of a single issuer or a smaller number of issuers than if it were a diversified fund. As a result, the Fund may be more exposed to the risks associated with and developments affecting an individual issuer or a smaller number of issuers than a fund that invests more widely. This may increase the Fund’s volatility and cause the performance of a relatively smaller number of issuers to have a greater impact on the Fund’s performance. However, the Fund intends to satisfy the asset diversification requirements for qualifying as a regulated investment company (“RIC”) under Subchapter M of the Internal Revenue Code of 1986, as amended (the “Code”).
- **Portfolio Turnover Risk.** Because the Fund may “turn over” some or all of its options as frequently as monthly, the Fund may incur high levels of transaction costs from commissions or mark-ups in the bid/offer spread. Higher portfolio turnover may result in the Fund paying higher levels of transaction costs and generating greater tax liabilities for shareholders. Portfolio turnover risk may cause the Fund’s performance to be less than you expect. While the turnover of the call options is not deemed “portfolio turnover” for accounting purposes, the economic impact to the Fund is similar to what could occur if the Fund experienced high portfolio turnover (e.g., in excess of 100% per year).
- **Tax Efficiency Risk.** A significant portion of income received from the Fund may be subject to tax at effective tax rates that are higher than the rates that would apply if the Fund were to engage in a different investment strategy. Additionally, the Fund’s investment strategy may require it to effect redemptions, in whole or in part, for cash. As a result, the Fund may be required to sell portfolio securities to obtain the cash needed to distribute redemption proceeds. This may cause the Fund to recognize investment income and/or capital gains or losses that it might not have recognized if it had completely satisfied the redemption in-kind. As a result, the Fund may be less tax efficient if it includes such a cash payment than if the in-kind redemption process was used exclusively. In addition, cash redemptions may incur higher brokerage costs than in-kind redemptions and these added costs may be borne by the Fund and negatively impact Fund performance. You should consult your tax advisor as to the tax consequences of purchasing, owning, and selling Shares.
- **U.S. Treasury Obligations Risk.** U.S. Treasury obligations may differ from other fixed income securities in their interest rates, maturities, times of issuance and other characteristics. Similar to other issuers, changes to the financial condition or credit rating of the U.S. government may cause the value of the Fund’s U.S. Treasury obligations to decline.

Performance

The Fund is new and therefore does not have a performance history for a full calendar year. In the future, performance information for the Fund will be presented in this section. Updated performance information is available on the Fund's website at www.true-shares.com or by calling the Fund toll free at 1-800-617-0004.

Management

Investment Adviser

TrueMark Investments, LLC serves as investment adviser to the Fund.

Sub-Adviser

SpiderRock Advisors, LLC serves as investment sub-adviser to the Fund

Portfolio Managers

Jordan C. Waldrep, CFA, Chief Investment Officer for the Adviser, Eric Metz, Chief Investment Officer for the Sub-Adviser and Fred Sloneker, Portfolio Manager for the Sub-Adviser, have been portfolio managers of the Fund since its inception in 2020.

Purchase and Sale of Shares

Shares are listed on the Exchange, and most investors will buy and sell Shares through brokers at market prices, rather than NAV. Because Shares trade at market prices rather than NAV, Shares may trade at a price greater than NAV (premium) or less than NAV (discount). The Fund issues and redeems Shares at NAV only in large blocks known as "Creation Units," which only APs (typically, broker-dealers) may purchase or redeem. Creation Units of the Fund generally consist of at least 25,000 Shares, though this may change from time to time. The Fund generally issues and redeems Creation Units in exchange for a portfolio of securities closely approximating the holdings of the Fund (the "Deposit Securities") and/or a designated amount of cash.

Tax Information

Fund distributions are generally taxable as ordinary income, qualified dividend income, or capital gains (or a combination), unless your investment is in an individual retirement account ("IRA") or other tax-advantaged account. Distributions on investments made through tax-deferred arrangements may be taxed later upon withdrawal of assets from those accounts.

Financial Intermediary Compensation

If you purchase Shares through a broker-dealer or other financial intermediary (such as a bank) (an "Intermediary"), the Adviser or its affiliates may pay Intermediaries for certain activities related to the Fund, including participation in activities that are designed to make Intermediaries more knowledgeable about exchange traded products, including the Fund, or for other activities, such as marketing, educational training or other initiatives related to the sale or promotion of Shares. These payments may create a conflict of interest by influencing the Intermediary and your salesperson to recommend the Fund over another investment. Any such arrangements do not result in increased Fund expenses. Ask your salesperson or visit the Intermediary's website for more information.

TRUESHARES STRUCTURED OUTCOME (JUNE) ETF

Investment Objective

The Fund seeks to provide investors with returns (before fees and expenses) that track those of the S&P 500 Price Return Index (the “S&P 500 Price Index”) while seeking to provide a buffer against the first 8% to 12% of S&P 500 Price Index losses, over the period from June 1, 2021 to May 31, 2022.

Fees and Expenses of the Fund

This table describes the fees and expenses that you may pay if you buy, hold or sell shares of the Fund (“Shares”). This table and the Example below do not include the brokerage commissions that investors may pay on their purchases and sales of Shares.

Shareholder Fees <i>(fees paid directly from your investment)</i>	None
Annual Fund Operating Expenses <i>(expenses that you pay each year as a percentage of the value of your investment)</i>	
Management Fees	0.79%
Distribution and/or Service (12b-1) Fees	0.00%
Other Expenses *	0.00%
Total Annual Fund Operating Expenses	0.79%

* Estimated for the current fiscal year.

Example

This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. The Example assumes that you invest \$10,000 in the Fund for the time periods indicated and then redeem all of your Shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the Fund’s operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

1 Year: \$81

3 Years: \$252

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Shares are held in a taxable account. These costs, which are not reflected in the Annual Fund Operating Expenses or in the Example, affect the Fund’s performance. Because the Fund is newly organized, portfolio turnover information is not yet available.

Principal Investment Strategy

The Fund is an actively-managed exchange-traded fund (“ETF”) that seeks to achieve its investment objective by investing substantially all of its assets in options that reference the S&P 500 Price Index. The Fund’s investment adviser, TrueMark Investments, LLC (“TrueMark”), and sub-adviser, SpiderRock Advisors, LLC (“SpiderRock”), will employ a “buffer protect” options strategy that uses such options to seek to achieve exposure to the S&P 500 Price Index while mitigating the first 8% to 12% decline in the S&P 500 Price Index (the “Buffer”) over a 12-month period beginning on a specified day each June (each, a “Roll Date”). The period from one Roll Date to the next Roll Date is referred to as the “Investment Period,” and the first day of the Investment Period is referred to as the “Initial Investment Day”).

The Fund will purchase call options and sell (write) put options on the S&P 500 Price Index or an ETF that tracks the S&P 500 Price Index on each Initial Investment Day with an expiration on the next Roll Date. An option gives the purchaser of the option the right to purchase (for a call option) or sell (for a put option) the underlying asset (or deliver cash equal to the value of an underlying index) at a specified price (“strike price”). In the event the underlying asset declines in value, the value of a put option will generally increase (and the value of a call option will generally decrease and may end up worthless), and in the event the underlying asset appreciates in value, the value of a put option will generally decrease and may end up worthless (and the value of a call option will generally increase).

On each Initial Investment Day, the Fund will sell (write) put options on the S&P 500 Price Index or an ETF that tracks the S&P 500 Price Index with a strike price within a range of approximately 8% to 12% lower than the current value of the S&P 500 Price Index or an ETF that tracks the S&P 500 Price Index. As the seller of these options, the Fund receives a premium from the buyer of the options, which the Fund invests in at-the-money call options on the S&P 500 Price Index or an ETF that tracks the S&P 500 Price Index (*i.e.*, call options having a strike price roughly equal to the current value of the S&P 500 Price Index or an ETF that tracks the S&P 500 Price Index). The relative price of the put options sold (written) by the Fund to the price of the call options purchased by the Fund will determine

the Fund's exposure to the S&P 500 Price Index during the Investment Period. **Due to the cost of the options used by the Fund, the correlation of the Fund's performance to that of the S&P 500 Price Index is expected to be less than if the Fund invested directly in the S&P 500 Price Index without using options, and could be substantially less.** This means that if the S&P 500 Price Index experiences gains for an Investment Period, the Fund may not realize gains to the same extent.

The Fund's strategy is to seek to protect investors from a decline of up to 8% to 12% in the performance of the S&P 500 Price Index from one Roll Date to the next Roll Date. When the Adviser or Sub-Adviser sells puts on the S&P 500 Price Index to create the buffer range, the proceeds are used to purchase calls at the money. However, not all puts generate the same premium relative to the downside exposure of the Fund. The Adviser will seek to deliver a buffer of 10% from the reference price of the S&P 500 Price Index on the first trading day of the month. However, the market could fluctuate on or after the buffer is set and this range allows for market condition volatility. **The Fund is not designed to protect against declines of more than 8% to 12% in the level of the S&P 500 Price Index, and there can be no guarantee that the Fund will be successful in implementing the buffer protect options strategy to avoid the first 8% to 12% decline.** Additionally, even if the Fund mitigates a decline in the performance of the S&P 500 Price Index from one Roll Date to the next Roll Date, the Fund's returns during the Investment Period (prior to the next Roll Date) may not reflect the buffer protect options strategy.

The Fund will invest in standardized exchange-listed options or in exchange-traded FLEXible EXchange Options ("FLEX Options"), which are customized exchange-traded option contracts available through the Chicago Board Option Exchange ("Cboe") that are guaranteed for settlement by The Options Clearing Corporation ("OCC"). FLEX Options provide investors with the ability to customize exercise prices, exercise styles, and expiration dates, while achieving price discovery in competitive, transparent, auction markets and avoiding the counterparty exposure of over-the-counter ("OTC") options positions. All FLEX Options in the Fund are European-style options (*i.e.*, they can only be exercised at the expiration date of the option) based on the S&P 500 Price Index or an ETF that tracks the S&P 500 Price Index and have an expiration date that is the last day of the Investment Period. In general, the Fund intends to invest in FLEX options only, as these options provide the best combination of OCC guarantees, price discovery, customization, and European-style settlement that is ideal for the Fund. However in certain unforeseen circumstances, listed options may be used by the Fund to provide an additional source of desired market exposure. The Fund also expects to invest in U.S. Treasury bonds.

The Fund is designed to provide the following outcomes during each individual Investment Period:

Change in the Returns of the S&P 500 Price Index	Expected Change in the Returns of the Fund
Declines between -8% and -12% (or more)	Declines 8% to 12% percentage points less than the S&P 500 Price Index (<i>e.g.</i> , if the S&P 500 Price Index returns -35%, the Fund is designed to return -23% to -27%)
Declines between 0% and -8%	No change
Appreciates	The Fund's returns will appreciate to a similar extent as the S&P 500 Price Index, but will be less than those of the S&P 500 Price Index due to the cost of the options used by the Fund

The following charts illustrate the hypothetical returns that the Fund seeks to provide in certain illustrative scenarios for a shareholder that purchases Fund shares on the Initial Investment Day and holds such shares for the entire Investment Period. These charts do not take into account payment by the Fund of fees and expenses and assume a buffer of 10%. **There is no guarantee that the Fund will be successful in providing these investment outcomes for any Investment Period.**

The Fund includes a mix of purchased and written (sold) put and call options structured to achieve the results described above. The Fund is designed to seek to achieve the results described above for investments made on the Initial Investment Day and held until the last day of the Investment Period. **Investments made on any day other than the Initial Investment Day may differ significantly, positively or negatively, from the results described above.** The Fund's website, www.true-shares.com, contains information about the Fund's holdings, and the level of the S&P 500 Price Index as of the Initial Investment Day and the prior business day to assist an investor in understanding and the range of results such investor can expect for investments made at times other than on the Initial Investment Day.

Additionally, the Fund's website provides information relating to the returns of the Fund, including the Fund's Buffer and its position relative to the S&P 500 Price Index on a daily basis.

The Fund's operations are intended to be continuous. It will not terminate and distribute its assets at the conclusion of each Investment Period. On each Roll Date, another Investment Period will commence and the Fund will invest in a new set of options.

The Fund is classified as "non-diversified" under the Investment Company Act of 1940, as amended (the "1940 Act").

Principal Investment Risks

The principal risks of investing in the Fund are summarized below. The principal risks are presented in alphabetical order to facilitate finding particular risks and comparing them with those of other funds. Each risk summarized below is considered a "principal risk" of investing in the Fund, regardless of the order in which it appears. As with any investment, there is a risk that you could lose all or a portion of your investment in the Fund. Some or all of these risks may adversely affect the Fund's net asset value per share ("NAV"), trading price, yield, total return and/or ability to meet its objectives.

- **Buffered Strategy Investment Risk.**

- *Buffered Loss Risk.* There can be no guarantee that the Fund will be successful in its strategy to provide buffer protection against S&P 500 Price Index losses if the S&P 500 Price Index decreases over the Investment Period by 8% or less. A shareholder may lose their entire investment. The Fund's strategy seeks to deliver returns that match the S&P 500 Price Index (but will be less than the S&P 500 Price Index due to the cost of the options used by the Fund), while limiting downside losses, if Shares are bought on the day on which the Fund enters into the options and held until those options expire at the end of each Investment Period. In the event an investor purchases Shares after the date on which the options were entered into or sells Shares prior to the expiration of the options, the buffer that the Fund seeks to provide may not be available. The Fund does not provide principal protection and an investor may experience significant losses on its investment, including the loss of its entire investment.
- *FLEX Options Risk.* The Fund may invest in FLEX Options issued and guaranteed for settlement by the OCC. The Fund bears the risk that the OCC will be unable or unwilling to perform its obligations under the FLEX Options contracts. Additionally, FLEX Options may be illiquid, and in such cases, the Fund may have difficulty closing out certain FLEX Options positions at desired times and prices.
- *Options Risk.* The Fund invests in options that derive their performance from the performance of the S&P 500 Price Index. Writing and buying options are speculative activities and entail investment exposures that are greater than their cost would suggest, meaning that a small investment in an option could have a substantial impact on the performance of the Fund. The Fund's use of call and put options can lead to losses because of adverse movements in the price or value of the underlying stock, index, or other asset, which may be magnified by certain features of the options. These risks are heightened when the Fund's portfolio managers use options to enhance the Fund's return or as a substitute for a position or security. When selling a call or put option, the Fund will receive a premium; however, this premium may not be enough to offset a loss incurred by the Fund if the price of the underlying asset is above or below, respectively, the strike price by an amount equal to or greater than the premium. The value of an option may be adversely affected if the market for the option becomes less liquid or smaller, and will be affected by changes in the value or yield of the option's underlying asset, an increase in interest rates, a change in the actual or perceived volatility of the stock market or the underlying asset and the remaining time to expiration. Additionally, the value of an option does not increase or decrease at the same rate as the underlying asset(s). The Fund's use of options, due to the cost of the options, will reduce the Fund's ability to get returns equal to the S&P 500 Price Index. This means that if the S&P 500 Price Index experiences gains for an Investment Period, the Fund will not benefit to the same extent from those gains. In addition, if the price of the underlying asset of an option is above the strike price of a written call option or below the strike price for a written put option, the value of the option, and consequently of the Fund, may decline significantly more than if the Fund invested directly in the underlying asset instead of using options. The Fund invests in options that derive their performance from the performance of the S&P 500 Price Index and can be volatile and involve various types and degrees of risks. The Fund could experience a loss if its options do not perform as anticipated, or are not correlated with the performance of their underlying stock or if the Fund is unable to purchase or liquidate a position because of an illiquid secondary market.
- *Purchase and Sale Timing Risk.* The Fund is designed to protect against the first 8% to 12% decline in the value of the S&P 500 Price Index and provide for participation in any gains, although not to the same extent, as the value of the S&P 500 Price Index, for a 12-month period from one Roll Date to the next Roll Date. Because the options purchased and written by the Fund will expire on the next Roll Date, if you purchase or sell Shares on a date other than a Roll Date or if you hold Shares for more or less than the time from the most recent Roll Date to the next Roll Date, the value of your investment in Shares may not be protected against the first 8% to 12% decline in the value of the S&P 500 Price Index and may not participate in a gain in the value of the S&P 500 Price Index for your investment period. The value of the options purchased and written by the Fund is dependent on, among other factors, the value, implied volatility, and implied dividend rate of the S&P 500 Price Index and interest rates, any or all of which may vary, sometimes significantly, during the period from the most recent Roll Date to the next Roll Date. Consequently, the value of the Fund may not directly track changes in the value of the S&P 500 Price Index in between Roll Dates.

- **Equity Market Risk.** The Fund invests in options that derive their performance from the S&P 500 Price Index, which is made up of common stocks. Common stocks are susceptible to general stock market fluctuations and to volatile increases and decreases in value as market confidence in and perceptions of their issuers change. These investor perceptions are based on various and unpredictable factors including: expectations regarding government, economic, monetary and fiscal policies; inflation and interest rates; economic expansion or contraction; and global or regional political, economic and banking crises.
- **ETF Risks.** The Fund is an ETF and, as a result of this structure, it is exposed to the following risks:
 - *Authorized Participants (“APs”), Market Makers, and Liquidity Providers Concentration Risk.* The Fund has a limited number of financial institutions that may act as APs. In addition, there may be a limited number of market makers and/or liquidity providers in the marketplace. To the extent either of the following events occur, Shares may trade at a material discount to NAV and possibly face delisting: (i) APs exit the business or otherwise become unable to process creation and/or redemption orders and no other APs step forward to perform these services, or (ii) market makers and/or liquidity providers exit the business or significantly reduce their business activities and no other entities step forward to perform their functions.
 - *Costs of Buying or Selling Shares.* Due to the costs of buying or selling Shares, including brokerage commissions imposed by brokers and bid/ask spreads, frequent trading of Shares may significantly reduce investment results and an investment in Shares may not be advisable for investors who anticipate regularly making small investments.
 - *Shares May Trade at Prices Other Than NAV.* As with all ETFs, Shares may be bought and sold in the secondary market at market prices. Although it is expected that the market price of Shares will approximate the Fund’s NAV, there may be times when the market price of Shares is more than the NAV intra-day (premium) or less than the NAV intra-day (discount) due to supply and demand of Shares or during periods of market volatility. This risk is heightened in times of market volatility, periods of steep market declines, and periods when there is limited trading activity for Shares in the secondary market, in which case such premiums or discounts may be significant.
 - *Trading.* Although Shares are listed for trading on the Cboe BZX Exchange, Inc. (the “Exchange”) and may be traded on U.S. exchanges other than the Exchange, there can be no assurance that Shares will trade with any volume, or at all, on any stock exchange. In stressed market conditions, the liquidity of Shares may begin to mirror the liquidity of the Fund’s underlying portfolio holdings, which can be significantly less liquid than Shares.
- **Management Risk.** The Fund is actively-managed and may not meet its investment objective based on the investment adviser’s and sub-adviser’s success or failure to implement investment strategies for the Fund.
- **New Fund Risk.** The Fund is a recently organized, non-diversified management investment company with no operating history. As a result, prospective investors have no track record or history on which to base their investment decision.
- **Non-Diversification Risk.** Although the Fund may invest in a variety of securities and instruments, the Fund will be considered to be non-diversified, which means that it may invest more of its assets in the securities of a single issuer or a smaller number of issuers than if it were a diversified fund. As a result, the Fund may be more exposed to the risks associated with and developments affecting an individual issuer or a smaller number of issuers than a fund that invests more widely. This may increase the Fund’s volatility and cause the performance of a relatively smaller number of issuers to have a greater impact on the Fund’s performance. However, the Fund intends to satisfy the asset diversification requirements for qualifying as a regulated investment company (“RIC”) under Subchapter M of the Internal Revenue Code of 1986, as amended (the “Code”).
- **Portfolio Turnover Risk.** Because the Fund may “turn over” some or all of its options as frequently as monthly, the Fund may incur high levels of transaction costs from commissions or mark-ups in the bid/offer spread. Higher portfolio turnover may result in the Fund paying higher levels of transaction costs and generating greater tax liabilities for shareholders. Portfolio turnover risk may cause the Fund’s performance to be less than you expect. While the turnover of the call options is not deemed “portfolio turnover” for accounting purposes, the economic impact to the Fund is similar to what could occur if the Fund experienced high portfolio turnover (e.g., in excess of 100% per year).
- **Tax Efficiency Risk.** A significant portion of income received from the Fund may be subject to tax at effective tax rates that are higher than the rates that would apply if the Fund were to engage in a different investment strategy. Additionally, the Fund’s investment strategy may require it to effect redemptions, in whole or in part, for cash. As a result, the Fund may be required to sell portfolio securities to obtain the cash needed to distribute redemption proceeds. This may cause the Fund to recognize investment income and/or capital gains or losses that it might not have recognized if it had completely satisfied the redemption in-kind. As a result, the Fund may be less tax efficient if it includes such a cash payment than if the in-kind redemption process was used exclusively. In addition, cash redemptions may incur higher brokerage costs than in-kind redemptions and these added costs may be borne by the Fund and negatively impact Fund performance. You should consult your tax advisor as to the tax consequences of purchasing, owning, and selling Shares.
- **U.S. Treasury Obligations Risk.** U.S. Treasury obligations may differ from other fixed income securities in their interest rates, maturities, times of issuance and other characteristics. Similar to other issuers, changes to the financial condition or credit rating of the U.S. government may cause the value of the Fund’s U.S. Treasury obligations to decline.

Performance

The Fund is new and therefore does not have a performance history for a full calendar year. In the future, performance information for the Fund will be presented in this section. Updated performance information is available on the Fund's website at www.true-shares.com or by calling the Fund toll free at 1-800-617-0004.

Management

Investment Adviser

TrueMark Investments, LLC serves as investment adviser to the Fund.

Sub-Adviser

SpiderRock Advisors, LLC serves as investment sub-adviser to the Fund

Portfolio Managers

Jordan C. Waldrep, CFA, Chief Investment Officer for the Adviser, Eric Metz, Chief Investment Officer for the Sub-Adviser and Fred Sloneker, Portfolio Manager for the Sub-Adviser, have been portfolio managers of the Fund since its inception in 2020.

Purchase and Sale of Shares

Shares are listed on the Exchange, and most investors will buy and sell Shares through brokers at market prices, rather than NAV. Because Shares trade at market prices rather than NAV, Shares may trade at a price greater than NAV (premium) or less than NAV (discount). The Fund issues and redeems Shares at NAV only in large blocks known as "Creation Units," which only APs (typically, broker-dealers) may purchase or redeem. Creation Units of the Fund generally consist of at least 25,000 Shares, though this may change from time to time. The Fund generally issues and redeems Creation Units in exchange for a portfolio of securities closely approximating the holdings of the Fund (the "Deposit Securities") and/or a designated amount of cash.

Tax Information

Fund distributions are generally taxable as ordinary income, qualified dividend income, or capital gains (or a combination), unless your investment is in an individual retirement account ("IRA") or other tax-advantaged account. Distributions on investments made through tax-deferred arrangements may be taxed later upon withdrawal of assets from those accounts.

Financial Intermediary Compensation

If you purchase Shares through a broker-dealer or other financial intermediary (such as a bank) (an "Intermediary"), the Adviser or its affiliates may pay Intermediaries for certain activities related to the Fund, including participation in activities that are designed to make Intermediaries more knowledgeable about exchange traded products, including the Fund, or for other activities, such as marketing, educational training or other initiatives related to the sale or promotion of Shares. These payments may create a conflict of interest by influencing the Intermediary and your salesperson to recommend the Fund over another investment. Any such arrangements do not result in increased Fund expenses. Ask your salesperson or visit the Intermediary's website for more information.

TRUESHARES STRUCTURED OUTCOME (JULY) ETF

Investment Objective

The Fund seeks to provide investors with returns (before fees and expenses) that track those of the S&P 500 Price Return Index (the “S&P 500 Price Index”) while seeking to provide a buffer against the first 8% to 12% of S&P 500 Price Index losses, over the period from July 1, 2020 to June 30, 2021.

Fees and Expenses of the Fund

This table describes the fees and expenses that you may pay if you buy, hold or sell shares of the Fund (“Shares”). This table and the Example below do not include the brokerage commissions that investors may pay on their purchases and sales of Shares.

Shareholder Fees <i>(fees paid directly from your investment)</i>	None
Annual Fund Operating Expenses <i>(expenses that you pay each year as a percentage of the value of your investment)</i>	
Management Fees	0.79%
Distribution and/or Service (12b-1) Fees	0.00%
Other Expenses*	0.00%
Total Annual Fund Operating Expenses	0.79%

* Estimated for the current fiscal year.

Example

This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. The Example assumes that you invest \$10,000 in the Fund for the time periods indicated and then redeem all of your Shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the Fund’s operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

1 Year: \$81

3 Years: \$252

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Shares are held in a taxable account. These costs, which are not reflected in the Annual Fund Operating Expenses or in the Example, affect the Fund’s performance. Because the Fund is newly organized, portfolio turnover information is not yet available.

Principal Investment Strategy

The Fund is an actively-managed exchange-traded fund (“ETF”) that seeks to achieve its investment objective by investing substantially all of its assets in options that reference the S&P 500 Price Index. The Fund’s investment adviser, TrueMark Investments, LLC (“TrueMark”), and sub-adviser, SpiderRock Advisors, LLC (“SpiderRock”), will employ a “buffer protect” options strategy that uses such options to seek to achieve exposure to the S&P 500 Price Index while mitigating the first 8% to 12% decline in the S&P 500 Price Index (the “Buffer”) over a 12-month period beginning on a specified day each July (each, a “Roll Date”). The period from one Roll Date to the next Roll Date is referred to as the “Investment Period,” and the first day of the Investment Period is referred to as the “Initial Investment Day”).

The Fund will purchase call options and sell (write) put options on the S&P 500 Price Index or an ETF that tracks the S&P 500 Price Index on each Initial Investment Day with an expiration on the next Roll Date. An option gives the purchaser of the option the right to purchase (for a call option) or sell (for a put option) the underlying asset (or deliver cash equal to the value of an underlying index) at a specified price (“strike price”). In the event the underlying asset declines in value, the value of a put option will generally increase (and the value of a call option will generally decrease and may end up worthless), and in the event the underlying asset appreciates in value, the value of a put option will generally decrease and may end up worthless (and the value of a call option will generally increase).

On each Initial Investment Day, the Fund will sell (write) put options on the S&P 500 Price Index or an ETF that tracks the S&P 500 Price Index with a strike price within a range of approximately 8% to 12% lower than the current value of the S&P 500 Price Index or an ETF that tracks the S&P 500 Price Index. As the seller of these options, the Fund receives a premium from the buyer of the options, which the Fund invests in at-the-money call options on the S&P 500 Price Index or an ETF that tracks the S&P 500 Price Index (*i.e.*, call options having a strike price roughly equal to the current value of the S&P 500 Price Index or an ETF that tracks the S&P 500 Price Index). The relative price of the put options sold (written) by the Fund to the price of the call options purchased by the Fund will determine

the Fund's exposure to the S&P 500 Price Index during the Investment Period. **Due to the cost of the options used by the Fund, the correlation of the Fund's performance to that of the S&P 500 Price Index is expected to be less than if the Fund invested directly in the S&P 500 Price Index without using options, and could be substantially less.** This means that if the S&P 500 Price Index experiences gains for an Investment Period, the Fund may not realize gains to the same extent.

The Fund's strategy is to seek to protect investors from a decline of up to 8% to 12% in the performance of the S&P 500 Price Index from one Roll Date to the next Roll Date. When the Adviser or Sub-Adviser sells puts on the S&P 500 Price Index to create the buffer range, the proceeds are used to purchase calls at the money. However, not all puts generate the same premium relative to the downside exposure of the Fund. The Adviser will seek to deliver a buffer of 10% from the reference price of the S&P 500 Price Index on the first trading day of the month. However, the market could fluctuate on or after the buffer is set and this range allows for market condition volatility. **The Fund is not designed to protect against declines of more than 8% to 12% in the level of the S&P 500 Price Index, and there can be no guarantee that the Fund will be successful in implementing the buffer protect options strategy to avoid the first 8% to 12% decline.** Additionally, even if the Fund mitigates a decline in the performance of the S&P 500 Price Index from one Roll Date to the next Roll Date, the Fund's returns during the Investment Period (prior to the next Roll Date) may not reflect the buffer protect options strategy.

The Fund will invest in standardized exchange-listed options or in exchange-traded FLEXible EXchange Options ("FLEX Options"), which are customized exchange-traded option contracts available through the Chicago Board Option Exchange ("Cboe") that are guaranteed for settlement by The Options Clearing Corporation ("OCC"). FLEX Options provide investors with the ability to customize exercise prices, exercise styles, and expiration dates, while achieving price discovery in competitive, transparent, auction markets and avoiding the counterparty exposure of over-the-counter ("OTC") options positions. All FLEX Options in the Fund are European-style options (*i.e.*, they can only be exercised at the expiration date of the option) based on the S&P 500 Price Index or an ETF that tracks the S&P 500 Price Index and have an expiration date that is the last day of the Investment Period. In general, the Fund intends to invest in FLEX options only, as these options provide the best combination of OCC guarantees, price discovery, customization, and European-style settlement that is ideal for the Fund. However in certain unforeseen circumstances, listed options may be used by the Fund to provide an additional source of desired market exposure. The Fund also expects to invest in U.S. Treasury bonds.

The Fund is designed to provide the following outcomes during each individual Investment Period:

Change in the Returns of the S&P 500 Price Index	Expected Change in the Returns of the Fund
Declines between -8% and -12% (or more)	Declines 8% to 12% percentage points less than the S&P 500 Price Index (<i>e.g.</i> , if the S&P 500 Price Index returns -35%, the Fund is designed to return -23% to -27%)
Declines between 0% and -8%	No change
Appreciates	The Fund's returns will appreciate to a similar extent as the S&P 500 Price Index, but will be less than those of the S&P 500 Price Index due to the cost of the options used by the Fund

The following charts illustrate the hypothetical returns that the Fund seeks to provide in certain illustrative scenarios for a shareholder that purchases Fund shares on the Initial Investment Day and holds such shares for the entire Investment Period. These charts do not take into account payment by the Fund of fees and expenses and assume a buffer of 10%. **There is no guarantee that the Fund will be successful in providing these investment outcomes for any Investment Period.**

The Fund includes a mix of purchased and written (sold) put and call options structured to achieve the results described above. The Fund is designed to seek to achieve the results described above for investments made on the Initial Investment Day and held until the last day of the Investment Period. **Investments made on any day other than the Initial Investment Day may differ significantly, positively or negatively, from the results described above.** The Fund's website, www.true-shares.com, contains information about the Fund's holdings, and the level of the S&P 500 Price Index as of the Initial Investment Day and the prior business day to assist an investor in understanding and the range of results such investor can expect for investments made at times other than on the Initial Investment Day.

Additionally, the Fund's website provides information relating to the returns of the Fund, including the Fund's Buffer and its position relative to the S&P 500 Price Index on a daily basis.

The Fund's operations are intended to be continuous. It will not terminate and distribute its assets at the conclusion of each Investment Period. On each Roll Date, another Investment Period will commence and the Fund will invest in a new set of options.

The Fund is classified as "non-diversified" under the Investment Company Act of 1940, as amended (the "1940 Act").

Principal Investment Risks

The principal risks of investing in the Fund are summarized below. The principal risks are presented in alphabetical order to facilitate finding particular risks and comparing them with those of other funds. Each risk summarized below is considered a "principal risk" of investing in the Fund, regardless of the order in which it appears. As with any investment, there is a risk that you could lose all or a portion of your investment in the Fund. Some or all of these risks may adversely affect the Fund's net asset value per share ("NAV"), trading price, yield, total return and/or ability to meet its objectives.

- **Buffered Strategy Investment Risk.**

- *Buffered Loss Risk.* There can be no guarantee that the Fund will be successful in its strategy to provide buffer protection against S&P 500 Price Index losses if the S&P 500 Price Index decreases over the Investment Period by 8% or less. A shareholder may lose their entire investment. The Fund's strategy seeks to deliver returns that match the S&P 500 Price Index (but will be less than the S&P 500 Price Index due to the cost of the options used by the Fund), while limiting downside losses, if Shares are bought on the day on which the Fund enters into the options and held until those options expire at the end of each Investment Period. In the event an investor purchases Shares after the date on which the options were entered into or sells Shares prior to the expiration of the options, the buffer that the Fund seeks to provide may not be available. The Fund does not provide principal protection and an investor may experience significant losses on its investment, including the loss of its entire investment.
- *FLEX Options Risk.* The Fund may invest in FLEX Options issued and guaranteed for settlement by the OCC. The Fund bears the risk that the OCC will be unable or unwilling to perform its obligations under the FLEX Options contracts. Additionally, FLEX Options may be illiquid, and in such cases, the Fund may have difficulty closing out certain FLEX Options positions at desired times and prices.
- *Options Risk.* The Fund invests in options that derive their performance from the performance of the S&P 500 Price Index. Writing and buying options are speculative activities and entail investment exposures that are greater than their cost would suggest, meaning that a small investment in an option could have a substantial impact on the performance of the Fund. The Fund's use of call and put options can lead to losses because of adverse movements in the price or value of the underlying stock, index, or other asset, which may be magnified by certain features of the options. These risks are heightened when the Fund's portfolio managers use options to enhance the Fund's return or as a substitute for a position or security. When selling a call or put option, the Fund will receive a premium; however, this premium may not be enough to offset a loss incurred by the Fund if the price of the underlying asset is above or below, respectively, the strike price by an amount equal to or greater than the premium. The value of an option may be adversely affected if the market for the option becomes less liquid or smaller, and will be affected by changes in the value or yield of the option's underlying asset, an increase in interest rates, a change in the actual or perceived volatility of the stock market or the underlying asset and the remaining time to expiration. Additionally, the value of an option does not increase or decrease at the same rate as the underlying asset(s). The Fund's use of options, due to the cost of the options, will reduce the Fund's ability to get returns equal to the S&P 500 Price Index. This means that if the S&P 500 Price Index experiences gains for an Investment Period, the Fund will not benefit to the same extent from those gains. In addition, if the price of the underlying asset of an option is above the strike price of a written call option or below the strike price for a written put option, the value of the option, and consequently of the Fund, may decline significantly more than if the Fund invested directly in the underlying asset instead of using options. The Fund invests in options that derive their performance from the performance of the S&P 500 Price Index and can be volatile and involve various types and degrees of risks. The Fund could experience a loss if its options do not perform as anticipated, or are not correlated with the performance of their underlying stock or if the Fund is unable to purchase or liquidate a position because of an illiquid secondary market.
- *Purchase and Sale Timing Risk.* The Fund is designed to protect against the first 8% to 12% decline in the value of the S&P 500 Price Index and provide for participation in any gains, although not to the same extent, as the value of the S&P 500 Price Index, for a 12-month period from one Roll Date to the next Roll Date. Because the options purchased and written by the Fund will expire on the next Roll Date, if you purchase or sell Shares on a date other than a Roll Date or if you hold Shares for more or less than the time from the most recent Roll Date to the next Roll Date, the value of your investment in Shares may not be protected against the first 8% to 12% decline in the value of the S&P 500 Price Index and may not participate in a gain in the value of the S&P 500 Price Index for your investment period. The value of the options purchased and written by the Fund is dependent on, among other factors, the value, implied volatility, and implied dividend rate of the S&P 500 Price Index and interest rates, any or all of which may vary, sometimes significantly, during the period from the most recent Roll Date to the next Roll Date. Consequently, the value of the Fund may not directly track changes in the value of the S&P 500 Price Index in between Roll Dates.

- **Equity Market Risk.** The Fund invests in options that derive their performance from the S&P 500 Price Index, which is made up of common stocks. Common stocks are susceptible to general stock market fluctuations and to volatile increases and decreases in value as market confidence in and perceptions of their issuers change. These investor perceptions are based on various and unpredictable factors including: expectations regarding government, economic, monetary and fiscal policies; inflation and interest rates; economic expansion or contraction; and global or regional political, economic and banking crises.
- **ETF Risks.** The Fund is an ETF and, as a result of this structure, it is exposed to the following risks:
 - *Authorized Participants (“APs”), Market Makers, and Liquidity Providers Concentration Risk.* The Fund has a limited number of financial institutions that may act as APs. In addition, there may be a limited number of market makers and/or liquidity providers in the marketplace. To the extent either of the following events occur, Shares may trade at a material discount to NAV and possibly face delisting: (i) APs exit the business or otherwise become unable to process creation and/or redemption orders and no other APs step forward to perform these services, or (ii) market makers and/or liquidity providers exit the business or significantly reduce their business activities and no other entities step forward to perform their functions.
 - *Costs of Buying or Selling Shares.* Due to the costs of buying or selling Shares, including brokerage commissions imposed by brokers and bid/ask spreads, frequent trading of Shares may significantly reduce investment results and an investment in Shares may not be advisable for investors who anticipate regularly making small investments.
 - *Shares May Trade at Prices Other Than NAV.* As with all ETFs, Shares may be bought and sold in the secondary market at market prices. Although it is expected that the market price of Shares will approximate the Fund’s NAV, there may be times when the market price of Shares is more than the NAV intra-day (premium) or less than the NAV intra-day (discount) due to supply and demand of Shares or during periods of market volatility. This risk is heightened in times of market volatility, periods of steep market declines, and periods when there is limited trading activity for Shares in the secondary market, in which case such premiums or discounts may be significant.
 - *Trading.* Although Shares are listed for trading on the Cboe BZX Exchange, Inc. (the “Exchange”) and may be traded on U.S. exchanges other than the Exchange, there can be no assurance that Shares will trade with any volume, or at all, on any stock exchange. In stressed market conditions, the liquidity of Shares may begin to mirror the liquidity of the Fund’s underlying portfolio holdings, which can be significantly less liquid than Shares.
- **Management Risk.** The Fund is actively-managed and may not meet its investment objective based on the investment adviser’s and sub-adviser’s success or failure to implement investment strategies for the Fund.
- **New Fund Risk.** The Fund is a recently organized, non-diversified management investment company with no operating history. As a result, prospective investors have no track record or history on which to base their investment decision.
- **Non-Diversification Risk.** Although the Fund may invest in a variety of securities and instruments, the Fund will be considered to be non-diversified, which means that it may invest more of its assets in the securities of a single issuer or a smaller number of issuers than if it were a diversified fund. As a result, the Fund may be more exposed to the risks associated with and developments affecting an individual issuer or a smaller number of issuers than a fund that invests more widely. This may increase the Fund’s volatility and cause the performance of a relatively smaller number of issuers to have a greater impact on the Fund’s performance. However, the Fund intends to satisfy the asset diversification requirements for qualifying as a regulated investment company (“RIC”) under Subchapter M of the Internal Revenue Code of 1986, as amended (the “Code”).
- **Portfolio Turnover Risk.** Because the Fund may “turn over” some or all of its options as frequently as monthly, the Fund may incur high levels of transaction costs from commissions or mark-ups in the bid/offer spread. Higher portfolio turnover may result in the Fund paying higher levels of transaction costs and generating greater tax liabilities for shareholders. Portfolio turnover risk may cause the Fund’s performance to be less than you expect. While the turnover of the call options is not deemed “portfolio turnover” for accounting purposes, the economic impact to the Fund is similar to what could occur if the Fund experienced high portfolio turnover (e.g., in excess of 100% per year).
- **Tax Efficiency Risk.** A significant portion of income received from the Fund may be subject to tax at effective tax rates that are higher than the rates that would apply if the Fund were to engage in a different investment strategy. Additionally, the Fund’s investment strategy may require it to effect redemptions, in whole or in part, for cash. As a result, the Fund may be required to sell portfolio securities to obtain the cash needed to distribute redemption proceeds. This may cause the Fund to recognize investment income and/or capital gains or losses that it might not have recognized if it had completely satisfied the redemption in-kind. As a result, the Fund may be less tax efficient if it includes such a cash payment than if the in-kind redemption process was used exclusively. In addition, cash redemptions may incur higher brokerage costs than in-kind redemptions and these added costs may be borne by the Fund and negatively impact Fund performance. You should consult your tax advisor as to the tax consequences of purchasing, owning, and selling Shares.
- **U.S. Treasury Obligations Risk.** U.S. Treasury obligations may differ from other fixed income securities in their interest rates, maturities, times of issuance and other characteristics. Similar to other issuers, changes to the financial condition or credit rating of the U.S. government may cause the value of the Fund’s U.S. Treasury obligations to decline.

Performance

The Fund is new and therefore does not have a performance history for a full calendar year. In the future, performance information for the Fund will be presented in this section. Updated performance information is available on the Fund's website at www.true-shares.com or by calling the Fund toll free at 1-800-617-0004.

Management

Investment Adviser

TrueMark Investments, LLC serves as investment adviser to the Fund.

Sub-Adviser

SpiderRock Advisors, LLC serves as investment sub-adviser to the Fund

Portfolio Managers

Jordan C. Waldrep, CFA, Chief Investment Officer for the Adviser, Eric Metz, Chief Investment Officer for the Sub-Adviser and Fred Sloneker, Portfolio Manager for the Sub-Adviser, have been portfolio managers of the Fund since its inception in 2020.

Purchase and Sale of Shares

Shares are listed on the Exchange, and most investors will buy and sell Shares through brokers at market prices, rather than NAV. Because Shares trade at market prices rather than NAV, Shares may trade at a price greater than NAV (premium) or less than NAV (discount). The Fund issues and redeems Shares at NAV only in large blocks known as "Creation Units," which only APs (typically, broker-dealers) may purchase or redeem. Creation Units of the Fund generally consist of at least 25,000 Shares, though this may change from time to time. The Fund generally issues and redeems Creation Units in exchange for a portfolio of securities closely approximating the holdings of the Fund (the "Deposit Securities") and/or a designated amount of cash.

Tax Information

Fund distributions are generally taxable as ordinary income, qualified dividend income, or capital gains (or a combination), unless your investment is in an individual retirement account ("IRA") or other tax-advantaged account. Distributions on investments made through tax-deferred arrangements may be taxed later upon withdrawal of assets from those accounts.

Financial Intermediary Compensation

If you purchase Shares through a broker-dealer or other financial intermediary (such as a bank) (an "Intermediary"), the Adviser or its affiliates may pay Intermediaries for certain activities related to the Fund, including participation in activities that are designed to make Intermediaries more knowledgeable about exchange traded products, including the Fund, or for other activities, such as marketing, educational training or other initiatives related to the sale or promotion of Shares. These payments may create a conflict of interest by influencing the Intermediary and your salesperson to recommend the Fund over another investment. Any such arrangements do not result in increased Fund expenses. Ask your salesperson or visit the Intermediary's website for more information.

TRUESHARES STRUCTURED OUTCOME (AUGUST) ETF

Investment Objective

The Fund seeks to provide investors with returns (before fees and expenses) that track those of the S&P 500 Price Return Index (the “S&P 500 Price Index”) while seeking to provide a buffer against the first 8% to 12% of S&P 500 Price Index losses, over the period from August 1, 2020 to July 31, 2021.

Fees and Expenses of the Fund

This table describes the fees and expenses that you may pay if you buy, hold or sell shares of the Fund (“Shares”). This table and the Example below do not include the brokerage commissions that investors may pay on their purchases and sales of Shares.

Shareholder Fees <i>(fees paid directly from your investment)</i>	None
Annual Fund Operating Expenses <i>(expenses that you pay each year as a percentage of the value of your investment)</i>	
Management Fees	0.79%
Distribution and/or Service (12b-1) Fees	0.00%
Other Expenses *	0.00%
Total Annual Fund Operating Expenses	0.79%

* Estimated for the current fiscal year.

Example

This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. The Example assumes that you invest \$10,000 in the Fund for the time periods indicated and then redeem all of your Shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the Fund’s operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

1 Year: \$81

3 Years: \$252

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Shares are held in a taxable account. These costs, which are not reflected in the Annual Fund Operating Expenses or in the Example, affect the Fund’s performance. Because the Fund is newly organized, portfolio turnover information is not yet available.

Principal Investment Strategy

The Fund is an actively-managed exchange-traded fund (“ETF”) that seeks to achieve its investment objective by investing substantially all of its assets in options that reference the S&P 500 Price Index. The Fund’s investment adviser, TrueMark Investments, LLC (“TrueMark”), and sub-adviser, SpiderRock Advisors, LLC (“SpiderRock”), will employ a “buffer protect” options strategy that uses such options to seek to achieve exposure to the S&P 500 Price Index while mitigating the first 8% to 12% decline in the S&P 500 Price Index (the “Buffer”) over a 12-month period beginning on a specified day each August (each, a “Roll Date”). The period from one Roll Date to the next Roll Date is referred to as the “Investment Period,” and the first day of the Investment Period is referred to as the “Initial Investment Day”).

The Fund will purchase call options and sell (write) put options on the S&P 500 Price Index or an ETF that tracks the S&P 500 Price Index on each Initial Investment Day with an expiration on the next Roll Date. An option gives the purchaser of the option the right to purchase (for a call option) or sell (for a put option) the underlying asset (or deliver cash equal to the value of an underlying index) at a specified price (“strike price”). In the event the underlying asset declines in value, the value of a put option will generally increase (and the value of a call option will generally decrease and may end up worthless), and in the event the underlying asset appreciates in value, the value of a put option will generally decrease and may end up worthless (and the value of a call option will generally increase).

On each Initial Investment Day, the Fund will sell (write) put options on the S&P 500 Price Index or an ETF that tracks the S&P 500 Price Index with a strike price within a range of approximately 8% to 12% lower than the current value of the S&P 500 Price Index or an ETF that tracks the S&P 500 Price Index. As the seller of these options, the Fund receives a premium from the buyer of the options, which the Fund invests in at-the-money call options on the S&P 500 Price Index or an ETF that tracks the S&P 500 Price Index (*i.e.*, call options having a strike price roughly equal to the current value of the S&P 500 Price Index or an ETF that tracks the S&P 500 Price Index). The relative price of the put options sold (written) by the Fund to the price of the call options purchased by the Fund will determine

the Fund's exposure to the S&P 500 Price Index during the Investment Period. **Due to the cost of the options used by the Fund, the correlation of the Fund's performance to that of the S&P 500 Price Index is expected to be less than if the Fund invested directly in the S&P 500 Price Index without using options, and could be substantially less.** This means that if the S&P 500 Price Index experiences gains for an Investment Period, the Fund may not realize gains to the same extent.

The Fund's strategy is to seek to protect investors from a decline of up to 8% to 12% in the performance of the S&P 500 Price Index from one Roll Date to the next Roll Date. When the Adviser or Sub-Adviser sells puts on the S&P 500 Price Index to create the buffer range, the proceeds are used to purchase calls at the money. However, not all puts generate the same premium relative to the downside exposure of the Fund. The Adviser will seek to deliver a buffer of 10% from the reference price of the S&P 500 Price Index on the first trading day of the month. However, the market could fluctuate on or after the buffer is set and this range allows for market condition volatility. **The Fund is not designed to protect against declines of more than 8% to 12% in the level of the S&P 500 Price Index, and there can be no guarantee that the Fund will be successful in implementing the buffer protect options strategy to avoid the first 8% to 12% decline.** Additionally, even if the Fund mitigates a decline in the performance of the S&P 500 Price Index from one Roll Date to the next Roll Date, the Fund's returns during the Investment Period (prior to the next Roll Date) may not reflect the buffer protect options strategy.

The Fund will invest in standardized exchange-listed options or in exchange-traded FLEXible EXchange Options ("FLEX Options"), which are customized exchange-traded option contracts available through the Chicago Board Option Exchange ("Cboe") that are guaranteed for settlement by The Options Clearing Corporation ("OCC"). FLEX Options provide investors with the ability to customize exercise prices, exercise styles, and expiration dates, while achieving price discovery in competitive, transparent, auction markets and avoiding the counterparty exposure of over-the-counter ("OTC") options positions. All FLEX Options in the Fund are European-style options (*i.e.*, they can only be exercised at the expiration date of the option) based on the S&P 500 Price Index or an ETF that tracks the S&P 500 Price Index and have an expiration date that is the last day of the Investment Period. In general, the Fund intends to invest in FLEX options only, as these options provide the best combination of OCC guarantees, price discovery, customization, and European-style settlement that is ideal for the Fund. However in certain unforeseen circumstances, listed options may be used by the Fund to provide an additional source of desired market exposure. The Fund also expects to invest in U.S. Treasury bonds.

The Fund is designed to provide the following outcomes during each individual Investment Period:

Change in the Returns of the S&P 500 Price Index	Expected Change in the Returns of the Fund
Declines between -8% and -12% (or more)	Declines 8% to 12% percentage points less than the S&P 500 Price Index (<i>e.g.</i> , if the S&P 500 Price Index returns -35%, the Fund is designed to return -23% to -27%)
Declines between 0% and -8%	No change
Appreciates	The Fund's returns will appreciate to a similar extent as the S&P 500 Price Index, but will be less than those of the S&P 500 Price Index due to the cost of the options used by the Fund

The following charts illustrate the hypothetical returns that the Fund seeks to provide in certain illustrative scenarios for a shareholder that purchases Fund shares on the Initial Investment Day and holds such shares for the entire Investment Period. These charts do not take into account payment by the Fund of fees and expenses and assume a buffer of 10%. **There is no guarantee that the Fund will be successful in providing these investment outcomes for any Investment Period.**

The Fund includes a mix of purchased and written (sold) put and call options structured to achieve the results described above. The Fund is designed to seek to achieve the results described above for investments made on the Initial Investment Day and held until the last day of the Investment Period. **Investments made on any day other than the Initial Investment Day may differ significantly, positively or negatively, from the results described above.** The Fund's website, www.true-shares.com, contains information about the Fund's holdings, and the level of the S&P 500 Price Index as of the Initial Investment Day and the prior business day to assist an investor in understanding and the range of results such investor can expect for investments made at times other than on the Initial Investment Day.

Additionally, the Fund's website provides information relating to the returns of the Fund, including the Fund's Buffer and its position relative to the S&P 500 Price Index on a daily basis.

The Fund's operations are intended to be continuous. It will not terminate and distribute its assets at the conclusion of each Investment Period. On each Roll Date, another Investment Period will commence and the Fund will invest in a new set of options.

The Fund is classified as "non-diversified" under the Investment Company Act of 1940, as amended (the "1940 Act").

Principal Investment Risks

The principal risks of investing in the Fund are summarized below. The principal risks are presented in alphabetical order to facilitate finding particular risks and comparing them with those of other funds. Each risk summarized below is considered a "principal risk" of investing in the Fund, regardless of the order in which it appears. As with any investment, there is a risk that you could lose all or a portion of your investment in the Fund. Some or all of these risks may adversely affect the Fund's net asset value per share ("NAV"), trading price, yield, total return and/or ability to meet its objectives.

- **Buffered Strategy Investment Risk.**

- *Buffered Loss Risk.* There can be no guarantee that the Fund will be successful in its strategy to provide buffer protection against S&P 500 Price Index losses if the S&P 500 Price Index decreases over the Investment Period by 8% or less. A shareholder may lose their entire investment. The Fund's strategy seeks to deliver returns that match the S&P 500 Price Index (but will be less than the S&P 500 Price Index due to the cost of the options used by the Fund), while limiting downside losses, if Shares are bought on the day on which the Fund enters into the options and held until those options expire at the end of each Investment Period. In the event an investor purchases Shares after the date on which the options were entered into or sells Shares prior to the expiration of the options, the buffer that the Fund seeks to provide may not be available. The Fund does not provide principal protection and an investor may experience significant losses on its investment, including the loss of its entire investment.
- *FLEX Options Risk.* The Fund may invest in FLEX Options issued and guaranteed for settlement by the OCC. The Fund bears the risk that the OCC will be unable or unwilling to perform its obligations under the FLEX Options contracts. Additionally, FLEX Options may be illiquid, and in such cases, the Fund may have difficulty closing out certain FLEX Options positions at desired times and prices.
- *Options Risk.* The Fund invests in options that derive their performance from the performance of the S&P 500 Price Index. Writing and buying options are speculative activities and entail investment exposures that are greater than their cost would suggest, meaning that a small investment in an option could have a substantial impact on the performance of the Fund. The Fund's use of call and put options can lead to losses because of adverse movements in the price or value of the underlying stock, index, or other asset, which may be magnified by certain features of the options. These risks are heightened when the Fund's portfolio managers use options to enhance the Fund's return or as a substitute for a position or security. When selling a call or put option, the Fund will receive a premium; however, this premium may not be enough to offset a loss incurred by the Fund if the price of the underlying asset is above or below, respectively, the strike price by an amount equal to or greater than the premium. The value of an option may be adversely affected if the market for the option becomes less liquid or smaller, and will be affected by changes in the value or yield of the option's underlying asset, an increase in interest rates, a change in the actual or perceived volatility of the stock market or the underlying asset and the remaining time to expiration. Additionally, the value of an option does not increase or decrease at the same rate as the underlying asset(s). The Fund's use of options, due to the cost of the options, will reduce the Fund's ability to get returns equal to the S&P 500 Price Index. This means that if the S&P 500 Price Index experiences gains for an Investment Period, the Fund will not benefit to the same extent from those gains. In addition, if the price of the underlying asset of an option is above the strike price of a written call option or below the strike price for a written put option, the value of the option, and consequently of the Fund, may decline significantly more than if the Fund invested directly in the underlying asset instead of using options. The Fund invests in options that derive their performance from the performance of the S&P 500 Price Index and can be volatile and involve various types and degrees of risks. The Fund could experience a loss if its options do not perform as anticipated, or are not correlated with the performance of their underlying stock or if the Fund is unable to purchase or liquidate a position because of an illiquid secondary market.
- *Purchase and Sale Timing Risk.* The Fund is designed to protect against the first 8% to 12% decline in the value of the S&P 500 Price Index and provide for participation in any gains, although not to the same extent, as the value of the S&P 500 Price Index, for a 12-month period from one Roll Date to the next Roll Date. Because the options purchased and written by the Fund will expire on the next Roll Date, if you purchase or sell Shares on a date other than a Roll Date or if you hold Shares for more or less than the time from the most recent Roll Date to the next Roll Date, the value of your investment in Shares may not be protected against the first 8% to 12% decline in the value of the S&P 500 Price Index and may not participate in a gain in the value of the S&P 500 Price Index for your investment period. The value of the options purchased and written by the Fund is dependent on, among other factors, the value, implied volatility, and implied dividend rate of the S&P 500 Price Index and interest rates, any or all of which may vary, sometimes significantly, during the period from the most recent Roll Date to the next Roll Date. Consequently, the value of the Fund may not directly track changes in the value of the S&P 500 Price Index in between Roll Dates.

- **Equity Market Risk.** The Fund invests in options that derive their performance from the S&P 500 Price Index, which is made up of common stocks. Common stocks are susceptible to general stock market fluctuations and to volatile increases and decreases in value as market confidence in and perceptions of their issuers change. These investor perceptions are based on various and unpredictable factors including: expectations regarding government, economic, monetary and fiscal policies; inflation and interest rates; economic expansion or contraction; and global or regional political, economic and banking crises.
- **ETF Risks.** The Fund is an ETF and, as a result of this structure, it is exposed to the following risks:
 - *Authorized Participants (“APs”), Market Makers, and Liquidity Providers Concentration Risk.* The Fund has a limited number of financial institutions that may act as APs. In addition, there may be a limited number of market makers and/or liquidity providers in the marketplace. To the extent either of the following events occur, Shares may trade at a material discount to NAV and possibly face delisting: (i) APs exit the business or otherwise become unable to process creation and/or redemption orders and no other APs step forward to perform these services, or (ii) market makers and/or liquidity providers exit the business or significantly reduce their business activities and no other entities step forward to perform their functions.
 - *Costs of Buying or Selling Shares.* Due to the costs of buying or selling Shares, including brokerage commissions imposed by brokers and bid/ask spreads, frequent trading of Shares may significantly reduce investment results and an investment in Shares may not be advisable for investors who anticipate regularly making small investments.
 - *Shares May Trade at Prices Other Than NAV.* As with all ETFs, Shares may be bought and sold in the secondary market at market prices. Although it is expected that the market price of Shares will approximate the Fund’s NAV, there may be times when the market price of Shares is more than the NAV intra-day (premium) or less than the NAV intra-day (discount) due to supply and demand of Shares or during periods of market volatility. This risk is heightened in times of market volatility, periods of steep market declines, and periods when there is limited trading activity for Shares in the secondary market, in which case such premiums or discounts may be significant.
 - *Trading.* Although Shares are listed for trading on the Cboe BZX Exchange, Inc. (the “Exchange”) and may be traded on U.S. exchanges other than the Exchange, there can be no assurance that Shares will trade with any volume, or at all, on any stock exchange. In stressed market conditions, the liquidity of Shares may begin to mirror the liquidity of the Fund’s underlying portfolio holdings, which can be significantly less liquid than Shares.
- **Management Risk.** The Fund is actively-managed and may not meet its investment objective based on the investment adviser’s and sub-adviser’s success or failure to implement investment strategies for the Fund.
- **New Fund Risk.** The Fund is a recently organized, non-diversified management investment company with no operating history. As a result, prospective investors have no track record or history on which to base their investment decision.
- **Non-Diversification Risk.** Although the Fund may invest in a variety of securities and instruments, the Fund will be considered to be non-diversified, which means that it may invest more of its assets in the securities of a single issuer or a smaller number of issuers than if it were a diversified fund. As a result, the Fund may be more exposed to the risks associated with and developments affecting an individual issuer or a smaller number of issuers than a fund that invests more widely. This may increase the Fund’s volatility and cause the performance of a relatively smaller number of issuers to have a greater impact on the Fund’s performance. However, the Fund intends to satisfy the asset diversification requirements for qualifying as a regulated investment company (“RIC”) under Subchapter M of the Internal Revenue Code of 1986, as amended (the “Code”).
- **Portfolio Turnover Risk.** Because the Fund may “turn over” some or all of its options as frequently as monthly, the Fund may incur high levels of transaction costs from commissions or mark-ups in the bid/offer spread. Higher portfolio turnover may result in the Fund paying higher levels of transaction costs and generating greater tax liabilities for shareholders. Portfolio turnover risk may cause the Fund’s performance to be less than you expect. While the turnover of the call options is not deemed “portfolio turnover” for accounting purposes, the economic impact to the Fund is similar to what could occur if the Fund experienced high portfolio turnover (e.g., in excess of 100% per year).
- **Tax Efficiency Risk.** A significant portion of income received from the Fund may be subject to tax at effective tax rates that are higher than the rates that would apply if the Fund were to engage in a different investment strategy. Additionally, the Fund’s investment strategy may require it to effect redemptions, in whole or in part, for cash. As a result, the Fund may be required to sell portfolio securities to obtain the cash needed to distribute redemption proceeds. This may cause the Fund to recognize investment income and/or capital gains or losses that it might not have recognized if it had completely satisfied the redemption in-kind. As a result, the Fund may be less tax efficient if it includes such a cash payment than if the in-kind redemption process was used exclusively. In addition, cash redemptions may incur higher brokerage costs than in-kind redemptions and these added costs may be borne by the Fund and negatively impact Fund performance. You should consult your tax advisor as to the tax consequences of purchasing, owning, and selling Shares.
- **U.S. Treasury Obligations Risk.** U.S. Treasury obligations may differ from other fixed income securities in their interest rates, maturities, times of issuance and other characteristics. Similar to other issuers, changes to the financial condition or credit rating of the U.S. government may cause the value of the Fund’s U.S. Treasury obligations to decline.

Performance

The Fund is new and therefore does not have a performance history for a full calendar year. In the future, performance information for the Fund will be presented in this section. Updated performance information is available on the Fund's website at www.true-shares.com or by calling the Fund toll free at 1-800-617-0004.

Management

Investment Adviser

TrueMark Investments, LLC serves as investment adviser to the Fund.

Sub-Adviser

SpiderRock Advisors, LLC serves as investment sub-adviser to the Fund

Portfolio Managers

Jordan C. Waldrep, CFA, Chief Investment Officer for the Adviser, Eric Metz, Chief Investment Officer for the Sub-Adviser and Fred Sloneker, Portfolio Manager for the Sub-Adviser, have been portfolio managers of the Fund since its inception in 2020.

Purchase and Sale of Shares

Shares are listed on the Exchange, and most investors will buy and sell Shares through brokers at market prices, rather than NAV. Because Shares trade at market prices rather than NAV, Shares may trade at a price greater than NAV (premium) or less than NAV (discount). The Fund issues and redeems Shares at NAV only in large blocks known as "Creation Units," which only APs (typically, broker-dealers) may purchase or redeem. Creation Units of the Fund generally consist of at least 25,000 Shares, though this may change from time to time. The Fund generally issues and redeems Creation Units in exchange for a portfolio of securities closely approximating the holdings of the Fund (the "Deposit Securities") and/or a designated amount of cash.

Tax Information

Fund distributions are generally taxable as ordinary income, qualified dividend income, or capital gains (or a combination), unless your investment is in an individual retirement account ("IRA") or other tax-advantaged account. Distributions on investments made through tax-deferred arrangements may be taxed later upon withdrawal of assets from those accounts.

Financial Intermediary Compensation

If you purchase Shares through a broker-dealer or other financial intermediary (such as a bank) (an "Intermediary"), the Adviser or its affiliates may pay Intermediaries for certain activities related to the Fund, including participation in activities that are designed to make Intermediaries more knowledgeable about exchange traded products, including the Fund, or for other activities, such as marketing, educational training or other initiatives related to the sale or promotion of Shares. These payments may create a conflict of interest by influencing the Intermediary and your salesperson to recommend the Fund over another investment. Any such arrangements do not result in increased Fund expenses. Ask your salesperson or visit the Intermediary's website for more information.

TRUESHARES STRUCTURED OUTCOME (SEPTEMBER) ETF

Investment Objective

The Fund seeks to provide investors with returns (before fees and expenses) that track those of the S&P 500 Price Return Index (the “S&P 500 Price Index”) while seeking to provide a buffer against the first 8% to 12% of S&P 500 Price Index losses, over the period from September 1, 2020 to August 31, 2021.

Fees and Expenses of the Fund

This table describes the fees and expenses that you may pay if you buy, hold or sell shares of the Fund (“Shares”). This table and the Example below do not include the brokerage commissions that investors may pay on their purchases and sales of Shares.

Shareholder Fees <i>(fees paid directly from your investment)</i>	None
Annual Fund Operating Expenses <i>(expenses that you pay each year as a percentage of the value of your investment)</i>	
Management Fees	0.79%
Distribution and/or Service (12b-1) Fees	0.00%
Other Expenses*	0.00%
Total Annual Fund Operating Expenses	0.79%

* Estimated for the current fiscal year.

Example

This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. The Example assumes that you invest \$10,000 in the Fund for the time periods indicated and then redeem all of your Shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the Fund’s operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

1 Year: \$81

3 Years: \$252

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Shares are held in a taxable account. These costs, which are not reflected in the Annual Fund Operating Expenses or in the Example, affect the Fund’s performance. Because the Fund is newly organized, portfolio turnover information is not yet available.

Principal Investment Strategy

The Fund is an actively-managed exchange-traded fund (“ETF”) that seeks to achieve its investment objective by investing substantially all of its assets in options that reference the S&P 500 Price Index. The Fund’s investment adviser, TrueMark Investments, LLC (“TrueMark”), and sub-adviser, SpiderRock Advisors, LLC (“SpiderRock”), will employ a “buffer protect” options strategy that uses such options to seek to achieve exposure to the S&P 500 Price Index while mitigating the first 8% to 12% decline in the S&P 500 Price Index (the “Buffer”) over a 12-month period beginning on a specified day each September (each, a “Roll Date”). The period from one Roll Date to the next Roll Date is referred to as the “Investment Period,” and the first day of the Investment Period is referred to as the “Initial Investment Day”).

The Fund will purchase call options and sell (write) put options on the S&P 500 Price Index or an ETF that tracks the S&P 500 Price Index on each Initial Investment Day with an expiration on the next Roll Date. An option gives the purchaser of the option the right to purchase (for a call option) or sell (for a put option) the underlying asset (or deliver cash equal to the value of an underlying index) at a specified price (“strike price”). In the event the underlying asset declines in value, the value of a put option will generally increase (and the value of a call option will generally decrease and may end up worthless), and in the event the underlying asset appreciates in value, the value of a put option will generally decrease and may end up worthless (and the value of a call option will generally increase).

On each Initial Investment Day, the Fund will sell (write) put options on the S&P 500 Price Index or an ETF that tracks the S&P 500 Price Index with a strike price within a range of approximately 8% to 12% lower than the current value of the S&P 500 Price Index or an ETF that tracks the S&P 500 Price Index. As the seller of these options, the Fund receives a premium from the buyer of the options, which the Fund invests in at-the-money call options on the S&P 500 Price Index or an ETF that tracks the S&P 500 Price Index (*i.e.*, call options having a strike price roughly equal to the current value of the S&P 500 Price Index or an ETF that tracks the S&P 500 Price Index). The relative price of the put options sold (written) by the Fund to the price of the call options purchased by the Fund will determine

the Fund's exposure to the S&P 500 Price Index during the Investment Period. **Due to the cost of the options used by the Fund, the correlation of the Fund's performance to that of the S&P 500 Price Index is expected to be less than if the Fund invested directly in the S&P 500 Price Index without using options, and could be substantially less.** This means that if the S&P 500 Price Index experiences gains for an Investment Period, the Fund may not realize gains to the same extent.

The Fund's strategy is to seek to protect investors from a decline of up to 8% to 12% in the performance of the S&P 500 Price Index from one Roll Date to the next Roll Date. When the Adviser or Sub-Adviser sells puts on the S&P 500 Price Index to create the buffer range, the proceeds are used to purchase calls at the money. However, not all puts generate the same premium relative to the downside exposure of the Fund. The Adviser will seek to deliver a buffer of 10% from the reference price of the S&P 500 Price Index on the first trading day of the month. However, the market could fluctuate on or after the buffer is set and this range allows for market condition volatility. **The Fund is not designed to protect against declines of more than 8% to 12% in the level of the S&P 500 Price Index, and there can be no guarantee that the Fund will be successful in implementing the buffer protect options strategy to avoid the first 8% to 12% decline.** Additionally, even if the Fund mitigates a decline in the performance of the S&P 500 Price Index from one Roll Date to the next Roll Date, the Fund's returns during the Investment Period (prior to the next Roll Date) may not reflect the buffer protect options strategy.

The Fund will invest in standardized exchange-listed options or in exchange-traded FLEXible EXchange Options ("FLEX Options"), which are customized exchange-traded option contracts available through the Chicago Board Option Exchange ("Cboe") that are guaranteed for settlement by The Options Clearing Corporation ("OCC"). FLEX Options provide investors with the ability to customize exercise prices, exercise styles, and expiration dates, while achieving price discovery in competitive, transparent, auction markets and avoiding the counterparty exposure of over-the-counter ("OTC") options positions. All FLEX Options in the Fund are European-style options (*i.e.*, they can only be exercised at the expiration date of the option) based on the S&P 500 Price Index or an ETF that tracks the S&P 500 Price Index and have an expiration date that is the last day of the Investment Period. In general, the Fund intends to invest in FLEX options only, as these options provide the best combination of OCC guarantees, price discovery, customization, and European-style settlement that is ideal for the Fund. However in certain unforeseen circumstances, listed options may be used by the Fund to provide an additional source of desired market exposure. The Fund also expects to invest in U.S. Treasury bonds.

The Fund is designed to provide the following outcomes during each individual Investment Period:

Change in the Returns of the S&P 500 Price Index	Expected Change in the Returns of the Fund
Declines between -8% and -12% (or more)	Declines 8% to 12% percentage points less than the S&P 500 Price Index (<i>e.g.</i> , if the S&P 500 Price Index returns -35%, the Fund is designed to return -23% to -27%)
Declines between 0% and -8%	No change
Appreciates	The Fund's returns will appreciate to a similar extent as the S&P 500 Price Index, but will be less than those of the S&P 500 Price Index due to the cost of the options used by the Fund

The following charts illustrate the hypothetical returns that the Fund seeks to provide in certain illustrative scenarios for a shareholder that purchases Fund shares on the Initial Investment Day and holds such shares for the entire Investment Period. These charts do not take into account payment by the Fund of fees and expenses and assume a buffer of 10%. **There is no guarantee that the Fund will be successful in providing these investment outcomes for any Investment Period.**

The Fund includes a mix of purchased and written (sold) put and call options structured to achieve the results described above. The Fund is designed to seek to achieve the results described above for investments made on the Initial Investment Day and held until the last day of the Investment Period. **Investments made on any day other than the Initial Investment Day may differ significantly, positively or negatively, from the results described above.** The Fund's website, www.true-shares.com, contains information about the Fund's holdings, and the level of the S&P 500 Price Index as of the Initial Investment Day and the prior business day to assist an investor in understanding and the range of results such investor can expect for investments made at times other than on the Initial Investment Day.

Additionally, the Fund's website provides information relating to the returns of the Fund, including the Fund's Buffer and its position relative to the S&P 500 Price Index on a daily basis.

The Fund's operations are intended to be continuous. It will not terminate and distribute its assets at the conclusion of each Investment Period. On each Roll Date, another Investment Period will commence and the Fund will invest in a new set of options.

The Fund is classified as "non-diversified" under the Investment Company Act of 1940, as amended (the "1940 Act").

Principal Investment Risks

The principal risks of investing in the Fund are summarized below. The principal risks are presented in alphabetical order to facilitate finding particular risks and comparing them with those of other funds. Each risk summarized below is considered a "principal risk" of investing in the Fund, regardless of the order in which it appears. As with any investment, there is a risk that you could lose all or a portion of your investment in the Fund. Some or all of these risks may adversely affect the Fund's net asset value per share ("NAV"), trading price, yield, total return and/or ability to meet its objectives.

- **Buffered Strategy Investment Risk.**

- *Buffered Loss Risk.* There can be no guarantee that the Fund will be successful in its strategy to provide buffer protection against S&P 500 Price Index losses if the S&P 500 Price Index decreases over the Investment Period by 8% or less. A shareholder may lose their entire investment. The Fund's strategy seeks to deliver returns that match the S&P 500 Price Index (but will be less than the S&P 500 Price Index due to the cost of the options used by the Fund), while limiting downside losses, if Shares are bought on the day on which the Fund enters into the options and held until those options expire at the end of each Investment Period. In the event an investor purchases Shares after the date on which the options were entered into or sells Shares prior to the expiration of the options, the buffer that the Fund seeks to provide may not be available. The Fund does not provide principal protection and an investor may experience significant losses on its investment, including the loss of its entire investment.
- *FLEX Options Risk.* The Fund may invest in FLEX Options issued and guaranteed for settlement by the OCC. The Fund bears the risk that the OCC will be unable or unwilling to perform its obligations under the FLEX Options contracts. Additionally, FLEX Options may be illiquid, and in such cases, the Fund may have difficulty closing out certain FLEX Options positions at desired times and prices.
- *Options Risk.* The Fund invests in options that derive their performance from the performance of the S&P 500 Price Index. Writing and buying options are speculative activities and entail investment exposures that are greater than their cost would suggest, meaning that a small investment in an option could have a substantial impact on the performance of the Fund. The Fund's use of call and put options can lead to losses because of adverse movements in the price or value of the underlying stock, index, or other asset, which may be magnified by certain features of the options. These risks are heightened when the Fund's portfolio managers use options to enhance the Fund's return or as a substitute for a position or security. When selling a call or put option, the Fund will receive a premium; however, this premium may not be enough to offset a loss incurred by the Fund if the price of the underlying asset is above or below, respectively, the strike price by an amount equal to or greater than the premium. The value of an option may be adversely affected if the market for the option becomes less liquid or smaller, and will be affected by changes in the value or yield of the option's underlying asset, an increase in interest rates, a change in the actual or perceived volatility of the stock market or the underlying asset and the remaining time to expiration. Additionally, the value of an option does not increase or decrease at the same rate as the underlying asset(s). The Fund's use of options, due to the cost of the options, will reduce the Fund's ability to get returns equal to the S&P 500 Price Index. This means that if the S&P 500 Price Index experiences gains for an Investment Period, the Fund will not benefit to the same extent from those gains. In addition, if the price of the underlying asset of an option is above the strike price of a written call option or below the strike price for a written put option, the value of the option, and consequently of the Fund, may decline significantly more than if the Fund invested directly in the underlying asset instead of using options. The Fund invests in options that derive their performance from the performance of the S&P 500 Price Index and can be volatile and involve various types and degrees of risks. The Fund could experience a loss if its options do not perform as anticipated, or are not correlated with the performance of their underlying stock or if the Fund is unable to purchase or liquidate a position because of an illiquid secondary market.
- *Purchase and Sale Timing Risk.* The Fund is designed to protect against the first 8% to 12% decline in the value of the S&P 500 Price Index and provide for participation in any gains, although not to the same extent, as the value of the S&P 500 Price Index, for a 12-month period from one Roll Date to the next Roll Date. Because the options purchased and written by the Fund will expire on the next Roll Date, if you purchase or sell Shares on a date other than a Roll Date or if you hold Shares for more or less than the time from the most recent Roll Date to the next Roll Date, the value of your investment in Shares may not be protected against the first 8% to 12% decline in the value of the S&P 500 Price Index and may not participate in a gain in the value of the S&P 500 Price Index for your investment period. The value of the options purchased and written by the Fund is dependent on, among other factors, the value, implied volatility, and implied dividend rate of the S&P 500 Price Index and interest rates, any or all of which may vary, sometimes significantly, during the period from the most recent Roll Date to the next Roll Date. Consequently, the value of the Fund may not directly track changes in the value of the S&P 500 Price Index in between Roll Dates.

- **Equity Market Risk.** The Fund invests in options that derive their performance from the S&P 500 Price Index, which is made up of common stocks. Common stocks are susceptible to general stock market fluctuations and to volatile increases and decreases in value as market confidence in and perceptions of their issuers change. These investor perceptions are based on various and unpredictable factors including: expectations regarding government, economic, monetary and fiscal policies; inflation and interest rates; economic expansion or contraction; and global or regional political, economic and banking crises.
- **ETF Risks.** The Fund is an ETF and, as a result of this structure, it is exposed to the following risks:
 - *Authorized Participants (“APs”), Market Makers, and Liquidity Providers Concentration Risk.* The Fund has a limited number of financial institutions that may act as APs. In addition, there may be a limited number of market makers and/or liquidity providers in the marketplace. To the extent either of the following events occur, Shares may trade at a material discount to NAV and possibly face delisting: (i) APs exit the business or otherwise become unable to process creation and/or redemption orders and no other APs step forward to perform these services, or (ii) market makers and/or liquidity providers exit the business or significantly reduce their business activities and no other entities step forward to perform their functions.
 - *Costs of Buying or Selling Shares.* Due to the costs of buying or selling Shares, including brokerage commissions imposed by brokers and bid/ask spreads, frequent trading of Shares may significantly reduce investment results and an investment in Shares may not be advisable for investors who anticipate regularly making small investments.
 - *Shares May Trade at Prices Other Than NAV.* As with all ETFs, Shares may be bought and sold in the secondary market at market prices. Although it is expected that the market price of Shares will approximate the Fund’s NAV, there may be times when the market price of Shares is more than the NAV intra-day (premium) or less than the NAV intra-day (discount) due to supply and demand of Shares or during periods of market volatility. This risk is heightened in times of market volatility, periods of steep market declines, and periods when there is limited trading activity for Shares in the secondary market, in which case such premiums or discounts may be significant.
 - *Trading.* Although Shares are listed for trading on the Cboe BZX Exchange, Inc. (the “Exchange”) and may be traded on U.S. exchanges other than the Exchange, there can be no assurance that Shares will trade with any volume, or at all, on any stock exchange. In stressed market conditions, the liquidity of Shares may begin to mirror the liquidity of the Fund’s underlying portfolio holdings, which can be significantly less liquid than Shares.
- **Management Risk.** The Fund is actively-managed and may not meet its investment objective based on the investment adviser’s and sub-adviser’s success or failure to implement investment strategies for the Fund.
- **New Fund Risk.** The Fund is a recently organized, non-diversified management investment company with no operating history. As a result, prospective investors have no track record or history on which to base their investment decision.
- **Non-Diversification Risk.** Although the Fund may invest in a variety of securities and instruments, the Fund will be considered to be non-diversified, which means that it may invest more of its assets in the securities of a single issuer or a smaller number of issuers than if it were a diversified fund. As a result, the Fund may be more exposed to the risks associated with and developments affecting an individual issuer or a smaller number of issuers than a fund that invests more widely. This may increase the Fund’s volatility and cause the performance of a relatively smaller number of issuers to have a greater impact on the Fund’s performance. However, the Fund intends to satisfy the asset diversification requirements for qualifying as a regulated investment company (“RIC”) under Subchapter M of the Internal Revenue Code of 1986, as amended (the “Code”).
- **Portfolio Turnover Risk.** Because the Fund may “turn over” some or all of its options as frequently as monthly, the Fund may incur high levels of transaction costs from commissions or mark-ups in the bid/offer spread. Higher portfolio turnover may result in the Fund paying higher levels of transaction costs and generating greater tax liabilities for shareholders. Portfolio turnover risk may cause the Fund’s performance to be less than you expect. While the turnover of the call options is not deemed “portfolio turnover” for accounting purposes, the economic impact to the Fund is similar to what could occur if the Fund experienced high portfolio turnover (e.g., in excess of 100% per year).
- **Tax Efficiency Risk.** A significant portion of income received from the Fund may be subject to tax at effective tax rates that are higher than the rates that would apply if the Fund were to engage in a different investment strategy. Additionally, the Fund’s investment strategy may require it to effect redemptions, in whole or in part, for cash. As a result, the Fund may be required to sell portfolio securities to obtain the cash needed to distribute redemption proceeds. This may cause the Fund to recognize investment income and/or capital gains or losses that it might not have recognized if it had completely satisfied the redemption in-kind. As a result, the Fund may be less tax efficient if it includes such a cash payment than if the in-kind redemption process was used exclusively. In addition, cash redemptions may incur higher brokerage costs than in-kind redemptions and these added costs may be borne by the Fund and negatively impact Fund performance. You should consult your tax advisor as to the tax consequences of purchasing, owning, and selling Shares.
- **U.S. Treasury Obligations Risk.** U.S. Treasury obligations may differ from other fixed income securities in their interest rates, maturities, times of issuance and other characteristics. Similar to other issuers, changes to the financial condition or credit rating of the U.S. government may cause the value of the Fund’s U.S. Treasury obligations to decline.

Performance

The Fund is new and therefore does not have a performance history for a full calendar year. In the future, performance information for the Fund will be presented in this section. Updated performance information is available on the Fund's website at www.true-shares.com or by calling the Fund toll free at 1-800-617-0004.

Management

Investment Adviser

TrueMark Investments, LLC serves as investment adviser to the Fund.

Sub-Adviser

SpiderRock Advisors, LLC serves as investment sub-adviser to the Fund

Portfolio Managers

Jordan C. Waldrep, CFA, Chief Investment Officer for the Adviser, Eric Metz, Chief Investment Officer for the Sub-Adviser and Fred Sloneker, Portfolio Manager for the Sub-Adviser, have been portfolio managers of the Fund since its inception in 2020.

Purchase and Sale of Shares

Shares are listed on the Exchange, and most investors will buy and sell Shares through brokers at market prices, rather than NAV. Because Shares trade at market prices rather than NAV, Shares may trade at a price greater than NAV (premium) or less than NAV (discount). The Fund issues and redeems Shares at NAV only in large blocks known as "Creation Units," which only APs (typically, broker-dealers) may purchase or redeem. Creation Units of the Fund generally consist of at least 25,000 Shares, though this may change from time to time. The Fund generally issues and redeems Creation Units in exchange for a portfolio of securities closely approximating the holdings of the Fund (the "Deposit Securities") and/or a designated amount of cash.

Tax Information

Fund distributions are generally taxable as ordinary income, qualified dividend income, or capital gains (or a combination), unless your investment is in an individual retirement account ("IRA") or other tax-advantaged account. Distributions on investments made through tax-deferred arrangements may be taxed later upon withdrawal of assets from those accounts.

Financial Intermediary Compensation

If you purchase Shares through a broker-dealer or other financial intermediary (such as a bank) (an "Intermediary"), the Adviser or its affiliates may pay Intermediaries for certain activities related to the Fund, including participation in activities that are designed to make Intermediaries more knowledgeable about exchange traded products, including the Fund, or for other activities, such as marketing, educational training or other initiatives related to the sale or promotion of Shares. These payments may create a conflict of interest by influencing the Intermediary and your salesperson to recommend the Fund over another investment. Any such arrangements do not result in increased Fund expenses. Ask your salesperson or visit the Intermediary's website for more information.

TRUESHARES STRUCTURED OUTCOME (OCTOBER) ETF

Investment Objective

The Fund seeks to provide investors with returns (before fees and expenses) that track those of the S&P 500 Price Return Index (the “S&P 500 Price Index”) while seeking to provide a buffer against the first 8% to 12% of S&P 500 Price Index losses, over the period from October 1, 2020 to September 30, 2021.

Fees and Expenses of the Fund

This table describes the fees and expenses that you may pay if you buy, hold or sell shares of the Fund (“Shares”). This table and the Example below do not include the brokerage commissions that investors may pay on their purchases and sales of Shares.

Shareholder Fees <i>(fees paid directly from your investment)</i>	None
Annual Fund Operating Expenses <i>(expenses that you pay each year as a percentage of the value of your investment)</i>	
Management Fees	0.79%
Distribution and/or Service (12b-1) Fees	0.00%
Other Expenses *	0.00%
Total Annual Fund Operating Expenses	0.79%

* Estimated for the current fiscal year.

Example

This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. The Example assumes that you invest \$10,000 in the Fund for the time periods indicated and then redeem all of your Shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the Fund’s operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

1 Year: \$81

3 Years: \$252

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Shares are held in a taxable account. These costs, which are not reflected in the Annual Fund Operating Expenses or in the Example, affect the Fund’s performance. Because the Fund is newly organized, portfolio turnover information is not yet available.

Principal Investment Strategy

The Fund is an actively-managed exchange-traded fund (“ETF”) that seeks to achieve its investment objective by investing substantially all of its assets in options that reference the S&P 500 Price Index. The Fund’s investment adviser, TrueMark Investments, LLC (“TrueMark”), and sub-adviser, SpiderRock Advisors, LLC (“SpiderRock”), will employ a “buffer protect” options strategy that uses such options to seek to achieve exposure to the S&P 500 Price Index while mitigating the first 8% to 12% decline in the S&P 500 Price Index (the “Buffer”) over a 12-month period beginning on a specified day each October (each, a “Roll Date”). The period from one Roll Date to the next Roll Date is referred to as the “Investment Period,” and the first day of the Investment Period is referred to as the “Initial Investment Day”).

The Fund will purchase call options and sell (write) put options on the S&P 500 Price Index or an ETF that tracks the S&P 500 Price Index on each Initial Investment Day with an expiration on the next Roll Date. An option gives the purchaser of the option the right to purchase (for a call option) or sell (for a put option) the underlying asset (or deliver cash equal to the value of an underlying index) at a specified price (“strike price”). In the event the underlying asset declines in value, the value of a put option will generally increase (and the value of a call option will generally decrease and may end up worthless), and in the event the underlying asset appreciates in value, the value of a put option will generally decrease and may end up worthless (and the value of a call option will generally increase).

On each Initial Investment Day, the Fund will sell (write) put options on the S&P 500 Price Index or an ETF that tracks the S&P 500 Price Index with a strike price within a range of approximately 8% to 12% lower than the current value of the S&P 500 Price Index or an ETF that tracks the S&P 500 Price Index. As the seller of these options, the Fund receives a premium from the buyer of the options, which the Fund invests in at-the-money call options on the S&P 500 Price Index or an ETF that tracks the S&P 500 Price Index (*i.e.*, call options having a strike price roughly equal to the current value of the S&P 500 Price Index or an ETF that tracks the S&P 500 Price Index). The relative price of the put options sold (written) by the Fund to the price of the call options purchased by the Fund will determine

the Fund’s exposure to the S&P 500 Price Index during the Investment Period. **Due to the cost of the options used by the Fund, the correlation of the Fund’s performance to that of the S&P 500 Price Index is expected to be less than if the Fund invested directly in the S&P 500 Price Index without using options, and could be substantially less.** This means that if the S&P 500 Price Index experiences gains for an Investment Period, the Fund may not realize gains to the same extent.

The Fund’s strategy is to seek to protect investors from a decline of up to 8% to 12% in the performance of the S&P 500 Price Index from one Roll Date to the next Roll Date. When the Adviser or Sub-Adviser sells puts on the S&P 500 Price Index to create the buffer range, the proceeds are used to purchase calls at the money. However, not all puts generate the same premium relative to the downside exposure of the Fund. The Adviser will seek to deliver a buffer of 10% from the reference price of the S&P 500 Price Index on the first trading day of the month. However, the market could fluctuate on or after the buffer is set and this range allows for market condition volatility. **The Fund is not designed to protect against declines of more than 8% to 12% in the level of the S&P 500 Price Index, and there can be no guarantee that the Fund will be successful in implementing the buffer protect options strategy to avoid the first 8% to 12% decline.** Additionally, even if the Fund mitigates a decline in the performance of the S&P 500 Price Index from one Roll Date to the next Roll Date, the Fund’s returns during the Investment Period (prior to the next Roll Date) may not reflect the buffer protect options strategy.

The Fund will invest in standardized exchange-listed options or in exchange-traded FLEXible EXchange Options (“FLEX Options”), which are customized exchange-traded option contracts available through the Chicago Board Option Exchange (“Cboe”) that are guaranteed for settlement by The Options Clearing Corporation (“OCC”). FLEX Options provide investors with the ability to customize exercise prices, exercise styles, and expiration dates, while achieving price discovery in competitive, transparent, auction markets and avoiding the counterparty exposure of over-the-counter (“OTC”) options positions. All FLEX Options in the Fund are European-style options (*i.e.*, they can only be exercised at the expiration date of the option) based on the S&P 500 Price Index or an ETF that tracks the S&P 500 Price Index and have an expiration date that is the last day of the Investment Period. In general, the Fund intends to invest in FLEX options only, as these options provide the best combination of OCC guarantees, price discovery, customization, and European-style settlement that is ideal for the Fund. However in certain unforeseen circumstances, listed options may be used by the Fund to provide an additional source of desired market exposure. The Fund also expects to invest in U.S. Treasury bonds.

The Fund is designed to provide the following outcomes during each individual Investment Period:

Change in the Returns of the S&P 500 Price Index	Expected Change in the Returns of the Fund
Declines between -8% and -12% (or more)	Declines 8% to 12% percentage points less than the S&P 500 Price Index (<i>e.g.</i> , if the S&P 500 Price Index returns -35%, the Fund is designed to return -23% to -27%)
Declines between 0% and -8%	No change
Appreciates	The Fund’s returns will appreciate to a similar extent as the S&P 500 Price Index, but will be less than those of the S&P 500 Price Index due to the cost of the options used by the Fund

The following charts illustrate the hypothetical returns that the Fund seeks to provide in certain illustrative scenarios for a shareholder that purchases Fund shares on the Initial Investment Day and holds such shares for the entire Investment Period. These charts do not take into account payment by the Fund of fees and expenses and assume a buffer of 10%. **There is no guarantee that the Fund will be successful in providing these investment outcomes for any Investment Period.**

The Fund includes a mix of purchased and written (sold) put and call options structured to achieve the results described above. The Fund is designed to seek to achieve the results described above for investments made on the Initial Investment Day and held until the last day of the Investment Period. **Investments made on any day other than the Initial Investment Day may differ significantly, positively or negatively, from the results described above.** The Fund's website, www.true-shares.com, contains information about the Fund's holdings, and the level of the S&P 500 Price Index as of the Initial Investment Day and the prior business day to assist an investor in understanding and the range of results such investor can expect for investments made at times other than on the Initial Investment Day.

Additionally, the Fund's website provides information relating to the returns of the Fund, including the Fund's Buffer and its position relative to the S&P 500 Price Index on a daily basis.

The Fund's operations are intended to be continuous. It will not terminate and distribute its assets at the conclusion of each Investment Period. On each Roll Date, another Investment Period will commence and the Fund will invest in a new set of options.

The Fund is classified as "non-diversified" under the Investment Company Act of 1940, as amended (the "1940 Act").

Principal Investment Risks

The principal risks of investing in the Fund are summarized below. The principal risks are presented in alphabetical order to facilitate finding particular risks and comparing them with those of other funds. Each risk summarized below is considered a "principal risk" of investing in the Fund, regardless of the order in which it appears. As with any investment, there is a risk that you could lose all or a portion of your investment in the Fund. Some or all of these risks may adversely affect the Fund's net asset value per share ("NAV"), trading price, yield, total return and/or ability to meet its objectives.

- **Buffered Strategy Investment Risk.**

- *Buffered Loss Risk.* There can be no guarantee that the Fund will be successful in its strategy to provide buffer protection against S&P 500 Price Index losses if the S&P 500 Price Index decreases over the Investment Period by 8% or less. A shareholder may lose their entire investment. The Fund's strategy seeks to deliver returns that match the S&P 500 Price Index (but will be less than the S&P 500 Price Index due to the cost of the options used by the Fund), while limiting downside losses, if Shares are bought on the day on which the Fund enters into the options and held until those options expire at the end of each Investment Period. In the event an investor purchases Shares after the date on which the options were entered into or sells Shares prior to the expiration of the options, the buffer that the Fund seeks to provide may not be available. The Fund does not provide principal protection and an investor may experience significant losses on its investment, including the loss of its entire investment.
- *FLEX Options Risk.* The Fund may invest in FLEX Options issued and guaranteed for settlement by the OCC. The Fund bears the risk that the OCC will be unable or unwilling to perform its obligations under the FLEX Options contracts. Additionally, FLEX Options may be illiquid, and in such cases, the Fund may have difficulty closing out certain FLEX Options positions at desired times and prices.
- *Options Risk.* The Fund invests in options that derive their performance from the performance of the S&P 500 Price Index. Writing and buying options are speculative activities and entail investment exposures that are greater than their cost would suggest, meaning that a small investment in an option could have a substantial impact on the performance of the Fund. The Fund's use of call and put options can lead to losses because of adverse movements in the price or value of the underlying stock, index, or other asset, which may be magnified by certain features of the options. These risks are heightened when the Fund's portfolio managers use options to enhance the Fund's return or as a substitute for a position or security. When selling a call or put option, the Fund will receive a premium; however, this premium may not be enough to offset a loss incurred by the Fund if the price of the underlying asset is above or below, respectively, the strike price by an amount equal to or greater than the premium. The value of an option may be adversely affected if the market for the option becomes less liquid or smaller, and will be affected by changes in the value or yield of the option's underlying asset, an increase in interest rates, a change in the actual or perceived volatility of the stock market or the underlying asset and the remaining time to expiration. Additionally, the value of an option does not increase or decrease at the same rate as the underlying asset(s). The Fund's use of options, due to the cost of the options, will reduce the Fund's ability to get returns equal to the S&P 500 Price Index. This means that if the S&P 500 Price Index experiences gains for an Investment Period, the Fund will not benefit to the same extent from those gains. In addition, if the price of the underlying asset of an option is above the strike price of a written call option or below the strike price for a written put option, the value of the option, and consequently of the Fund, may decline significantly more than if the Fund invested directly in the underlying asset instead of using options. The Fund invests in options that derive their performance from the performance of the S&P 500 Price Index and can be volatile and involve various types and degrees of risks. The Fund could experience a loss if its options do not perform as anticipated, or are not correlated with the performance of their underlying stock or if the Fund is unable to purchase or liquidate a position because of an illiquid secondary market.
- *Purchase and Sale Timing Risk.* The Fund is designed to protect against the first 8% to 12% decline in the value of the S&P 500 Price Index and provide for participation in any gains, although not to the same extent, as the value of the S&P 500 Price Index, for a 12-month period from one Roll Date to the next Roll Date. Because the options purchased and written by the Fund will expire on the next Roll Date, if you purchase or sell Shares on a date other than a Roll Date or if you hold Shares for more or less than the time from the most recent Roll Date to the next Roll Date, the value of your investment in Shares may not be protected against the first 8% to 12% decline in the value of the S&P 500 Price Index and may not participate in a gain in the value of the S&P 500 Price Index for your investment period. The value of the options purchased and written by the Fund is dependent on, among other factors, the value, implied volatility, and implied dividend rate of the S&P 500 Price Index and interest rates, any or all of which may vary, sometimes significantly, during the period from the most recent Roll Date to the next Roll Date. Consequently, the value of the Fund may not directly track changes in the value of the S&P 500 Price Index in between Roll Dates.

- **Equity Market Risk.** The Fund invests in options that derive their performance from the S&P 500 Price Index, which is made up of common stocks. Common stocks are susceptible to general stock market fluctuations and to volatile increases and decreases in value as market confidence in and perceptions of their issuers change. These investor perceptions are based on various and unpredictable factors including: expectations regarding government, economic, monetary and fiscal policies; inflation and interest rates; economic expansion or contraction; and global or regional political, economic and banking crises.
- **ETF Risks.** The Fund is an ETF and, as a result of this structure, it is exposed to the following risks:
 - *Authorized Participants (“APs”), Market Makers, and Liquidity Providers Concentration Risk.* The Fund has a limited number of financial institutions that may act as APs. In addition, there may be a limited number of market makers and/or liquidity providers in the marketplace. To the extent either of the following events occur, Shares may trade at a material discount to NAV and possibly face delisting: (i) APs exit the business or otherwise become unable to process creation and/or redemption orders and no other APs step forward to perform these services, or (ii) market makers and/or liquidity providers exit the business or significantly reduce their business activities and no other entities step forward to perform their functions.
 - *Costs of Buying or Selling Shares.* Due to the costs of buying or selling Shares, including brokerage commissions imposed by brokers and bid/ask spreads, frequent trading of Shares may significantly reduce investment results and an investment in Shares may not be advisable for investors who anticipate regularly making small investments.
 - *Shares May Trade at Prices Other Than NAV.* As with all ETFs, Shares may be bought and sold in the secondary market at market prices. Although it is expected that the market price of Shares will approximate the Fund’s NAV, there may be times when the market price of Shares is more than the NAV intra-day (premium) or less than the NAV intra-day (discount) due to supply and demand of Shares or during periods of market volatility. This risk is heightened in times of market volatility, periods of steep market declines, and periods when there is limited trading activity for Shares in the secondary market, in which case such premiums or discounts may be significant.
 - *Trading.* Although Shares are listed for trading on the Cboe BZX Exchange, Inc. (the “Exchange”) and may be traded on U.S. exchanges other than the Exchange, there can be no assurance that Shares will trade with any volume, or at all, on any stock exchange. In stressed market conditions, the liquidity of Shares may begin to mirror the liquidity of the Fund’s underlying portfolio holdings, which can be significantly less liquid than Shares.
- **Management Risk.** The Fund is actively-managed and may not meet its investment objective based on the investment adviser’s and sub-adviser’s success or failure to implement investment strategies for the Fund.
- **New Fund Risk.** The Fund is a recently organized, non-diversified management investment company with no operating history. As a result, prospective investors have no track record or history on which to base their investment decision.
- **Non-Diversification Risk.** Although the Fund may invest in a variety of securities and instruments, the Fund will be considered to be non-diversified, which means that it may invest more of its assets in the securities of a single issuer or a smaller number of issuers than if it were a diversified fund. As a result, the Fund may be more exposed to the risks associated with and developments affecting an individual issuer or a smaller number of issuers than a fund that invests more widely. This may increase the Fund’s volatility and cause the performance of a relatively smaller number of issuers to have a greater impact on the Fund’s performance. However, the Fund intends to satisfy the asset diversification requirements for qualifying as a regulated investment company (“RIC”) under Subchapter M of the Internal Revenue Code of 1986, as amended (the “Code”).
- **Portfolio Turnover Risk.** Because the Fund may “turn over” some or all of its options as frequently as monthly, the Fund may incur high levels of transaction costs from commissions or mark-ups in the bid/offer spread. Higher portfolio turnover may result in the Fund paying higher levels of transaction costs and generating greater tax liabilities for shareholders. Portfolio turnover risk may cause the Fund’s performance to be less than you expect. While the turnover of the call options is not deemed “portfolio turnover” for accounting purposes, the economic impact to the Fund is similar to what could occur if the Fund experienced high portfolio turnover (e.g., in excess of 100% per year).
- **Tax Efficiency Risk.** A significant portion of income received from the Fund may be subject to tax at effective tax rates that are higher than the rates that would apply if the Fund were to engage in a different investment strategy. Additionally, the Fund’s investment strategy may require it to effect redemptions, in whole or in part, for cash. As a result, the Fund may be required to sell portfolio securities to obtain the cash needed to distribute redemption proceeds. This may cause the Fund to recognize investment income and/or capital gains or losses that it might not have recognized if it had completely satisfied the redemption in-kind. As a result, the Fund may be less tax efficient if it includes such a cash payment than if the in-kind redemption process was used exclusively. In addition, cash redemptions may incur higher brokerage costs than in-kind redemptions and these added costs may be borne by the Fund and negatively impact Fund performance. You should consult your tax advisor as to the tax consequences of purchasing, owning, and selling Shares.
- **U.S. Treasury Obligations Risk.** U.S. Treasury obligations may differ from other fixed income securities in their interest rates, maturities, times of issuance and other characteristics. Similar to other issuers, changes to the financial condition or credit rating of the U.S. government may cause the value of the Fund’s U.S. Treasury obligations to decline.

Performance

The Fund is new and therefore does not have a performance history for a full calendar year. In the future, performance information for the Fund will be presented in this section. Updated performance information is available on the Fund's website at www.true-shares.com or by calling the Fund toll free at 1-800-617-0004.

Management

Investment Adviser

TrueMark Investments, LLC serves as investment adviser to the Fund.

Sub-Adviser

SpiderRock Advisors, LLC serves as investment sub-adviser to the Fund

Portfolio Managers

Jordan C. Waldrep, CFA, Chief Investment Officer for the Adviser, Eric Metz, Chief Investment Officer for the Sub-Adviser and Fred Sloneker, Portfolio Manager for the Sub-Adviser, have been portfolio managers of the Fund since its inception in 2020.

Purchase and Sale of Shares

Shares are listed on the Exchange, and most investors will buy and sell Shares through brokers at market prices, rather than NAV. Because Shares trade at market prices rather than NAV, Shares may trade at a price greater than NAV (premium) or less than NAV (discount). The Fund issues and redeems Shares at NAV only in large blocks known as "Creation Units," which only APs (typically, broker-dealers) may purchase or redeem. Creation Units of the Fund generally consist of at least 25,000 Shares, though this may change from time to time. The Fund generally issues and redeems Creation Units in exchange for a portfolio of securities closely approximating the holdings of the Fund (the "Deposit Securities") and/or a designated amount of cash.

Tax Information

Fund distributions are generally taxable as ordinary income, qualified dividend income, or capital gains (or a combination), unless your investment is in an individual retirement account ("IRA") or other tax-advantaged account. Distributions on investments made through tax-deferred arrangements may be taxed later upon withdrawal of assets from those accounts.

Financial Intermediary Compensation

If you purchase Shares through a broker-dealer or other financial intermediary (such as a bank) (an "Intermediary"), the Adviser or its affiliates may pay Intermediaries for certain activities related to the Fund, including participation in activities that are designed to make Intermediaries more knowledgeable about exchange traded products, including the Fund, or for other activities, such as marketing, educational training or other initiatives related to the sale or promotion of Shares. These payments may create a conflict of interest by influencing the Intermediary and your salesperson to recommend the Fund over another investment. Any such arrangements do not result in increased Fund expenses. Ask your salesperson or visit the Intermediary's website for more information.

TRUESHARES STRUCTURED OUTCOME (NOVEMBER) ETF

Investment Objective

The Fund seeks to provide investors with returns (before fees and expenses) that track those of the S&P 500 Price Return Index (the “S&P 500 Price Index”) while seeking to provide a buffer against the first 8% to 12% of S&P 500 Price Index losses, over the period from November 1, 2020 to October 31, 2021.

Fees and Expenses of the Fund

This table describes the fees and expenses that you may pay if you buy, hold or sell shares of the Fund (“Shares”). This table and the Example below do not include the brokerage commissions that investors may pay on their purchases and sales of Shares.

Shareholder Fees <i>(fees paid directly from your investment)</i>	None
Annual Fund Operating Expenses <i>(expenses that you pay each year as a percentage of the value of your investment)</i>	
Management Fees	0.79%
Distribution and/or Service (12b-1) Fees	0.00%
Other Expenses*	0.00%
Total Annual Fund Operating Expenses	0.79%

* Estimated for the current fiscal year.

Example

This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. The Example assumes that you invest \$10,000 in the Fund for the time periods indicated and then redeem all of your Shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the Fund’s operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

1 Year: \$81

3 Years: \$252

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Shares are held in a taxable account. These costs, which are not reflected in the Annual Fund Operating Expenses or in the Example, affect the Fund’s performance. Because the Fund is newly organized, portfolio turnover information is not yet available.

Principal Investment Strategy

The Fund is an actively-managed exchange-traded fund (“ETF”) that seeks to achieve its investment objective by investing substantially all of its assets in options that reference the S&P 500 Price Index. The Fund’s investment adviser, TrueMark Investments, LLC (“TrueMark”), and sub-adviser, SpiderRock Advisors, LLC (“SpiderRock”), will employ a “buffer protect” options strategy that uses such options to seek to achieve exposure to the S&P 500 Price Index while mitigating the first 8% to 12% decline in the S&P 500 Price Index (the “Buffer”) over a 12-month period beginning on a specified day each November (each, a “Roll Date”). The period from one Roll Date to the next Roll Date is referred to as the “Investment Period,” and the first day of the Investment Period is referred to as the “Initial Investment Day”).

The Fund will purchase call options and sell (write) put options on the S&P 500 Price Index or an ETF that tracks the S&P 500 Price Index on each Initial Investment Day with an expiration on the next Roll Date. An option gives the purchaser of the option the right to purchase (for a call option) or sell (for a put option) the underlying asset (or deliver cash equal to the value of an underlying index) at a specified price (“strike price”). In the event the underlying asset declines in value, the value of a put option will generally increase (and the value of a call option will generally decrease and may end up worthless), and in the event the underlying asset appreciates in value, the value of a put option will generally decrease and may end up worthless (and the value of a call option will generally increase).

On each Initial Investment Day, the Fund will sell (write) put options on the S&P 500 Price Index or an ETF that tracks the S&P 500 Price Index with a strike price within a range of approximately 8% to 12% lower than the current value of the S&P 500 Price Index or an ETF that tracks the S&P 500 Price Index. As the seller of these options, the Fund receives a premium from the buyer of the options, which the Fund invests in at-the-money call options on the S&P 500 Price Index or an ETF that tracks the S&P 500 Price Index (*i.e.*, call options having a strike price roughly equal to the current value of the S&P 500 Price Index or an ETF that tracks the S&P 500 Price Index). The relative price of the put options sold (written) by the Fund to the price of the call options purchased by the Fund will determine

the Fund’s exposure to the S&P 500 Price Index during the Investment Period. **Due to the cost of the options used by the Fund, the correlation of the Fund’s performance to that of the S&P 500 Price Index is expected to be less than if the Fund invested directly in the S&P 500 Price Index without using options, and could be substantially less.** This means that if the S&P 500 Price Index experiences gains for an Investment Period, the Fund may not realize gains to the same extent.

The Fund’s strategy is to seek to protect investors from a decline of up to 8% to 12% in the performance of the S&P 500 Price Index from one Roll Date to the next Roll Date. When the Adviser or Sub-Adviser sells puts on the S&P 500 Price Index to create the buffer range, the proceeds are used to purchase calls at the money. However, not all puts generate the same premium relative to the downside exposure of the Fund. The Adviser will seek to deliver a buffer of 10% from the reference price of the S&P 500 Price Index on the first trading day of the month. However, the market could fluctuate on or after the buffer is set and this range allows for market condition volatility. **The Fund is not designed to protect against declines of more than 8% to 12% in the level of the S&P 500 Price Index, and there can be no guarantee that the Fund will be successful in implementing the buffer protect options strategy to avoid the first 8% to 12% decline.** Additionally, even if the Fund mitigates a decline in the performance of the S&P 500 Price Index from one Roll Date to the next Roll Date, the Fund’s returns during the Investment Period (prior to the next Roll Date) may not reflect the buffer protect options strategy.

The Fund will invest in standardized exchange-listed options or in exchange-traded FLEXible EXchange Options (“FLEX Options”), which are customized exchange-traded option contracts available through the Chicago Board Option Exchange (“Cboe”) that are guaranteed for settlement by The Options Clearing Corporation (“OCC”). FLEX Options provide investors with the ability to customize exercise prices, exercise styles, and expiration dates, while achieving price discovery in competitive, transparent, auction markets and avoiding the counterparty exposure of over-the-counter (“OTC”) options positions. All FLEX Options in the Fund are European-style options (*i.e.*, they can only be exercised at the expiration date of the option) based on the S&P 500 Price Index or an ETF that tracks the S&P 500 Price Index and have an expiration date that is the last day of the Investment Period. In general, the Fund intends to invest in FLEX options only, as these options provide the best combination of OCC guarantees, price discovery, customization, and European-style settlement that is ideal for the Fund. However in certain unforeseen circumstances, listed options may be used by the Fund to provide an additional source of desired market exposure. The Fund also expects to invest in U.S. Treasury bonds.

The Fund is designed to provide the following outcomes during each individual Investment Period:

Change in the Returns of the S&P 500 Price Index	Expected Change in the Returns of the Fund
Declines between -8% and -12% (or more)	Declines 8% to 12% percentage points less than the S&P 500 Price Index (<i>e.g.</i> , if the S&P 500 Price Index returns -35%, the Fund is designed to return -23% to -27%)
Declines between 0% and -8%	No change
Appreciates	The Fund’s returns will appreciate to a similar extent as the S&P 500 Price Index, but will be less than those of the S&P 500 Price Index due to the cost of the options used by the Fund

The following charts illustrate the hypothetical returns that the Fund seeks to provide in certain illustrative scenarios for a shareholder that purchases Fund shares on the Initial Investment Day and holds such shares for the entire Investment Period. These charts do not take into account payment by the Fund of fees and expenses and assume a buffer of 10%. **There is no guarantee that the Fund will be successful in providing these investment outcomes for any Investment Period.**

The Fund includes a mix of purchased and written (sold) put and call options structured to achieve the results described above. The Fund is designed to seek to achieve the results described above for investments made on the Initial Investment Day and held until the last day of the Investment Period. **Investments made on any day other than the Initial Investment Day may differ significantly, positively or negatively, from the results described above.** The Fund's website, www.true-shares.com, contains information about the Fund's holdings, and the level of the S&P 500 Price Index as of the Initial Investment Day and the prior business day to assist an investor in understanding and the range of results such investor can expect for investments made at times other than on the Initial Investment Day.

Additionally, the Fund's website provides information relating to the returns of the Fund, including the Fund's Buffer and its position relative to the S&P 500 Price Index on a daily basis.

The Fund's operations are intended to be continuous. It will not terminate and distribute its assets at the conclusion of each Investment Period. On each Roll Date, another Investment Period will commence and the Fund will invest in a new set of options.

The Fund is classified as "non-diversified" under the Investment Company Act of 1940, as amended (the "1940 Act").

Principal Investment Risks

The principal risks of investing in the Fund are summarized below. The principal risks are presented in alphabetical order to facilitate finding particular risks and comparing them with those of other funds. Each risk summarized below is considered a "principal risk" of investing in the Fund, regardless of the order in which it appears. As with any investment, there is a risk that you could lose all or a portion of your investment in the Fund. Some or all of these risks may adversely affect the Fund's net asset value per share ("NAV"), trading price, yield, total return and/or ability to meet its objectives.

- **Buffered Strategy Investment Risk.**

- *Buffered Loss Risk.* There can be no guarantee that the Fund will be successful in its strategy to provide buffer protection against S&P 500 Price Index losses if the S&P 500 Price Index decreases over the Investment Period by 8% or less. A shareholder may lose their entire investment. The Fund's strategy seeks to deliver returns that match the S&P 500 Price Index (but will be less than the S&P 500 Price Index due to the cost of the options used by the Fund), while limiting downside losses, if Shares are bought on the day on which the Fund enters into the options and held until those options expire at the end of each Investment Period. In the event an investor purchases Shares after the date on which the options were entered into or sells Shares prior to the expiration of the options, the buffer that the Fund seeks to provide may not be available. The Fund does not provide principal protection and an investor may experience significant losses on its investment, including the loss of its entire investment.
- *FLEX Options Risk.* The Fund may invest in FLEX Options issued and guaranteed for settlement by the OCC. The Fund bears the risk that the OCC will be unable or unwilling to perform its obligations under the FLEX Options contracts. Additionally, FLEX Options may be illiquid, and in such cases, the Fund may have difficulty closing out certain FLEX Options positions at desired times and prices.
- *Options Risk.* The Fund invests in options that derive their performance from the performance of the S&P 500 Price Index. Writing and buying options are speculative activities and entail investment exposures that are greater than their cost would suggest, meaning that a small investment in an option could have a substantial impact on the performance of the Fund. The Fund's use of call and put options can lead to losses because of adverse movements in the price or value of the underlying stock, index, or other asset, which may be magnified by certain features of the options. These risks are heightened when the Fund's portfolio managers use options to enhance the Fund's return or as a substitute for a position or security. When selling a call or put option, the Fund will receive a premium; however, this premium may not be enough to offset a loss incurred by the Fund if the price of the underlying asset is above or below, respectively, the strike price by an amount equal to or greater than the premium. The value of an option may be adversely affected if the market for the option becomes less liquid or smaller, and will be affected by changes in the value or yield of the option's underlying asset, an increase in interest rates, a change in the actual or perceived volatility of the stock market or the underlying asset and the remaining time to expiration. Additionally, the value of an option does not increase or decrease at the same rate as the underlying asset(s). The Fund's use of options, due to the cost of the options, will reduce the Fund's ability to get returns equal to the S&P 500 Price Index. This means that if the S&P 500 Price Index experiences gains for an Investment Period, the Fund will not benefit to the same extent from those gains. In addition, if the price of the underlying asset of an option is above the strike price of a written call option or below the strike price for a written put option, the value of the option, and consequently of the Fund, may decline significantly more than if the Fund invested directly in the underlying asset instead of using options. The Fund invests in options that derive their performance from the performance of the S&P 500 Price Index and can be volatile and involve various types and degrees of risks. The Fund could experience a loss if its options do not perform as anticipated, or are not correlated with the performance of their underlying stock or if the Fund is unable to purchase or liquidate a position because of an illiquid secondary market.
- *Purchase and Sale Timing Risk.* The Fund is designed to protect against the first 8% to 12% decline in the value of the S&P 500 Price Index and provide for participation in any gains, although not to the same extent, as the value of the S&P 500 Price Index, for a 12-month period from one Roll Date to the next Roll Date. Because the options purchased and written by the Fund will expire on the next Roll Date, if you purchase or sell Shares on a date other than a Roll Date or if you hold Shares for more or less than the time from the most recent Roll Date to the next Roll Date, the value of your investment in Shares may not be protected against the first 8% to 12% decline in the value of the S&P 500 Price Index and may not participate in a gain in the value of the S&P 500 Price Index for your investment period. The value of the options purchased and written by the Fund is dependent on, among other factors, the value, implied volatility, and implied dividend rate of the S&P 500 Price Index and interest rates, any or all of which may vary, sometimes significantly, during the period from the most recent Roll Date to the next Roll Date. Consequently, the value of the Fund may not directly track changes in the value of the S&P 500 Price Index in between Roll Dates.

- **Equity Market Risk.** The Fund invests in options that derive their performance from the S&P 500 Price Index, which is made up of common stocks. Common stocks are susceptible to general stock market fluctuations and to volatile increases and decreases in value as market confidence in and perceptions of their issuers change. These investor perceptions are based on various and unpredictable factors including: expectations regarding government, economic, monetary and fiscal policies; inflation and interest rates; economic expansion or contraction; and global or regional political, economic and banking crises.
- **ETF Risks.** The Fund is an ETF and, as a result of this structure, it is exposed to the following risks:
 - *Authorized Participants (“APs”), Market Makers, and Liquidity Providers Concentration Risk.* The Fund has a limited number of financial institutions that may act as APs. In addition, there may be a limited number of market makers and/or liquidity providers in the marketplace. To the extent either of the following events occur, Shares may trade at a material discount to NAV and possibly face delisting: (i) APs exit the business or otherwise become unable to process creation and/or redemption orders and no other APs step forward to perform these services, or (ii) market makers and/or liquidity providers exit the business or significantly reduce their business activities and no other entities step forward to perform their functions.
 - *Costs of Buying or Selling Shares.* Due to the costs of buying or selling Shares, including brokerage commissions imposed by brokers and bid/ask spreads, frequent trading of Shares may significantly reduce investment results and an investment in Shares may not be advisable for investors who anticipate regularly making small investments.
 - *Shares May Trade at Prices Other Than NAV.* As with all ETFs, Shares may be bought and sold in the secondary market at market prices. Although it is expected that the market price of Shares will approximate the Fund’s NAV, there may be times when the market price of Shares is more than the NAV intra-day (premium) or less than the NAV intra-day (discount) due to supply and demand of Shares or during periods of market volatility. This risk is heightened in times of market volatility, periods of steep market declines, and periods when there is limited trading activity for Shares in the secondary market, in which case such premiums or discounts may be significant.
 - *Trading.* Although Shares are listed for trading on the Cboe BZX Exchange, Inc. (the “Exchange”) and may be traded on U.S. exchanges other than the Exchange, there can be no assurance that Shares will trade with any volume, or at all, on any stock exchange. In stressed market conditions, the liquidity of Shares may begin to mirror the liquidity of the Fund’s underlying portfolio holdings, which can be significantly less liquid than Shares.
- **Management Risk.** The Fund is actively-managed and may not meet its investment objective based on the investment adviser’s and sub-adviser’s success or failure to implement investment strategies for the Fund.
- **New Fund Risk.** The Fund is a recently organized, non-diversified management investment company with no operating history. As a result, prospective investors have no track record or history on which to base their investment decision.
- **Non-Diversification Risk.** Although the Fund may invest in a variety of securities and instruments, the Fund will be considered to be non-diversified, which means that it may invest more of its assets in the securities of a single issuer or a smaller number of issuers than if it were a diversified fund. As a result, the Fund may be more exposed to the risks associated with and developments affecting an individual issuer or a smaller number of issuers than a fund that invests more widely. This may increase the Fund’s volatility and cause the performance of a relatively smaller number of issuers to have a greater impact on the Fund’s performance. However, the Fund intends to satisfy the asset diversification requirements for qualifying as a regulated investment company (“RIC”) under Subchapter M of the Internal Revenue Code of 1986, as amended (the “Code”).
- **Portfolio Turnover Risk.** Because the Fund may “turn over” some or all of its options as frequently as monthly, the Fund may incur high levels of transaction costs from commissions or mark-ups in the bid/offer spread. Higher portfolio turnover may result in the Fund paying higher levels of transaction costs and generating greater tax liabilities for shareholders. Portfolio turnover risk may cause the Fund’s performance to be less than you expect. While the turnover of the call options is not deemed “portfolio turnover” for accounting purposes, the economic impact to the Fund is similar to what could occur if the Fund experienced high portfolio turnover (e.g., in excess of 100% per year).
- **Tax Efficiency Risk.** A significant portion of income received from the Fund may be subject to tax at effective tax rates that are higher than the rates that would apply if the Fund were to engage in a different investment strategy. Additionally, the Fund’s investment strategy may require it to effect redemptions, in whole or in part, for cash. As a result, the Fund may be required to sell portfolio securities to obtain the cash needed to distribute redemption proceeds. This may cause the Fund to recognize investment income and/or capital gains or losses that it might not have recognized if it had completely satisfied the redemption in-kind. As a result, the Fund may be less tax efficient if it includes such a cash payment than if the in-kind redemption process was used exclusively. In addition, cash redemptions may incur higher brokerage costs than in-kind redemptions and these added costs may be borne by the Fund and negatively impact Fund performance. You should consult your tax advisor as to the tax consequences of purchasing, owning, and selling Shares.
- **U.S. Treasury Obligations Risk.** U.S. Treasury obligations may differ from other fixed income securities in their interest rates, maturities, times of issuance and other characteristics. Similar to other issuers, changes to the financial condition or credit rating of the U.S. government may cause the value of the Fund’s U.S. Treasury obligations to decline.

Performance

The Fund is new and therefore does not have a performance history for a full calendar year. In the future, performance information for the Fund will be presented in this section. Updated performance information is available on the Fund's website at www.true-shares.com or by calling the Fund toll free at 1-800-617-0004.

Management

Investment Adviser

TrueMark Investments, LLC serves as investment adviser to the Fund.

Sub-Adviser

SpiderRock Advisors, LLC serves as investment sub-adviser to the Fund

Portfolio Managers

Jordan C. Waldrep, CFA, Chief Investment Officer for the Adviser, Eric Metz, Chief Investment Officer for the Sub-Adviser and Fred Sloneker, Portfolio Manager for the Sub-Adviser, have been portfolio managers of the Fund since its inception in 2020.

Purchase and Sale of Shares

Shares are listed on the Exchange, and most investors will buy and sell Shares through brokers at market prices, rather than NAV. Because Shares trade at market prices rather than NAV, Shares may trade at a price greater than NAV (premium) or less than NAV (discount). The Fund issues and redeems Shares at NAV only in large blocks known as "Creation Units," which only APs (typically, broker-dealers) may purchase or redeem. Creation Units of the Fund generally consist of at least 25,000 Shares, though this may change from time to time. The Fund generally issues and redeems Creation Units in exchange for a portfolio of securities closely approximating the holdings of the Fund (the "Deposit Securities") and/or a designated amount of cash.

Tax Information

Fund distributions are generally taxable as ordinary income, qualified dividend income, or capital gains (or a combination), unless your investment is in an individual retirement account ("IRA") or other tax-advantaged account. Distributions on investments made through tax-deferred arrangements may be taxed later upon withdrawal of assets from those accounts.

Financial Intermediary Compensation

If you purchase Shares through a broker-dealer or other financial intermediary (such as a bank) (an "Intermediary"), the Adviser or its affiliates may pay Intermediaries for certain activities related to the Fund, including participation in activities that are designed to make Intermediaries more knowledgeable about exchange traded products, including the Fund, or for other activities, such as marketing, educational training or other initiatives related to the sale or promotion of Shares. These payments may create a conflict of interest by influencing the Intermediary and your salesperson to recommend the Fund over another investment. Any such arrangements do not result in increased Fund expenses. Ask your salesperson or visit the Intermediary's website for more information.

TRUESHARES STRUCTURED OUTCOME (DECEMBER) ETF

Investment Objective

The Fund seeks to provide investors with returns (before fees and expenses) that track those of the S&P 500 Price Return Index (the “S&P 500 Price Index”) while seeking to provide a buffer against the first 8% to 12% of S&P 500 Price Index losses, over the period from December 1, 2020 to November 30, 2021.

Fees and Expenses of the Fund

This table describes the fees and expenses that you may pay if you buy, hold or sell shares of the Fund (“Shares”). This table and the Example below do not include the brokerage commissions that investors may pay on their purchases and sales of Shares.

Shareholder Fees <i>(fees paid directly from your investment)</i>	None
Annual Fund Operating Expenses <i>(expenses that you pay each year as a percentage of the value of your investment)</i>	
Management Fees	0.79%
Distribution and/or Service (12b-1) Fees	0.00%
Other Expenses*	0.00%
Total Annual Fund Operating Expenses	0.79%

* Estimated for the current fiscal year.

Example

This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. The Example assumes that you invest \$10,000 in the Fund for the time periods indicated and then redeem all of your Shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the Fund’s operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

1 Year: \$81

3 Years: \$252

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Shares are held in a taxable account. These costs, which are not reflected in the Annual Fund Operating Expenses or in the Example, affect the Fund’s performance. Because the Fund is newly organized, portfolio turnover information is not yet available.

Principal Investment Strategy

The Fund is an actively-managed exchange-traded fund (“ETF”) that seeks to achieve its investment objective by investing substantially all of its assets in options that reference the S&P 500 Price Index. The Fund’s investment adviser, TrueMark Investments, LLC (“TrueMark”), and sub-adviser, SpiderRock Advisors, LLC (“SpiderRock”), will employ a “buffer protect” options strategy that uses such options to seek to achieve exposure to the S&P 500 Price Index while mitigating the first 8% to 12% decline in the S&P 500 Price Index (the “Buffer”) over a 12-month period beginning on a specified day each December (each, a “Roll Date”). The period from one Roll Date to the next Roll Date is referred to as the “Investment Period,” and the first day of the Investment Period is referred to as the “Initial Investment Day”).

The Fund will purchase call options and sell (write) put options on the S&P 500 Price Index or an ETF that tracks the S&P 500 Price Index on each Initial Investment Day with an expiration on the next Roll Date. An option gives the purchaser of the option the right to purchase (for a call option) or sell (for a put option) the underlying asset (or deliver cash equal to the value of an underlying index) at a specified price (“strike price”). In the event the underlying asset declines in value, the value of a put option will generally increase (and the value of a call option will generally decrease and may end up worthless), and in the event the underlying asset appreciates in value, the value of a put option will generally decrease and may end up worthless (and the value of a call option will generally increase).

On each Initial Investment Day, the Fund will sell (write) put options on the S&P 500 Price Index or an ETF that tracks the S&P 500 Price Index with a strike price within a range of approximately 8% to 12% lower than the current value of the S&P 500 Price Index or an ETF that tracks the S&P 500 Price Index. As the seller of these options, the Fund receives a premium from the buyer of the options, which the Fund invests in at-the-money call options on the S&P 500 Price Index or an ETF that tracks the S&P 500 Price Index (*i.e.*, call options having a strike price roughly equal to the current value of the S&P 500 Price Index or an ETF that tracks the S&P 500 Price Index). The relative price of the put options sold (written) by the Fund to the price of the call options purchased by the Fund will determine

the Fund's exposure to the S&P 500 Price Index during the Investment Period. **Due to the cost of the options used by the Fund, the correlation of the Fund's performance to that of the S&P 500 Price Index is expected to be less than if the Fund invested directly in the S&P 500 Price Index without using options, and could be substantially less.** This means that if the S&P 500 Price Index experiences gains for an Investment Period, the Fund may not realize gains to the same extent.

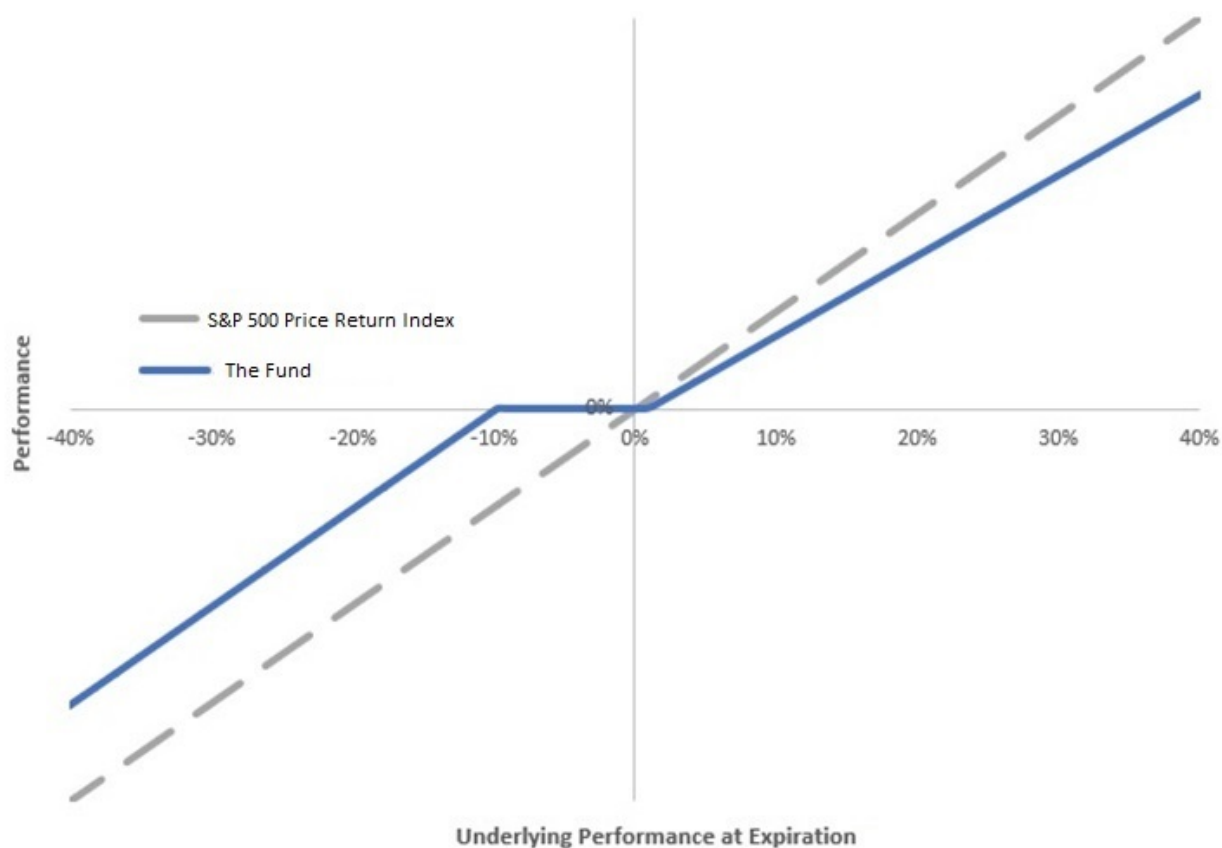

The Fund's strategy is to seek to protect investors from a decline of up to 8% to 12% in the performance of the S&P 500 Price Index from one Roll Date to the next Roll Date. When the Adviser or Sub-Adviser sells puts on the S&P 500 Price Index to create the buffer range, the proceeds are used to purchase calls at the money. However, not all puts generate the same premium relative to the downside exposure of the Fund. The Adviser will seek to deliver a buffer of 10% from the reference price of the S&P 500 Price Index on the first trading day of the month. However, the market could fluctuate on or after the buffer is set and this range allows for market condition volatility. **The Fund is not designed to protect against declines of more than 8% to 12% in the level of the S&P 500 Price Index, and there can be no guarantee that the Fund will be successful in implementing the buffer protect options strategy to avoid the first 8% to 12% decline.** Additionally, even if the Fund mitigates a decline in the performance of the S&P 500 Price Index from one Roll Date to the next Roll Date, the Fund's returns during the Investment Period (prior to the next Roll Date) may not reflect the buffer protect options strategy.

The Fund will invest in standardized exchange-listed options or in exchange-traded FLEXible EXchange Options ("FLEX Options"), which are customized exchange-traded option contracts available through the Chicago Board Option Exchange ("Cboe") that are guaranteed for settlement by The Options Clearing Corporation ("OCC"). FLEX Options provide investors with the ability to customize exercise prices, exercise styles, and expiration dates, while achieving price discovery in competitive, transparent, auction markets and avoiding the counterparty exposure of over-the-counter ("OTC") options positions. All FLEX Options in the Fund are European-style options (*i.e.*, they can only be exercised at the expiration date of the option) based on the S&P 500 Price Index or an ETF that tracks the S&P 500 Price Index and have an expiration date that is the last day of the Investment Period. In general, the Fund intends to invest in FLEX options only, as these options provide the best combination of OCC guarantees, price discovery, customization, and European-style settlement that is ideal for the Fund. However in certain unforeseen circumstances, listed options may be used by the Fund to provide an additional source of desired market exposure. The Fund also expects to invest in U.S. Treasury bonds.

The Fund is designed to provide the following outcomes during each individual Investment Period:

Change in the Returns of the S&P 500 Price Index	Expected Change in the Returns of the Fund
Declines between -8% and -12% (or more)	Declines 8% to 12% percentage points less than the S&P 500 Price Index (<i>e.g.</i> , if the S&P 500 Price Index returns -35%, the Fund is designed to return -23% to -27%)
Declines between 0% and -8%	No change
Appreciates	The Fund's returns will appreciate to a similar extent as the S&P 500 Price Index, but will be less than those of the S&P 500 Price Index due to the cost of the options used by the Fund

The following charts illustrate the hypothetical returns that the Fund seeks to provide in certain illustrative scenarios for a shareholder that purchases Fund shares on the Initial Investment Day and holds such shares for the entire Investment Period. These charts do not take into account payment by the Fund of fees and expenses and assume a buffer of 10%. **There is no guarantee that the Fund will be successful in providing these investment outcomes for any Investment Period.**

The Fund includes a mix of purchased and written (sold) put and call options structured to achieve the results described above. The Fund is designed to seek to achieve the results described above for investments made on the Initial Investment Day and held until the last day of the Investment Period. **Investments made on any day other than the Initial Investment Day may differ significantly, positively or negatively, from the results described above.** The Fund's website, www.true-shares.com, contains information about the Fund's holdings, and the level of the S&P 500 Price Index as of the Initial Investment Day and the prior business day to assist an investor in understanding and the range of results such investor can expect for investments made at times other than on the Initial Investment Day.

Additionally, the Fund's website provides information relating to the returns of the Fund, including the Fund's Buffer and its position relative to the S&P 500 Price Index on a daily basis.

The Fund's operations are intended to be continuous. It will not terminate and distribute its assets at the conclusion of each Investment Period. On each Roll Date, another Investment Period will commence and the Fund will invest in a new set of options.

The Fund is classified as "non-diversified" under the Investment Company Act of 1940, as amended (the "1940 Act").

Principal Investment Risks

The principal risks of investing in the Fund are summarized below. The principal risks are presented in alphabetical order to facilitate finding particular risks and comparing them with those of other funds. Each risk summarized below is considered a "principal risk" of investing in the Fund, regardless of the order in which it appears. As with any investment, there is a risk that you could lose all or a portion of your investment in the Fund. Some or all of these risks may adversely affect the Fund's net asset value per share ("NAV"), trading price, yield, total return and/or ability to meet its objectives.

- **Buffered Strategy Investment Risk.**

- *Buffered Loss Risk.* There can be no guarantee that the Fund will be successful in its strategy to provide buffer protection against S&P 500 Price Index losses if the S&P 500 Price Index decreases over the Investment Period by 8% or less. A shareholder may lose their entire investment. The Fund's strategy seeks to deliver returns that match the S&P 500 Price Index (but will be less than the S&P 500 Price Index due to the cost of the options used by the Fund), while limiting downside losses, if Shares are bought on the day on which the Fund enters into the options and held until those options expire at the end of each Investment Period. In the event an investor purchases Shares after the date on which the options were entered into or sells Shares prior to the expiration of the options, the buffer that the Fund seeks to provide may not be available. The Fund does not provide principal protection and an investor may experience significant losses on its investment, including the loss of its entire investment.
- *FLEX Options Risk.* The Fund may invest in FLEX Options issued and guaranteed for settlement by the OCC. The Fund bears the risk that the OCC will be unable or unwilling to perform its obligations under the FLEX Options contracts. Additionally, FLEX Options may be illiquid, and in such cases, the Fund may have difficulty closing out certain FLEX Options positions at desired times and prices.
- *Options Risk.* The Fund invests in options that derive their performance from the performance of the S&P 500 Price Index. Writing and buying options are speculative activities and entail investment exposures that are greater than their cost would suggest, meaning that a small investment in an option could have a substantial impact on the performance of the Fund. The Fund's use of call and put options can lead to losses because of adverse movements in the price or value of the underlying stock, index, or other asset, which may be magnified by certain features of the options. These risks are heightened when the Fund's portfolio managers use options to enhance the Fund's return or as a substitute for a position or security. When selling a call or put option, the Fund will receive a premium; however, this premium may not be enough to offset a loss incurred by the Fund if the price of the underlying asset is above or below, respectively, the strike price by an amount equal to or greater than the premium. The value of an option may be adversely affected if the market for the option becomes less liquid or smaller, and will be affected by changes in the value or yield of the option's underlying asset, an increase in interest rates, a change in the actual or perceived volatility of the stock market or the underlying asset and the remaining time to expiration. Additionally, the value of an option does not increase or decrease at the same rate as the underlying asset(s). The Fund's use of options, due to the cost of the options, will reduce the Fund's ability to get returns equal to the S&P 500 Price Index. This means that if the S&P 500 Price Index experiences gains for an Investment Period, the Fund will not benefit to the same extent from those gains. In addition, if the price of the underlying asset of an option is above the strike price of a written call option or below the strike price for a written put option, the value of the option, and consequently of the Fund, may decline significantly more than if the Fund invested directly in the underlying asset instead of using options. The Fund invests in options that derive their performance from the performance of the S&P 500 Price Index and can be volatile and involve various types and degrees of risks. The Fund could experience a loss if its options do not perform as anticipated, or are not correlated with the performance of their underlying stock or if the Fund is unable to purchase or liquidate a position because of an illiquid secondary market.
- *Purchase and Sale Timing Risk.* The Fund is designed to protect against the first 8% to 12% decline in the value of the S&P 500 Price Index and provide for participation in any gains, although not to the same extent, as the value of the S&P 500 Price Index, for a 12-month period from one Roll Date to the next Roll Date. Because the options purchased and written by the Fund will expire on the next Roll Date, if you purchase or sell Shares on a date other than a Roll Date or if you hold Shares for more or less than the time from the most recent Roll Date to the next Roll Date, the value of your investment in Shares may not be protected against the first 8% to 12% decline in the value of the S&P 500 Price Index and may not participate in a gain in the value of the S&P 500 Price Index for your investment period. The value of the options purchased and written by the Fund is dependent on, among other factors, the value, implied volatility, and implied dividend rate of the S&P 500 Price Index and interest rates, any or all of which may vary, sometimes significantly, during the period from the most recent Roll Date to the next Roll Date. Consequently, the value of the Fund may not directly track changes in the value of the S&P 500 Price Index in between Roll Dates.

- **Equity Market Risk.** The Fund invests in options that derive their performance from the S&P 500 Price Index, which is made up of common stocks. Common stocks are susceptible to general stock market fluctuations and to volatile increases and decreases in value as market confidence in and perceptions of their issuers change. These investor perceptions are based on various and unpredictable factors including: expectations regarding government, economic, monetary and fiscal policies; inflation and interest rates; economic expansion or contraction; and global or regional political, economic and banking crises.
- **ETF Risks.** The Fund is an ETF and, as a result of this structure, it is exposed to the following risks:
 - *Authorized Participants (“APs”), Market Makers, and Liquidity Providers Concentration Risk.* The Fund has a limited number of financial institutions that may act as APs. In addition, there may be a limited number of market makers and/or liquidity providers in the marketplace. To the extent either of the following events occur, Shares may trade at a material discount to NAV and possibly face delisting: (i) APs exit the business or otherwise become unable to process creation and/or redemption orders and no other APs step forward to perform these services, or (ii) market makers and/or liquidity providers exit the business or significantly reduce their business activities and no other entities step forward to perform their functions.
 - *Costs of Buying or Selling Shares.* Due to the costs of buying or selling Shares, including brokerage commissions imposed by brokers and bid/ask spreads, frequent trading of Shares may significantly reduce investment results and an investment in Shares may not be advisable for investors who anticipate regularly making small investments.
 - *Shares May Trade at Prices Other Than NAV.* As with all ETFs, Shares may be bought and sold in the secondary market at market prices. Although it is expected that the market price of Shares will approximate the Fund’s NAV, there may be times when the market price of Shares is more than the NAV intra-day (premium) or less than the NAV intra-day (discount) due to supply and demand of Shares or during periods of market volatility. This risk is heightened in times of market volatility, periods of steep market declines, and periods when there is limited trading activity for Shares in the secondary market, in which case such premiums or discounts may be significant.
 - *Trading.* Although Shares are listed for trading on the Cboe BZX Exchange, Inc. (the “Exchange”) and may be traded on U.S. exchanges other than the Exchange, there can be no assurance that Shares will trade with any volume, or at all, on any stock exchange. In stressed market conditions, the liquidity of Shares may begin to mirror the liquidity of the Fund’s underlying portfolio holdings, which can be significantly less liquid than Shares.
- **Management Risk.** The Fund is actively-managed and may not meet its investment objective based on the investment adviser’s and sub-adviser’s success or failure to implement investment strategies for the Fund.
- **New Fund Risk.** The Fund is a recently organized, non-diversified management investment company with no operating history. As a result, prospective investors have no track record or history on which to base their investment decision.
- **Non-Diversification Risk.** Although the Fund may invest in a variety of securities and instruments, the Fund will be considered to be non-diversified, which means that it may invest more of its assets in the securities of a single issuer or a smaller number of issuers than if it were a diversified fund. As a result, the Fund may be more exposed to the risks associated with and developments affecting an individual issuer or a smaller number of issuers than a fund that invests more widely. This may increase the Fund’s volatility and cause the performance of a relatively smaller number of issuers to have a greater impact on the Fund’s performance. However, the Fund intends to satisfy the asset diversification requirements for qualifying as a regulated investment company (“RIC”) under Subchapter M of the Internal Revenue Code of 1986, as amended (the “Code”).
- **Portfolio Turnover Risk.** Because the Fund may “turn over” some or all of its options as frequently as monthly, the Fund may incur high levels of transaction costs from commissions or mark-ups in the bid/offer spread. Higher portfolio turnover may result in the Fund paying higher levels of transaction costs and generating greater tax liabilities for shareholders. Portfolio turnover risk may cause the Fund’s performance to be less than you expect. While the turnover of the call options is not deemed “portfolio turnover” for accounting purposes, the economic impact to the Fund is similar to what could occur if the Fund experienced high portfolio turnover (e.g., in excess of 100% per year).
- **Tax Efficiency Risk.** A significant portion of income received from the Fund may be subject to tax at effective tax rates that are higher than the rates that would apply if the Fund were to engage in a different investment strategy. Additionally, the Fund’s investment strategy may require it to effect redemptions, in whole or in part, for cash. As a result, the Fund may be required to sell portfolio securities to obtain the cash needed to distribute redemption proceeds. This may cause the Fund to recognize investment income and/or capital gains or losses that it might not have recognized if it had completely satisfied the redemption in-kind. As a result, the Fund may be less tax efficient if it includes such a cash payment than if the in-kind redemption process was used exclusively. In addition, cash redemptions may incur higher brokerage costs than in-kind redemptions and these added costs may be borne by the Fund and negatively impact Fund performance. You should consult your tax advisor as to the tax consequences of purchasing, owning, and selling Shares.
- **U.S. Treasury Obligations Risk.** U.S. Treasury obligations may differ from other fixed income securities in their interest rates, maturities, times of issuance and other characteristics. Similar to other issuers, changes to the financial condition or credit rating of the U.S. government may cause the value of the Fund’s U.S. Treasury obligations to decline.

Performance

The Fund is new and therefore does not have a performance history for a full calendar year. In the future, performance information for the Fund will be presented in this section. Updated performance information is available on the Fund's website at www.true-shares.com or by calling the Fund toll free at 1-800-617-0004.

Management

Investment Adviser

TrueMark Investments, LLC serves as investment adviser to the Fund.

Sub-Adviser

SpiderRock Advisors, LLC serves as investment sub-adviser to the Fund

Portfolio Managers

Jordan C. Waldrep, CFA, Chief Investment Officer for the Adviser, Eric Metz, Chief Investment Officer for the Sub-Adviser and Fred Sloneker, Portfolio Manager for the Sub-Adviser, have been portfolio managers of the Fund since its inception in 2020.

Purchase and Sale of Shares

Shares are listed on the Exchange, and most investors will buy and sell Shares through brokers at market prices, rather than NAV. Because Shares trade at market prices rather than NAV, Shares may trade at a price greater than NAV (premium) or less than NAV (discount). The Fund issues and redeems Shares at NAV only in large blocks known as "Creation Units," which only APs (typically, broker-dealers) may purchase or redeem. Creation Units of the Fund generally consist of at least 25,000 Shares, though this may change from time to time. The Fund generally issues and redeems Creation Units in exchange for a portfolio of securities closely approximating the holdings of the Fund (the "Deposit Securities") and/or a designated amount of cash.

Tax Information

Fund distributions are generally taxable as ordinary income, qualified dividend income, or capital gains (or a combination), unless your investment is in an individual retirement account ("IRA") or other tax-advantaged account. Distributions on investments made through tax-deferred arrangements may be taxed later upon withdrawal of assets from those accounts.

Financial Intermediary Compensation

If you purchase Shares through a broker-dealer or other financial intermediary (such as a bank) (an "Intermediary"), the Adviser or its affiliates may pay Intermediaries for certain activities related to the Fund, including participation in activities that are designed to make Intermediaries more knowledgeable about exchange traded products, including the Fund, or for other activities, such as marketing, educational training or other initiatives related to the sale or promotion of Shares. These payments may create a conflict of interest by influencing the Intermediary and your salesperson to recommend the Fund over another investment. Any such arrangements do not result in increased Fund expenses. Ask your salesperson or visit the Intermediary's website for more information.

ADDITIONAL INFORMATION ABOUT THE FUNDS

Investment Objective

Each Fund's investment objective has been adopted as a non-fundamental investment policy and may be changed without shareholder approval upon written notice to shareholders.

Additional Information About Each Fund

Any FLEX Options that are written by a Fund that create an obligation to sell or buy the value of the S&P 500 Price Index will be fully offset by FLEX Options purchased by the Fund that create the right to buy or sell the value of the S&P 500 Price Index such that each Fund will always be in a net long position (*i.e.*, any obligations of a Fund created by its writing of FLEX Options will be fully covered by offsetting positions in other purchased FLEX Options).

Additional Information About Each Fund's Principal Investment Strategy

A Fund's ability to implement the buffer protection options strategy against the first 8% to 12% decline in the value of the S&P 500 Price Index is generally dependent on shareholders purchasing Shares at a price equal to their net asset value on the Initial Investment Day and holding them until the last day of the Investment Period for the applicable Fund. The price at which you will be able to purchase Shares on an Initial Investment Day may be higher or lower than net asset value. You may realize a gain or loss that is higher or lower than the intended gains or losses as a result of purchasing Shares on an Initial Investment Day, selling Shares prior to the last day of the Investment Period for the applicable Fund, in instances where options are otherwise terminated by the applicable Fund prior to expiration, if the applicable Fund is unable to maintain the proportional relationship of the options based on the number of option contracts in the Fund's portfolio, or because of the fees and expenses of the applicable Fund.

Each Fund will purchase call options and sell (write) put options on the S&P 500 Price Index or an ETF that tracks the S&P 500 Price Index.

The following chart illustrates the hypothetical returns that each Fund seeks to provide in certain illustrative scenarios for a shareholder that purchases Fund shares on the Initial Investment Day and holds such shares for the entire Investment Period. This chart does not take into account payment by a Fund of fees and expenses. **There is no guarantee that a Fund will be successful in providing these investment outcomes for any Investment Period.**

S&P 500 Price Index	Fund Return	Return on \$1MM Invested
-40%	-29.22%	\$(292,200)
-30%	-19.22%	\$(192,200)
-20%	-9.22%	\$ (92,200)
-10%	0.04%	\$ 400
0%	0.04%	\$ 400
10%	7.54%	\$ 75,400
20%	15.04%	\$ 150,400
30%	22.54%	\$ 225,400
40%	30.04%	\$ 300,400

- For the purposes of this example, the combination of the short put and long call produce a 10% protective buffer, where the call is the top end of the buffer and the put is the bottom end. The payoff at expiration will compensate for losses experienced by the S&P 500 (if any), in an amount not to exceed 10%.
- The long call creates an uncapped growth opportunity equal to a proportion of the return of the price of the S&P 500. This 'upside capture' will generally be in the range of 60-80% of the price of the S&P 500.

There is no assurance that a Fund will achieve its investment objective.

Additional Information About Each Fund's Principal Risks

An investment in a Fund entails risks. A Fund could lose money, or its performance could trail that of other investment alternatives. The following provides additional information about the Funds' principal risks. It is important that investors closely review and understand

these risks before making an investment in a Fund. Each risk applies to each Fund unless otherwise specified. Just as in each Fund's summary section above, the principal risks below are presented in alphabetical order to facilitate finding particular risks and comparing them with those of other funds. Each risk summarized below is considered a "principal risk" of investing in the applicable Fund, regardless of the order in which it appears.

- **Buffered Strategy Investment Risk.**

- *Buffered Loss Risk.* There can be no guarantee that the Fund will be successful in its strategy to provide buffer protection against S&P 500 Price Index losses if the S&P 500 Price Index decreases over the Investment Period by 8% or less. A shareholder may lose their entire investment. The Fund's strategy seeks to deliver returns that match the S&P 500 Price Index (but will be less than the S&P 500 Price Index due to the cost of the options used by the Fund), while limiting downside losses, if Shares are bought on the day on which the Fund enters into the options and held until those options expire at the end of each Investment Period. In the event an investor purchases Shares after the date on which the options were entered into or sells Shares prior to the expiration of the options, the buffer that the Fund seeks to provide may not be available. The Fund does not provide principal protection and an investor may experience significant losses on its investment, including the loss of its entire investment.
 - *FLEX Options Risk.* The Fund may invest in FLEX Options issued and guaranteed for settlement by the OCC. The Fund bears the risk that the OCC will be unable or unwilling to perform its obligations under the FLEX Options contracts. Additionally, FLEX Options may be illiquid, and in such cases, the Fund may have difficulty closing out certain FLEX Options positions at desired times and prices.
 - *Options Risk.* The Fund invests in options that derive their performance from the performance of the S&P 500 Price Index. Writing and buying options are speculative activities and entail investment exposures that are greater than their cost would suggest, meaning that a small investment in an option could have a substantial impact on the performance of the Fund. The Fund's use of call and put options can lead to losses because of adverse movements in the price or value of the underlying stock, index, or other asset, which may be magnified by certain features of the options. These risks are heightened when the Fund's portfolio managers use options to enhance the Fund's return or as a substitute for a position or security. When selling a call or put option, the Fund will receive a premium; however, this premium may not be enough to offset a loss incurred by the Fund if the price of the underlying asset is above or below, respectively, the strike price by an amount equal to or greater than the premium. The value of an option may be adversely affected if the market for the option becomes less liquid or smaller, and will be affected by changes in the value or yield of the option's underlying asset, an increase in interest rates, a change in the actual or perceived volatility of the stock market or the underlying asset and the remaining time to expiration. Additionally, the value of an option does not increase or decrease at the same rate as the underlying asset(s). The Fund's use of options, due to the cost of the options, will reduce the Fund's ability to get returns equal to the S&P 500 Price Index. This means that if the S&P 500 Price Index experiences gains for an Investment Period, the Fund will not benefit to the same extent from those gains. In addition, if the price of the underlying asset of an option is above the strike price of a written call option or below the strike price for a written put option, the value of the option, and consequently of the Fund, may decline significantly more than if the Fund invested directly in the underlying asset instead of using options. The Fund invests in options that derive their performance from the performance of the S&P 500 Price Index and can be volatile and involve various types and degrees of risks. The Fund could experience a loss if its options do not perform as anticipated, or are not correlated with the performance of their underlying stock or if the Fund is unable to purchase or liquidate a position because of an illiquid secondary market.
 - *Purchase and Sale Timing Risk.* The Fund is designed to protect against the first 8% to 12% decline in the value of the S&P 500 Price Index and provide for participation in any gains, although not to the same extent, as the value of the S&P 500 Price Index, for a 12-month period from one Roll Date to the next Roll Date. Because the options purchased and written by the Fund will expire on the next Roll Date, if you purchase or sell Shares on a date other than a Roll Date or if you hold Shares for more or less than the time from the most recent Roll Date to the next Roll Date, the value of your investment in Shares may not be protected against the first 8% to 12% decline in the value of the S&P 500 Price Index and may not participate in a gain in the value of the S&P 500 Price Index for your investment period. The value of the options purchased and written by the Fund is dependent on, among other factors, the value, implied volatility, and implied dividend rate of the S&P 500 Price Index and interest rates, any or all of which may vary, sometimes significantly, during the period from the most recent Roll Date to the next Roll Date. Consequently, the value of the Fund may not directly track changes in the value of the S&P 500 Price Index in between Roll Dates.
- **Equity Market Risk.** The Fund invests in options that derive their performance from the S&P 500 Price Index, which is made up of common stocks. Common stocks are susceptible to general stock market fluctuations and to volatile increases and decreases in value as market confidence in and perceptions of their issuers change. These investor perceptions are based on various and unpredictable factors including: expectations regarding government, economic, monetary and fiscal policies; inflation and interest rates; economic expansion or contraction; and global or regional political, economic and banking crises. Common stocks generally expose their holder to greater risk than preferred stocks and debt obligations of the issuer because common stockholders, or

holders of equivalent interests, generally have inferior rights to receive payments from issuers in comparison with the rights of preferred stockholders, bondholders, and other creditors of such issuers.

Beginning in the first quarter of 2020, financial markets in the United States and around the world experienced extreme and in many cases unprecedented volatility and severe losses due to the global pandemic caused by COVID-19, a novel coronavirus. The pandemic has resulted in a wide range of social and economic disruptions, including closed borders, voluntary or compelled quarantines of large populations, stressed healthcare systems, reduced or prohibited domestic or international travel, supply chain disruptions, and so-called “stay-at-home” orders throughout much of the United States and many other countries. The fallout from these disruptions has included the rapid closure of businesses deemed “non-essential” by federal, state, or local governments and rapidly increasing unemployment, as well as greatly reduced liquidity for certain instruments at times. Some sectors of the economy and individual issuers have experienced particularly large losses. Such disruptions may continue for an extended period of time or reoccur in the future to a similar or greater extent. In response, the U.S. government and the Federal Reserve have taken extraordinary actions to support the domestic economy and financial markets, resulting in very low interest rates and in some cases negative yields. It is unknown how long circumstances related to the pandemic will persist, whether they will reoccur in the future, whether efforts to support the economy and financial markets will be successful, and what additional implications may follow from the pandemic. The impact of these events and other epidemics or pandemics in the future could adversely affect Fund performance.

- **ETF Risks.** The Fund is an ETF and, as a result of that structure, it is exposed to the following risks:
 - *APs, Market Makers, and Liquidity Providers Concentration Risk.* The Fund has a limited number of financial institutions that may act as APs. In addition, there may be a limited number of market makers and/or liquidity providers in the marketplace. To the extent either of the following events occur, Shares may trade at a material discount to NAV and possibly face delisting: (i) APs exit the business or otherwise become unable to process creation and/or redemption orders and no other APs step forward to perform these services, or (ii) market makers and/or liquidity providers exit the business or significantly reduce their business activities and no other entities step forward to perform their functions.
 - *Costs of Buying or Selling Shares.* Investors buying or selling Shares in the secondary market will pay brokerage commissions or other charges imposed by brokers, as determined by that broker. Brokerage commissions are often a fixed amount and may be a significant proportional cost for investors seeking to buy or sell relatively small amounts of Shares. In addition, secondary market investors will also incur the cost of the difference between the price at which an investor is willing to buy Shares (the “bid” price) and the price at which an investor is willing to sell Shares (the “ask” price). This difference in bid and ask prices is often referred to as the “spread” or “bid/ask spread.” The bid/ask spread varies over time for Shares based on trading volume and market liquidity, and is generally lower if Shares have more trading volume and market liquidity and higher if Shares have little trading volume and market liquidity. Further, a relatively small investor base in the Fund, asset swings in the Fund, and/or increased market volatility may cause increased bid/ask spreads. Due to the costs of buying or selling Shares, including bid/ask spreads, frequent trading of Shares may significantly reduce investment results and an investment in Shares may not be advisable for investors who anticipate regularly making small investments.
 - *Shares May Trade at Prices Other Than NAV.* As with all ETFs, Shares may be bought and sold in the secondary market at market prices. Although it is expected that the market price of Shares will approximate the Fund’s NAV, there may be times when the market price of Shares is more than the NAV intra-day (premium) or less than the NAV intra-day (discount) due to supply and demand of Shares or during periods of market volatility. This risk is heightened in times of market volatility, periods of steep market declines, and periods when there is limited trading activity for Shares in the secondary market, in which case such premiums or discounts may be significant. The market price of Shares during the trading day, like the price of any exchange-traded security, includes a “bid/ask” spread charged by the exchange specialist, market makers or other participants that trade Shares. In times of severe market disruption, the bid/ask spread can increase significantly. At those times, Shares are most likely to be traded at a discount to NAV, and the discount is likely to be greatest when the price of Shares is falling fastest, which may be the time that you most want to sell your Shares. The Adviser and Sub-Adviser believe that, under normal market conditions, large market price discounts or premiums to NAV will not be sustained because of arbitrage opportunities.
 - *Trading.* Although Shares are listed for trading on the Exchange and may be listed or traded on U.S. and non-U.S. stock exchanges other than the Exchange, there can be no assurance that an active trading market for such Shares will develop or be maintained. Trading in Shares may be halted due to market conditions or for reasons that, in the view of the Exchange, make trading in Shares inadvisable. In addition, trading in Shares on the Exchange is subject to trading halts caused by extraordinary market volatility pursuant to Exchange “circuit breaker” rules, which temporarily halt trading on the Exchange when a decline in the S&P 500 Index during a single day reaches certain thresholds (e.g., 7%, 13%, and 20%). Additional rules applicable to the Exchange may halt trading in Shares when extraordinary volatility causes sudden, significant swings in the market price of Shares. There can be no assurance that Shares will trade with any volume, or at all, on any stock exchange. In stressed market conditions, the liquidity of Shares may begin to mirror the liquidity of the Fund’s underlying portfolio holdings, which can be significantly less liquid than Shares.

- **Management Risk.** The Fund is actively-managed and may not meet its investment objective based on the investment Adviser's and Sub-Adviser's success or failure to implement investment strategies for the Fund.
- **New Fund Risk.** The Fund is a recently organized, non-diversified management investment company with no operating history. As a result, prospective investors have no track record or history on which to base their investment decision.
- **Non-Diversification Risk.** Although the Fund intends to invest in a variety of securities and instruments, the Fund will be considered to be non-diversified, which means that it may invest more of its assets in the securities of a single issuer or a smaller number of issuers than if it were a diversified fund. As a result, the Fund may be more exposed to the risks associated with and developments affecting an individual issuer or a smaller number of issuers than a fund that invests more widely. This may increase the Fund's volatility and cause the performance of a relatively smaller number of issuers to have a greater impact on the Fund's performance. However, the Fund intends to satisfy the asset diversification requirements for qualification as a RIC under Subchapter M of the Code.
- **Portfolio Turnover Risk.** Because the Fund may "turn over" some or all of its options as frequently as monthly, the Fund may incur high levels of transaction costs from commissions or mark-ups in the bid/offer spread. Higher portfolio turnover may result in the Fund paying higher levels of transaction costs and generating greater tax liabilities for shareholders. Portfolio turnover risk may cause the Fund's performance to be less than you expect. While the turnover of the call options is not deemed "portfolio turnover" for accounting purposes, the economic impact to the Fund is similar to what could occur if the Fund experienced high portfolio turnover (*e.g.*, in excess of 100% per year).
- **Tax Efficiency Risk.** A significant portion of income received from the Fund may be subject to tax at effective tax rates that are higher than the rates that would apply if the Fund were to engage in a different investment strategy. Additionally, the Fund's investment strategy may require it to effect redemptions, in whole or in part, for cash. As a result, the Fund may be required to sell portfolio securities to obtain the cash needed to distribute redemption proceeds. This may cause the Fund to recognize investment income and/or capital gains or losses that it might not have recognized if it had completely satisfied the redemption in-kind. As a result, the Fund may be less tax efficient if it includes such a cash payment than if the in-kind redemption process was used exclusively. In addition, cash redemptions may incur higher brokerage costs than in-kind redemptions and these added costs may be borne by the Fund and negatively impact Fund performance. You should consult your tax advisor as to the tax consequences of purchasing, owning, and selling Shares.
- **U.S. Treasury Obligations Risk.** U.S. Treasury obligations may differ from other fixed income securities in their interest rates, maturities, times of issuance and other characteristics. Similar to other issuers, changes to the financial condition or credit rating of the U.S. government may cause the value of the Fund's U.S. Treasury obligations to decline. The total public debt of the United States as a percentage of gross domestic product has grown rapidly since the beginning of the 2008 financial downturn and is expected to rise even further as the U.S. government implements crisis-fighting efforts in response to the COVID-19 outbreak. Although high debt levels do not necessarily indicate or cause economic problems, they may create certain systemic risks if sound debt management practices are not implemented. A high national debt level may increase market pressures to meet government funding needs, which may drive debt cost higher and cause a country to sell additional debt, thereby increasing refinancing risk. A high national debt also raises concerns that a government will not be able to make principal or interest payments when they are due. In the worst case, unsustainable debt levels can cause a decline in the value of the dollar (which may lead to inflation), and can prevent the U.S. government from implementing effective counter-cyclical fiscal policy in economic downturns. U.S. Treasury securities are currently given the top rating by all major ratings agencies except Standard & Poor's Ratings Services, which rates them AA+, one grade below their top rating. Since downgrading U.S. Treasury securities from AAA to AA+ in 2011, Standard & Poor's Ratings Services has affirmed its rating. A downgrade of the ratings of U.S. government debt obligations, such as U.S. Treasury obligations, which are often used as a benchmark for other borrowing arrangements, could result in higher interest rates for individual and corporate borrowers, cause disruptions in the international bond markets and have a substantial negative effect on the U.S. economy. A downgrade of U.S. Treasury securities from another ratings agency or a further downgrade below AA+ rating by Standard & Poor's Ratings Services may cause the value of a Fund's U.S. Treasury obligations to decline.

In response to the outbreak of COVID-19, as with other serious economic disruptions, governmental authorities and regulators are enacting significant fiscal and monetary policy changes, including providing direct capital infusions into companies, creating new monetary programs and lowering interest rates considerably. These actions present heightened risks to fixed-income and debt instruments, and such risks could be even further heightened if these actions are unexpectedly or suddenly reversed or are ineffective in achieving their desired outcomes. In light of these actions and current conditions, interest rates and bond yields in the United States and many other countries are at or near historic lows, and in some cases, such rates and yields are negative, magnifying interest rate risk and diminishing yield and performance. The current environment has also caused volatility and illiquidity in the markets. In particular, in March 2020, the COVID-19 crisis triggered a short period of heavy investor demand for trading in U.S. Treasury obligations, leading to reduced liquidity in the Treasuries market during that period.

PORTFOLIO HOLDINGS INFORMATION

Information about each Fund's daily portfolio holdings is available at www.true-shares.com. A complete description of the Funds' policies and procedures with respect to the disclosure of the Funds' portfolio holdings is available in the Funds' Statement of Additional Information ("SAI").

MANAGEMENT

Investment Adviser

TrueMark Investments, LLC, a Delaware limited liability company located at 9450 W. Bryn Mawr, Rosemont, Illinois 60018, serves as the investment adviser for each Fund. TrueMark, subject to the oversight of the Board, provides an investment management program for each Fund and co-manages the day-to-day investment of the Funds' assets. TrueMark also arranges for transfer agency, custody, fund administration, distribution and all other services necessary for each Fund to operate. TrueMark is an SEC-registered investment adviser. As of March 30, 2020, TrueMark had approximately \$2.3 million in assets under management.

The Adviser continuously reviews, supervises, and administers each Fund's investment program. In particular, the Adviser provides investment and operational oversight of the Sub-Adviser. The Board supervises the Adviser and establishes policies that the Adviser must follow in its day-to-day management activities. For the services it provides to the Funds, TrueMark is entitled to a unified management fee, which is calculated daily and paid monthly, at an annual rate of 0.79% of each Fund's average daily net assets.

Pursuant to an investment advisory agreement between the Trust, on behalf of each Fund, and TrueMark (the "Advisory Agreement"), TrueMark has agreed to pay all expenses of the Funds except the fee payable to TrueMark under the Advisory Agreement, interest charges on any borrowings, dividends, and other expenses on securities sold short, taxes, brokerage commissions and other expenses incurred in placing orders for the purchase and sale of securities and other investment instruments, acquired fund fees and expenses, accrued deferred tax liability, extraordinary expenses, and distribution (12b-1) fees and expenses (if any). TrueMark, in turn, compensates the Sub-Adviser from the management fee it receives.

The basis for the Board's approval of the Advisory Agreement will be available in the Funds' first Annual or Semi-Annual Report to Shareholders.

Sub-Adviser

SpiderRock Advisors, LLC, an Illinois limited liability company located at 300 South Riverside Plaza, Suite 2340, Chicago, IL 60606, co-manages the day-to-day investment of the Funds' assets. An SEC-registered investment adviser formed in 2014, the Sub-Adviser is majority owned by Eric Metz. As of March 30, 2020, SpiderRock had approximately \$1.2 billion in assets under management.

SpiderRock is responsible for trading portfolio securities for the Funds, including selecting broker-dealers to execute purchase and sale transactions, subject to the supervision of the Adviser and the Board. For its services, the Sub-Adviser is entitled to a fee by the Adviser, which fee is calculated daily and paid monthly, at an annual rate of 0.34% based on the first \$150 million in average daily net assets of each Fund and 0.39% for over \$150 million in average daily net assets of each Fund.

The basis for the Board's approval of the Advisory Agreement will be available in the Funds' first Annual or Semi-Annual Report to Shareholders.

Portfolio Managers

Each Fund is managed on a day-to-day basis by Jordan Waldrep of TrueMark and Eric Metz and Fred Sloneker of SpiderRock.

Jordan Waldrep brings over 15 years of investment experience to TrueMark. Previously, Mr. Waldrep was the Senior Portfolio Manager of the Vice President and Co-Portfolio Manager of the Navigator Fund at USA Mutuals. Before managing public mutual funds, Mr. Waldrep was a founder and principal at Blackfin Capital acting as the portfolio manager of two equity portfolios focused on delivering lower volatility equity returns to investors. Prior to that, he was a principal at Hourglass Capital where he was responsible for research in the Health Care and Information Technology sectors for a long/short hedge fund and several equity portfolios. Mr. Waldrep received his MBA in Finance from the University of Texas, McCombs School of Business in 2004 and his bachelor's degree in Biology and History from Texas A&M University in 1999. Mr. Waldrep is also a Chartered Financial Analyst.

Eric Metz oversees all investment strategies and portfolio management activities at SpiderRock. Prior to joining SpiderRock, Mr. Metz was the Derivatives Strategist and Portfolio Manager at RiverNorth Capital Management, managing both mutual fund and hedge fund assets. He began his career with the Chicago Trading Company on the floors of the Chicago Mercantile Exchange (CME) and the Chicago Board Options Exchange (CBOE). After his time on the trading floors, Mr. Metz was a senior trader and partner at Ronin Capital and Bengal Capital, both proprietary trading firms specializing in volatility arbitrage. Mr. Metz graduated, Magna Cum Laude, from the University of Michigan with a BSE in Industrial and Operations Engineering. He earned his MSE, with honors, in Industrial and Operational Engineering, and was enrolled in the program's PhD program. Mr. Metz is a Chartered Financial Analyst, a member of the CFA Institute, the CFA Society of Chicago and a board member of the OIC Institutional Advisory Council.

Fred Sloneker joined SpiderRock Advisors in 2019 and serves as portfolio manager. Prior to joining SRA, Mr. Sloneker was the Head Quantitative Trader for a series of SpiderRock trading subsidiaries. He began his career as a Trader and Portfolio Manager for hedge

funds JMG Triton Offshore and St. Claire Capital Management in San Francisco, specializing in a broad variety of convertible arbitrage strategies. He later created and managed a volatility strategy for Toronto Dominion (TD) Securities. Mr. Sloneker graduated from the California Institute of Technology (Caltech) with a B.S. in Economics.

The Funds' SAI provides additional information about the Portfolio Managers' compensation structure, other accounts managed by the Portfolio Managers, and the Portfolio Managers' ownership of Shares.

Other Service Providers

Forside Fund Services, LLC (the "Distributor") is the principal underwriter and distributor of each Fund's shares. The Distributor's principal address is Three Canal Street, Suite 100, Portland, ME 04101. The Distributor will not distribute shares in less than whole Creation Units, and it does not maintain a secondary market in the shares. The Distributor is a broker-dealer registered under the Securities Exchange Act of 1934 and a member of the Financial Industry Regulatory Authority, Inc. ("FINRA"). The Distributor has no role in determining the policies of the Funds or the securities that are purchased or sold by the Funds and is not affiliated with the Adviser or any of their respective affiliates.

U.S. Bancorp Fund Services, LLC, doing business as U.S. Bank Global Fund Services, located at 615 East Michigan Street, Milwaukee, Wisconsin 53202, serves as the administrator and transfer agent for the Funds.

U.S. Bank National Association, located at 1555 N. Rivercenter Drive, Milwaukee, Wisconsin 53212, serves as the custodian for the Funds.

Morgan, Lewis & Bockius LLP, located at 1111 Pennsylvania Avenue, N.W., Washington, D.C. 20004, serves as legal counsel to the Listed Funds Trust.

Cohen & Company, Ltd., located at 1350 Euclid Avenue, Suite 800, Cleveland, Ohio 44115, serves as the Funds' independent registered public accounting firm. The independent registered public accounting firm is responsible for auditing the annual financial statements of the Funds.

HOW TO BUY AND SELL SHARES

Each Fund issues and redeems Shares at NAV only in Creation Units. Only APs may acquire Shares directly from a Fund, and only APs may tender their Shares for redemption directly to a Fund, at NAV. APs must be (i) a broker-dealer or other participant in the clearing process through the Continuous Net Settlement System of the NSCC, a clearing agency that is registered with the SEC; or (ii) a DTC participant (as discussed below). In addition, each AP must execute a Participant Agreement with the Distributor, and that has been accepted by the Transfer Agent, with respect to purchases and redemptions of Creation Units. Once created, Shares trade in the secondary market in quantities less than a Creation Unit.

Most investors buy and sell Shares in secondary market transactions through brokers. Shares are listed for trading on the secondary market on the Exchange and can be bought and sold throughout the trading day like other publicly traded securities.

When buying or selling Shares through a broker, you will incur customary brokerage commissions and charges, and you may pay some or all of the spread between the bid and the offer price in the secondary market on each leg of a round trip (purchase and sale) transaction. In addition, because secondary market transactions occur at market prices, you may pay more than NAV when you buy Shares, and receive less than NAV when you sell those Shares.

Book Entry

Shares are held in book-entry form, which means that no stock certificates are issued. The Depository Trust Company ("DTC") or its nominee is the record owner of all outstanding Shares.

Investors owning Shares are beneficial owners as shown on the records of DTC or its participants. DTC serves as the securities depository for all Shares. DTC's participants include securities brokers and dealers, banks, trust companies, clearing corporations and other institutions that directly or indirectly maintain a custodial relationship with DTC. As a beneficial owner of Shares, you are not entitled to receive physical delivery of stock certificates or to have Shares registered in your name, and you are not considered a registered owner of Shares. Therefore, to exercise any right as an owner of Shares, you must rely upon the procedures of DTC and its participants. These procedures are the same as those that apply to any other securities that you hold in book entry or "street name" through your brokerage account.

Share Trading Prices on the Exchange

Trading prices of Shares on the Exchange may differ from the applicable Fund's daily NAV. Market forces of supply and demand, economic conditions and other factors may affect the trading prices of Shares. To provide additional information regarding the indicative value of Shares, the Exchange or a market data vendor disseminates information every 15 seconds through the facilities of the Consolidated Tape Association, or other widely disseminated means, an updated "intraday indicative value" ("IIV") for Shares as calculated by an information provider or market data vendor, which may include the Adviser or an affiliate. The Funds are not involved in or responsible for any aspect of the calculation or dissemination of the IIVs and make no representation or warranty as to the accuracy of the IIVs. If the calculation

of an IIV is based on the basket of Deposit Securities, such IIV may not represent the best possible valuation of the applicable Fund's portfolio because the basket of Deposit Securities does not necessarily reflect the precise composition of the current Fund portfolio at a particular point in time. The IIVs should not be viewed as a "real-time" update of the Funds' NAVs because the IIVs may not be calculated in the same manner as the NAVs, which are computed only once a day, typically at the end of the business day. Each IIV is generally determined by using both current market quotations and/or price quotations obtained from broker-dealers that may trade in the Deposit Securities.

Frequent Purchases and Redemptions of Shares

The Funds impose no restrictions on the frequency of purchases and redemptions of Shares. In determining not to approve a written, established policy, the Board evaluated the risks of market timing activities by Fund shareholders. Purchases and redemptions by APs, who are the only parties that may purchase or redeem Shares directly with the Funds, are an essential part of the ETF process and help keep Share trading prices in line with NAV. As such, the Funds accommodate frequent purchases and redemptions by APs. However, the Board has also determined that frequent purchases and redemptions for cash may increase tracking error and portfolio transaction costs and may lead to the realization of capital gains. To minimize these potential consequences of frequent purchases and redemptions, the Funds employ fair value pricing and may impose transaction fees on purchases and redemptions of Creation Units to cover the custodial and other costs incurred by the Funds in effecting trades. In addition, the Funds and the Adviser reserve the right to reject any purchase order at any time.

Determination of NAV

Each Fund's NAV is calculated as of the scheduled close of regular trading on the New York Stock Exchange ("NYSE"), generally 4:00 p.m. Eastern Time, each day the NYSE is open for business. The NAV for a Fund is calculated by dividing the applicable Fund's net assets by its Shares outstanding.

FLEX Options are valued by Cboe, which uses an equity option valuation model. The factors used in the option pricing model include the calculated volatility value of the custom option and the underlying reference asset, the time between the effective date of the option and its expiration, and the agreed upon strike price. All inputs used by the pricing service in valuing the FLEX Options are considered observable market inputs, as a market for the custom options is established by the clearinghouse as new FLEX Options are created. Fair value determinations may be required for a FLEX Option in the event a price cannot be obtained from an independent pricing service or, in the judgment of the Adviser, the price or value available does not represent the fair value of the instrument. Such fair value determinations will be made under guidelines established by the Board (as described below).

In calculating its NAV, each Fund generally values its assets on the basis of market quotations, last sale prices, or estimates of value furnished by a pricing service or brokers who make markets in such instruments. If such information is not available for a security held by a Fund or is determined to be unreliable, the security will be valued at fair value estimates under guidelines established by the Board (as described below).

Fair Value Pricing

The Board has adopted procedures and methodologies to fair value Fund securities whose market prices are not "readily available" or are deemed to be unreliable. For example, such circumstances may arise when: (i) a security has been de-listed or has had its trading halted or suspended; (ii) a security's primary pricing source is unable or unwilling to provide a price; (iii) a security's primary trading market is closed during regular market hours; or (iv) a security's value is materially affected by events occurring after the close of the security's primary trading market. Generally, when fair valuing a security, the Funds will take into account all reasonably available information that may be relevant to a particular valuation including, but not limited to, fundamental analytical data regarding the issuer, information relating to the issuer's business, recent trades or offers of the security, general and/or specific market conditions and the specific facts giving rise to the need to fair value the security. Fair value determinations are made in good faith and in accordance with the fair value methodologies included in the Board-adopted valuation procedures. Due to the subjective and variable nature of fair value pricing, there can be no assurance that the Adviser will be able to obtain the fair value assigned to the security upon the sale of such security.

Investments by Registered Investment Companies

Section 12(d)(1) of the 1940 Act restricts investments by registered investment companies in the securities of other investment companies, including Shares. Registered investment companies are permitted to invest in the Funds beyond the limits set forth in section 12(d)(1), subject to certain terms and conditions set forth in an SEC exemptive order issued to the Adviser, including that such investment companies enter into an agreement with the Funds.

DIVIDENDS, DISTRIBUTIONS, AND TAXES

Dividends and Distributions

Each Fund intends to pay out dividends, if any, and distribute any net realized capital gains to its shareholders at least annually. Each Fund will declare and pay capital gain distributions, if any, in cash. Distributions in cash may be reinvested automatically in additional whole Shares only if the broker through whom you purchased Shares makes such option available. Your broker is responsible for distributing the income and capital gain distributions to you.

Taxes

The following discussion is a summary of some important U.S. federal income tax considerations generally applicable to investments in the Funds. Your investment in a Fund may have other tax implications. Please consult your tax advisor about the tax consequences of an investment in Shares, including the possible application of foreign, state, and local tax laws.

Each Fund intends to qualify each year for treatment as a RIC. If it meets certain minimum distribution requirements, a RIC is not subject to tax at the fund level on income and gains from investments that are timely distributed to shareholders. However, a Fund's failure to qualify as a RIC or to meet minimum distribution requirements would result (if certain relief provisions were not available) in fund-level taxation and, consequently, a reduction in income available for distribution to shareholders.

Unless your investment in Shares is made through a tax-exempt entity or tax-advantaged account, such as an IRA plan, you need to be aware of the possible tax consequences when a Fund makes distributions, when you sell your Shares listed on the Exchange, and when you purchase or redeem Creation Units (institutional investors only).

Tax Treatment of the Options

A Fund's investments in offsetting positions with respect to the S&P 500 Price Index may be considered "straddles" for U.S. federal income tax purposes. The straddle rules may affect the character of gains (or losses) realized by a Fund, and losses realized by a Fund on positions that are part of a straddle may be deferred under the straddle rules, rather than being taken into account in calculating taxable income for the taxable year in which the losses are realized. In addition, certain carrying charges (including interest expense) associated with positions in a straddle may be required to be capitalized rather than deducted currently. Certain elections that a Fund may make with respect to its straddle positions may also affect the amount, character and timing of the recognition of gains or losses from the affected positions.

The tax consequences of straddle transactions to a Fund are not entirely clear in all situations under currently available authority. The straddle rules may increase the amount of short-term capital gain realized by a Fund, which is taxed as ordinary income when distributed to U.S. shareholders in a non-liquidating distribution. Because application of the straddle rules may affect the character of gains or losses, defer losses and/or accelerate the recognition of gains or losses from the affected straddle positions, if a Fund makes a non-liquidating distribution of its short-term capital gain, the amount which must be distributed to U.S. shareholders as ordinary income may be increased or decreased substantially as compared to a Fund that did not engage in such transactions.

The FLEX Options included in the Funds' portfolios are exchange-traded options. Under Section 1256 of the Code, certain types of exchange-traded options are treated as if they were sold (*i.e.*, "marked to market") at the end of each year. Gain or loss is recognized on this deemed sale. Such treatment could cause a Fund to have taxable income without receiving cash. In order to maintain its RIC qualification, a Fund must distribute at least 90% of its income annually. If the Options are subject to Section 1256 of the Code and a Fund is unable to distribute marked-to-market gains to its shareholders, the Fund may lose its RIC qualification and be taxed as a regular corporation. On the other hand, positions that are subject to the Section 1256 mark-to-market rules statutorily produce gain or loss that is 60% long-term capital gain and 40% short-term capital gain. In addition, offsetting positions that are both subject to Section 1256 are not subject to the straddle rules discussed above. Thus, positions subject to Section 1256 may force a Fund to make increased distributions, but also increase the amount of long-term capital gain recognized as compared to positions subject to the straddle rules.

Taxes on Distributions

Each Fund intends to distribute, at least annually, substantially all of its net investment income and net capital gains income. For federal income tax purposes, distributions of investment income are generally taxable as ordinary income or qualified dividend income. A portion of dividends received from a Fund (but none of a Fund's capital gain distributions) may qualify for the dividends-received deduction for corporations. Taxes on distributions of capital gains (if any) are determined by how long a Fund owned the investments that generated them, rather than how long a shareholder has owned his or her Shares. Sales of assets held by a Fund for more than one year generally result in long-term capital gains and losses, and sales of assets held by a Fund for one year or less generally result in short-term capital gains and losses. Distributions of a Fund's net capital gain (the excess of net long-term capital gains over net short-term capital losses) that are reported by such Fund as capital gain dividends ("Capital Gain Dividends") will be taxable as long-term capital gains, which for non-corporate shareholders are subject to tax at reduced rates of up to 20% (lower rates apply to individuals in lower tax brackets). Distributions of short-term capital gain will generally be taxable as ordinary income. Dividends and distributions are generally taxable to you whether you receive them in cash or reinvest them in additional shares.

Distributions reported by a Fund as "qualified dividend income" are generally taxed to non-corporate shareholders at rates applicable to long-term capital gains, provided holding period and other requirements are met. "Qualified dividend income" generally is income derived

from dividends paid by U.S. corporations or certain foreign corporations that are either incorporated in a U.S. possession or eligible for tax benefits under certain U.S. income tax treaties. In addition, dividends that the Funds' receive in respect of stock of certain foreign corporations may be qualified dividend income if that stock is readily tradable on an established U.S. securities market. Corporate shareholders may be entitled to a dividends-received deduction for the portion of dividends they receive from a Fund that are attributable to dividends received by the Funds from U.S. corporations, subject to certain limitations. A Fund's option strategy may prevent its income from being eligible for treatment as qualified dividend income in the hands of non-corporate shareholders or eligible for the dividends received deduction for corporate shareholders.

The determination of the value and the identity of the issuer of certain derivative investments are often unclear for purposes of the "asset test" (described in the section entitled "Federal Income Taxes" in the SAI). Each Fund intends to carefully monitor such investments to ensure that it is adequately diversified under the "asset test." However, there are no assurances that the Internal Revenue Service ("IRS") will agree with the Fund's determination of the "asset test" with respect to such derivatives.

Shortly after the close of each calendar year, you will be informed of the character of any distributions received from a Fund.

U.S. individuals with income exceeding specified thresholds are subject to a 3.8% Medicare contribution tax on all or a portion of their "net investment income," which includes interest, dividends, and certain capital gains (generally including capital gains distributions and capital gains realized on the sale of Shares). This 3.8% tax also applies to all or a portion of the undistributed net investment income of certain shareholders that are estates and trusts.

In general, your distributions are subject to federal income tax for the year in which they are paid. Certain distributions paid in January, however, may be treated as paid on December 31 of the prior year. Distributions are generally taxable even if they are paid from income or gains earned by a Fund before your investment (and thus were included in the Shares' NAV when you purchased your Shares).

You may wish to avoid investing in a Fund shortly before a dividend or other distribution, because such a distribution will generally be taxable even though it may economically represent a return of a portion of your investment.

If you are neither a resident nor a citizen of the United States or if you are a foreign entity, distributions (other than Capital Gain Dividends) paid to you by a Fund will generally be subject to a U.S. withholding tax at the rate of 30%, unless a lower treaty rate applies. A Fund may, under certain circumstances, report all or a portion of a dividend as an "interest-related dividend" or a "short-term capital gain dividend," which would generally be exempt from this 30% U.S. withholding tax, provided certain other requirements are met.

Under legislation generally known as "FATCA" (the Foreign Account Tax Compliance Act), a Fund is required to withhold 30% of certain ordinary dividends it pays to shareholders that are foreign entities and that fail to meet prescribed information reporting or certification requirements.

Each Fund (or a financial intermediary, such as a broker, through which a shareholder owns Shares) generally is required to withhold and remit to the U.S. Treasury a percentage of the taxable distributions and sale or redemption proceeds paid to any shareholder who fails to properly furnish a correct taxpayer identification number, who has underreported dividend or interest income, or who fails to certify that he, she or it is not subject to such withholding.

Taxes When Shares are Sold on the Exchange

Any capital gain or loss realized upon a sale of Shares generally is treated as a long-term capital gain or loss if Shares have been held for more than one year and as a short-term capital gain or loss if Shares have been held for one year or less. However, any capital loss on a sale of Shares held for six months or less is treated as long-term capital loss to the extent of Capital Gain Dividends paid with respect to such Shares. The ability to deduct capital losses may be limited.

Taxes on Purchases and Redemptions of Creation Units

An AP having the U.S. dollar as its functional currency for U.S. federal income tax purposes who exchanges securities for Creation Units generally recognizes a gain or a loss. The gain or loss will be equal to the difference between the value of the Creation Units at the time of the exchange and the exchanging AP's aggregate basis in the securities delivered, plus the amount of any cash paid for the Creation Units. An AP who exchanges Creation Units for securities will generally recognize a gain or loss equal to the difference between the exchanging AP's basis in the Creation Units and the aggregate U.S. dollar market value of the securities received, plus any cash received for such Creation Units. The IRS may assert, however, that a loss that is realized upon an exchange of securities for Creation Units may not be currently deducted under the rules governing "wash sales" (for a person who does not mark-to-market their holdings) or on the basis that there has been no significant change in economic position. Persons exchanging securities should consult their own tax advisor with respect to whether wash sale rules apply and when a loss might be deductible.

Any capital gain or loss realized upon redemption of Creation Units is generally treated as long-term capital gain or loss if Shares have been held for more than one year and as a short-term capital gain or loss if Shares have been held for one year or less.

A Fund may include a payment of cash in addition to, or in place of, the delivery of a basket of securities upon the redemption of Creation Units. A Fund may sell portfolio securities to obtain the cash needed to distribute redemption proceeds. This may cause such Fund to recognize investment income and/or capital gains or losses that it might not have recognized if it had completely satisfied the redemption

in-kind. As a result, the applicable Fund may be less tax efficient if it includes such a cash payment in the proceeds paid upon the redemption of Creation Units.

The Fund may include a payment of cash in addition to, or in place of, the delivery of a basket of securities upon the redemption of Creation Units. The Fund may sell portfolio securities to obtain the cash needed to distribute redemption proceeds. This may cause the Fund to recognize investment income and/or capital gains or losses that it might not have recognized if it had completely satisfied the redemption in-kind. As a result, the Fund may be less tax efficient if it includes such a cash payment in the proceeds paid upon the redemption of Creation Units.

The foregoing discussion summarizes some of the possible consequences under current federal tax law of an investment in the Funds. It is not a substitute for personal tax advice. You also may be subject to state and local tax on Fund distributions and sales of Shares. Consult your personal tax advisor about the potential tax consequences of an investment in Shares under all applicable tax laws. For more information, please see the section entitled "Federal Income Taxes" in the SAI.

DISTRIBUTION PLAN

The Board has adopted a Distribution and Service Plan (the "Plan") pursuant to Rule 12b-1 under the 1940 Act. In accordance with the Plan, each Fund is authorized to pay an amount up to 0.25% of its average daily net assets each year for certain distribution-related activities and shareholder services.

No Rule 12b-1 fees are currently paid by the Funds, and there are no plans to impose these fees. However, in the event Rule 12b-1 fees are charged in the future, because the fees are paid out of a Fund's assets, over time these fees will increase the cost of your investment and may cost you more than certain other types of sales charges.

PREMIUM/DISCOUNT INFORMATION

The Funds are new and therefore do not have any information regarding how often Shares are traded on the Exchange at a price above (*i.e.*, at a premium) or below (*i.e.*, at a discount) the NAV of each Fund.

ADDITIONAL NOTICES

Shares are not sponsored, endorsed, or promoted by the Exchange. The Exchange is not responsible for, nor has it participated in the determination of the timing, prices, or quantities of Shares to be issued, nor in the determination or calculation of the equation by which Shares are redeemable. The Exchange has no obligation or liability to owners of Shares in connection with the administration, marketing, or trading of Shares.

Without limiting any of the foregoing, in no event shall the Exchange have any liability for any lost profits or indirect, punitive, special, or consequential damages even if notified of the possibility thereof.

The Adviser and the Funds make no representation or warranty, express or implied, to the owners of Shares or any member of the public regarding the advisability of investing in securities generally or in the Funds particularly.

FINANCIAL HIGHLIGHTS

The Funds had not commenced operations prior to the date of this Prospectus and therefore do not have financial information.
